Vascular Epiphytes

Oxbow Books Limited
TRENDS IN LINGUISTICS is a series of books that open new perspectives in our understanding of language. The series publishes state-of-the-art work on core areas of linguistics across

theoretical frameworks as well as studies that provide new insights by building bridges to neighbouring fields such as neuroscience and cognitive science. TRENDS IN LINGUISTICS considers itself a forum for cutting-edge research based on solid empirical data on language in its various manifestations, including sign languages. It regards linguistic

variation in its synchronic and diachronic dimensions as well as in its social contexts as important sources of insight for a better understanding of the design of linguistic systems and the ecology and evolution of language. TRENDS IN LINGUISTICS publishes monographs and outstanding dissertations as well as edited volumes,

which provide the opportunity to address controversial topics from different empirical and theoretical viewpoints. High quality standards are ensured through anonymous reviewing. Plasma Nanoscience Springer Science & Business Media Originally published in 1965, this volume presented the only comprehensive bibliography of the writings of the Austrian novelist, journalist, and playwright Stefan Zweig and of the books and

articles about his work.

The Antitrust Revolution in Europe

Cambridge University Press

Aluminium was one of most cartelised industries in the international economic panorama of the 20th century. Born following the discovery of electrolytic smelting process in 1886, this industry, even in its infancy, established a cartel which characterised its history until nearly 1980. Managers of the aluminium industry from various historical eras and

countries shared the same vision about the development of their industry: to keep prices as stable as possible in order to encourage expansions and to provide return on investments. Price instability, which characterised the trade of other commodities, was unknown to the aluminium industry. This book neither argues that cartels are fundamentally evil, nor attempts to demonstrate that cartels are optimal business organisations. It instead provides an in-depth and

frank analysis of the internal working of industrial organisations and of the interplay between cartels and political powers and institutions. The International Aluminium Cartel offers explanations for the construction and collapse of cartels, descriptions of their operations, and an historical interpretation of their experiences. Incorporating information gleaned from a unique collection of private and public archives from several countries, this

unique study will appeal to a wide variety of readers, including academics interested in industrial and business history. *Le Pacifique Sud* Springer The beneficial impact of the European communities involvement in scientific research and technology is wide-ranging and pervasive. There are high hopes of major advances in scientific knowledge and technological processes, while the emergence of a genuine tradition of collaborative research

holds out great and continuing promise for the future. Close, frequent and long-term cooperation between universities, research centres and industry is already generating new synergies, forging a truly European scientific community. Many of tomorrows industrial developments, destined to be determinant for our economic success and prosperity, will spring from this research. The Concerted European Action on Magnets - CEAM - project is a prime

example of collaborative research and development. Financed from the Communities STIMULATION action and implemented with the help of EURAM, the advanced materials programme, CEAM will bestow great benefits on European industrial competitiveness, providing a channel for high quality basic research to find its way into commercial products. This remarkable cooperative enterprise brought together 58 laboratories and more

than 120 scientists and engineers in a sustained thirty month effort. It spanned every aspect of new iron-based high performance magnets from theoretical modelling of their intrinsic magnetic properties to the design and construction of novel electrical devices and machines. Besides adding a new European dimension to advanced magnetic technology, CEAM also ensured that a whole new generation of young researchers and technicians have been trained in applied

magnetism.
EPA 560/11 Elsevier
 This book critically reviews advances in our understanding of the biology of vascular epiphytes since Andreas Schimper's 1888 seminal work. It addresses all aspects of their biology, from anatomy and physiology to ecology and evolution, in the context of general biological principles. By comparing epiphytes with non-epiphytes throughout, it offers a valuable resource for researchers in plant sciences and related

disciplines. A particular strength is the identification of research areas that have not received the attention they deserve, with conservation being a case in point. Scientists have tended to study pristine systems, but global developments call for information on epiphytes in human-disturbed systems and the response of epiphytes to global climate change.

Schlieren and Shadowgraph Techniques Univ of California Press

Why is historicism a problem? Why do we need a new historicism? This text considers these questions and aims to show that the problem of historicism, and new historicism, is more than just a problem of knowledge-validity and that new historicism is not so much an answer to the difficulties of history writing but the opening of new questions.

