ESTRELLA CONNER

The Bookseller
Routledge

With the rise of genomics, the life sciences have entered a new era. This book provides a comprehensive history of molecular genetics and genomics.

Computational Science and Its Applications - ICCSA 2016

Academic Press
How incidentally activated social representations affect subsequent thoughts and behaviors has long interested social psychologists.

Recently, such priming effects have provoked debate and skepticism. Originally a special issue of *Social Cognition*, this book examines the theoretical challenges researchers must overcome to further advance priming studies and considers how these challenges

can be met. The volume aims to reduce the confusion surrounding current discussions by more thoroughly considering the many phenomena in social psychology that the term 'priming' encompasses, and closely examining the psychological processes that explain when and how different types of priming effects occur.

Nature London
Routledge

The contributors investigate policy paradigms and their ability to explain the policy process actors, ideas, discourses and strategies employed to provide readers with a better understanding of public policy and its dynamics.

Remaking Participation MIT

Press
 Longer-term developments shape the present and endogenous futures of institutions and practices of science and technology in society and their governance. Understanding the patterns allows diagnosis and soft intervention, often linked to scenario exercises. The book collects six articles offering key examples of this perspective, addressing ongoing issues in the governance of science and technology, including nanotechnology and responsible research and innovation. And adds two more articles that address background philosophical issues. *American Men and*

Women of Science
 Understanding Priming Effects in Social Psychology
 The book contains a comprehensive selection of outstanding and influential articles on bilingual education in the USA and the rest of the world. It is designed for instructors and students, with questions and activities based on each of the 19 readings for students to engage in active learning.
Advances in Experimental Social Psychology Routledge
 An examination of the uses of data within a changing knowledge infrastructure, offering analysis and case studies from the sciences, social sciences, and humanities. "Big Data"

is on the covers of Science, Nature, the Economist, and Wired magazines, on the front pages of the Wall Street Journal and the New York Times. But despite the media hyperbole, as Christine Borgman points out in this examination of data and scholarly research, having the right data is usually better than having more data; little data can be just as valuable as big data. In many cases, there are no data—because relevant data don't exist, cannot be found, or are not available. Moreover, data sharing is difficult, incentives to do so are minimal, and data practices vary widely across disciplines. Borgman, an often-cited authority on scholarly communication, argues

that data have no value or meaning in isolation; they exist within a knowledge infrastructure—an ecology of people, practices, technologies, institutions, material objects, and relationships. After laying out the premises of her investigation—six “provocations” meant to inspire discussion about the uses of data in scholarship—Borgman offers case studies of data practices in the sciences, the social sciences, and the humanities, and then considers the implications of her findings for scholarly practice and research policy. To manage and exploit data over the long term, Borgman argues, requires

massive investment in knowledge infrastructures; at stake is the future of scholarship.

Establishing Self Sovereign Identity with Blockchain Springer

Over the past quarter century, researchers have successfully explored the inner workings of the physical and biological sciences using a variety of social and historical lenses. Inspired by these advances, the contributors to *Social Knowledge in the Making* turn their attention to the social sciences, broadly construed. The result is

the first comprehensive effort to study and understand the day-to-day activities involved in the creation of social-scientific and related forms of knowledge about the social world. The essays collected here tackle a range of previously unexplored questions about the practices involved in the production, assessment, and use of diverse forms of social knowledge. A stellar cast of multidisciplinary scholars addresses topics such as the changing practices of historical research, anthropological data collection, library usage, peer review, and institutional review boards. Turning to the world beyond the academy, other essays

focus on global banks, survey research organizations, and national security and economic policy makers. Social Knowledge in the Making is a landmark volume for a new field of inquiry, and the bold new research agenda it proposes will be welcomed in the social science, the humanities, and a broad range of nonacademic settings. Data Clustering Walter de Gruyter Research on the problem of clustering tends to be fragmented across the pattern recognition, database, data mining, and machine learning communities. Addressing this problem in a unified way, Data Clustering: Algorithms and Applications provides

complete coverage of the entire area of clustering, from basic methods to more refined and complex data clustering approaches. It pays special attention to recent issues in graphs, social networks, and other domains. The book focuses on three primary aspects of data clustering: Methods, describing key techniques commonly used for clustering, such as feature selection, agglomerative clustering, partitional clustering, density-based clustering, probabilistic clustering, grid-based clustering, spectral clustering, and nonnegative matrix factorization Domains, covering methods used for different domains of data, such as

categorical data, text data, multimedia data, graph data, biological data, stream data, uncertain data, time series clustering, high-dimensional clustering, and big data Variations and Insights, discussing important variations of the clustering process, such as semisupervised clustering, interactive clustering, multiview clustering, cluster ensembles, and cluster validation In this book, top researchers from around the world explore the characteristics of clustering problems in a variety of application areas. They also explain how to glean detailed insight from the clustering process—including how to verify the quality of the underlying