Quantum Collision Theory
Peter Lang
Schlieren and shadowgraph techniques are basic and valuable

tools in various scientific and engineering disciplines. They allow us to see the invisible: the optical inhomogeneities in transparent media like air, water, and glass that otherwise cause only ghostly distortions of our normal vision. These techniques are discussed briefly in many books and papers, but there is no up-to-date complete treatment of the subject before now. The book is intended as a practical guide for those who want to use these methods, as well as a resource for a

broad range of disciplines where scientific visualization is important. The colorful 400-year history of these methods is covered in an extensive introductory chapter accessible to all readers. Flame Spectroscopy Random House Neal Stephenson follows his highly-praised historical novels, Quicksilver and The Confusion, with the extraordinary third and final volume of the Baroque Cycle. The year is 1714. Daniel Waterhouse has returned

to England, where he joins forces with his friend Isaac Newton to hunt down a shadowy group attempting to blow up Natural Philosophers with 'Infernal Devices' - time bombs. As Daniel and Newton conspire, an increasingly vicious struggle is waged for England's Crown: who will take control when the ailing queen dies? Tories and Whigs clash as one faction jockeys to replace Queen Anne with 'The Pretender' James Stuart, and the other promotes the Hanoverian dynasty of

Princess Caroline. Meanwhile, a long-simmering dispute between Newton and Gottfried Wilhelm Leibniz comes to a head, with potentially cataclysmic consequences. Wildly inventive, brilliantly conceived, The System of the World is the final volume in Neal Stephenson's hugely ambitious and compelling saga. Filled with a remarkable cast of characters in a time of genius, discovery and change, the Baroque Cycle is a magnificent and

unique achievement. *Studies in the Lancelot Legend* R. R. Bowker Filling the need for a single work specifically addressing how to use plasma for the fabrication of nanoscale structures, this book is the first to cover plasma deposition in sufficient depth. The author has worked with numerous R&D institutions around the world, and here he begins with an introductory overview of plasma processing at micro- and nanoscales, as well as the current problems and

challenges, before going on to address surface preparation, generation and diagnostics, transport and the manipulation of nano units.

Concerted European Action on Magnets (CEAM) Walter de Gruyter Composite Materials, Volume 4: Metallic Matrix Components provides an in-depth report and a reference on the technology of metal-matrix composites. The book starts by giving an introduction to metal-matrix composites, and by discussing the principal

metal-laminate fabrication methods, the properties of metal laminates, and materials engineering of laminated-metal composites for specific applications. The text also describes the technology in eutectic superalloys of nickel and cobalt; nickel alloys reinforced with alpha-Al₂O₃ filaments; and the problems and progress encountered in developing wire-reinforced superalloys. The fiber-reinforced titanium alloys; the development of metal-matrix composites

reinforced with high-modulus graphite fibers; as well as the development, the physical and mechanical properties, and the engineering considerations for the use of boron-aluminum are also encompassed. Materials scientists and engineers will find the book invaluable.

Irregular Serials & Annuals Springer Science & Business Media

In the past decades, the scan rate range of calorimeters has been extended tremendously at

the high end, from approximately 10 up to 10 000 000 °C/s and more. The combination of various calorimeters and the newly-developed Fast Scanning Calorimeters (FSC) now span 11 orders of magnitude, by which many processes can be mimicked according to the time scale(s) of chemical and physical transitions occurring during cooling, heating and isothermal stays in case heat is exchanged. This not only opens new areas of research on polymers, metals,

pharmaceuticals and all kinds of substances with respect to glass transition, crystallization and melting phenomena, it also enables in-depth study of metastability and reorganization of samples on an 1 to 1000 ng scale. In addition, FSC will become a crucial tool for understanding and optimization of processing methods at high speeds like injection molding. The book resembles the state-of-the art in Thermal Analysis & Calorimetry and is an excellent starting point for both

experts and newcomers in the field.

Bibliography of

Publications Springer
Written sources from the ancient Near East and eastern Mediterranean, from the third to the first millennia BC, provide a wealth of terms for textiles. The twenty-two chapters in the present volume offer the first comprehensive survey of this important material, with special attention to evidence for significant interconnections in textile terminology among languages and cultures,

across space and time. For example, the Greek word for a long shirt, khiton , ki-to in Linear B, derives from a Semitic root, ktn . But the same root in Akkadian means linen, in Old Assyrian a garment made of wool, and perhaps cotton, in many modern languages. These and numerous other instances underscore the need for detailed studies of both individual cases and the common threads that link them. This example illustrates on the one hand how connected

some textiles terms are across time and space, but it also shows how very carefully we must conduct the etymological and terminological enquiry with constantly changing semantics as the common thread. The survey of textile terminologies in 22 chapters presented in this volume demonstrates the interconnections between languages and cultures via textiles.