clusters—through supervision, human intervention, or the automated generation of alternative clusters. *Imagined Futures in Science, Technology and Society* Springer An authoritative Handbook which offers a discussion of the social, political, ethical and economic consequences and implications of the new bio-sciences. The Handbook takes an interdisciplinary approach providing a synoptic overview of contemporary international social science research on genetics, genomics and the new life sciences. It brings together leading scholars with expertise across a wide-ranging spectrum of research fields related to the production, use,

commercialisation and regulation of genetics knowledge. The Handbook is structured into seven cross-cutting themes in contemporary social science research on genetics with introductions written by internationally renowned section editors who take an interdisciplinary approach to offer fresh insights on recent developments and issues in often controversial fields of study. The Handbook explores local and global issues and critically approaches a wide range of public and policy questions, providing an invaluable reference source to a wide variety of researchers, academics and policy makers.

Cumulative List of Organizations Described in Section 170 (c) of the Internal Revenue

Code of 1986 Taylor & Francis

The edited volume *New Economies for Sustainability: Limits and Potentials for Possible Futures* brings together a range of alternative views on economy and organization to illustrate different perspectives on how to work towards more sustainable solutions to production, consumptions and economic organization

more generally. The book brings chapters from the most renowned scholars in the field, who bring their perspectives on how alternative schools theorize politics, society, organization, nature and ethics in their attempts to develop theories with a strong focus on sustainability. The book aims to contribute with a platform for gathering and collecting these theories in a pluralist economic framework, which can provide a strong alternative voice to mainstream economic theories in sustainability debates. [Policy Paradigms in Theory and Practice](#)
CRC Press

"This volume represents the social constructivist turn of the field. It is evident

that social constructivism made a major impact on the field during the 1970s and 1980s. The diverse papers included here highlight the role of ethnography in STS. In addition, we are exposed to new perspectives of the multicultural and gendered nature of knowledge production." —Science, Technology, and Society For the most current, comprehensive resource in this rapidly evolving field, look no further than the Revised Edition of the Handbook of Science and Technology Studies. This masterful volume is the first resource in more than 15 years to define, summarize, and synthesize this complex

multidisciplinary, international field. Tightly edited with contributions by an internationally recognized team of leading scholars, this volume addresses the crucial contemporary issues—both traditional and nonconventional—social studies, political studies, and humanistic studies in this changing field. Containing theoretical essays, extensive literature reviews, and detailed case studies, this remarkable volume clearly sets the standard for the field. It does nothing less than establish itself as the benchmark, one that will carry the field well into the next century. "The long-awaited Handbook of Science and Technology Studies

sponsored by the Society for Social Studies of Science is a truly substantial work, both in size and in the breadth of its many contributions. It is a rich and valuable guide to much that is transpiring in the field of Science and Technology Studies. In the editors' words, it is 'an unconventional but arresting atlas of the field at a particular moment in its history.'" —Science, Technology & Society "This book is not only an important resource for practitioners, but it also may help to spark the curiosity of those who are outside the field—including scientists and engineers themselves—and so pull the 'half-seen world' of science and technology studies

even more fully into the light of day." —American Scientist "The book as a whole is an impressive testimony to the vitality of a burgeoning field." —New Scientist "It reflects the international and interdisciplinary nature of the society. An excellent resource" —Choice The Handbook of Genetics & Society Multilingual Matters The present volume elucidates the scope of responsibility in science and technology governance by way of assimilating insights gleaned from sociological theory and STS and by investigating the ways in which responsibility unfolds in social processes. Drawing on these theoretical perspectives, the

volume goes on to review a 'heuristic model' of responsibility. Such a model provides a simple, tentative, though no less coherent analytical framework for further examining the idea of responsibility, its transformations, configurations and contradictions. *Social Knowledge in the Making* University of Chicago Press

What challenges are posed by changing transnational trends, agendas and movements that affect disabled people's lives, and what can disabled people, their representative organisations and their governments do to advance the agenda for self-determination and inclusion? This book draws together

the writing of academics and activists to depict the experience and perspective of disabled people in relation to a range of contemporary social changes, with a focus firmly on ways in which disabled people and their allies can act to counter disabling policies and practices. Throughout the book there is an emphasis on disabled people's own voices and activism as the critical driver of theoretical critique and practical change. Chapters address a wide range of cultural, institutional and personal arenas to explore and contest the boundaries that disabled people seek to move beyond, from cross-border labour movements in Korea to experience of day services in England,

from continuing and long-lasting realities of wars in Lebanon, Cambodia and Somalia to the beauty of harmony in Navajo traditions for understanding disability, from collective activism to individual participation in the Olympics. This book is recommended reading for students, researchers and activists interested in Disability Studies and is directly relevant to policy makers and practitioners in a position to reshape

rights, spaces and innovations in response to the priorities disabled people feel and articulate are important for their lives. It was originally published as a special issue of Disability & Society.

Big Data, Little Data, No Data Routledge Includes section, "Recent book acquisitions" (varies: Recent United States publications) formerly published separately by the U.S. Army Medical Library.