Manchester University Press

An all-inclusive list of books pertaining to

Lithuania held by libraries of the United States and Canada. Subjects covered in the two-volume set include geography, geology, legislation, censuses, diplomacy and foreign relations, social structure, culture, the economy, religion and many others.

A Lithuanian

Bibliography Springer

This book seeks to establish the degree to which Gallicisms permeated the Russian language in the eighteenth century. The largest group of

borrowings were the semantic and phraseological calques. In order to examine this influence, the author has selected scores of examples from the original works, translations and correspondence of Russian writers from the 1730s to the end of the century. The calques analysed belong to various registers of the literary language, from the prose used in essays and correspondence to the most lyrical form found in poetry and

certain translations. This book concludes that the French influence was overwhelming and fully enhanced the Russian literary language that was developed during this period.

Plants on Plants – The Biology of Vascular Epiphytes

IndyPublish.com

This collection makes available in English for the first time the panegyric of Claudius Mamertinus (Panegyrici Latini XI/3), a substantial part of the treatise of John Chrysostom on St Babylas

and against Julian (de S. Babyla c. Julianum et gentiles XIV-XIX), and Emphrem Syrus' Hymns Against Julian.

Bibliotheca Indosinica

Edward Elgar Publishing
This booklet hardly needs a preface; the contents, I think, speak for themselves. It contains a short and carefully brought up to date resume of all that I, as a private University Lecturer in Amsterdam, have tried to teach my pupils. It is intended as a general introduction to ethno-musicology, before

going on to the study of the forms of separate music-cultures. I sincerely hope that those, who wish to teach themselves and to qualify in this branch of knowledge, will find a satisfactory basis for self tuition in the matter here brought together.

Regarding the possibility of a new edition, any critical remarks or information as to possible desiderata would be very gratefully received. J.K.
PREFACE TO THE SECOND EDITION
My request for critical remarks and desiderata has not been

ignored. My sincere thanks to all who took the trouble to let me know what they missed in my booklet. Through their collaboration the contents have undergone a considerable improvement and enlargement as compared to the original edition issued in 1950 by the Royal Tropical Institute, Amsterdam, under the title 'Musicologica'. I have taken care to add many particulars from non-European sources, with the result that now the book is no longer so

Europe-centric as it was.

WSC2008Chair's Welcome
Message Dear Colleague,
The World Soft Computing
(WSC) conference is an
annual international
online conference on
applied and theoretical
soft computing
technology. This WSC
2008 is the thirteenth
conference in this series
and it has been a great
success. We received a lot
of excellent paper
submissions which were
peer-reviewed by an
international team of

experts. Only 60 papers
out of 111 submissions
were selected for online
publication. This assured
a high quality standard for
this online conference.
The corresponding online
statistics are a proof of
the great world-wide
interest in the WSC 2008
conference. The
conference website had a
total of 33,367 different
human user
accesses from 43 countries
with around 100 visitors
every day, 151 people
signed up to WSC to
discuss their scientific
disciplines in our chat

rooms and the forum. Also
audio and slide
presentations allowed a
detailed discussion of the
papers. The submissions
and discussions showed
that there is a wide range
of soft computing
applications to date. The
topics covered by the
conference range from
applied to theoretical
aspects of fuzzy, neuro-
fuzzy and rough sets over
to neural networks to
single and multi-objective
optimisation.
Contributions
about particle swarm optimi-
sation, gene expression pro

gramming, clustering, classification, support vector machines, quantum evolution and agent systems have also been received. One whole session was devoted to soft computing techniques in computer graphics, imaging, vision and signal processing. *Theophil Hansen and the Library of the Academy of Fine Arts Vienna* University of North Carolina S This title is part of UC Press's Voices Revived program, which commemorates University of California Press's

mission to seek out and cultivate the brightest minds and give them voice, reach, and impact. Drawing on a backlist dating to 1893, *Voices Revived* makes high-quality, peer-reviewed scholarship accessible once again using print-on-demand technology. This title was originally published in 1976. *Ethno-Musicology* Presses Univ de Bordeaux Lee McGowan's authoritative book is a very welcome addition to the literature on developments in

European antitrust. It focuses primarily on EU supranational cartel policy, providing a fascinating, critical account of why policy developed as it has and of its effectiveness in detecting, punishing and deterring cartelists to the present. With its emphasis on institutional structures and decision making processes and its use of examples, the book will be an invaluable reference for political scientists and should also attract a wide readership among economists and

lawyers. - Eleanor J. Morgan, University of Bath, UK.

Analytical Flame Spectroscopy John Wiley & Sons

Market: Scientists, engineers, and graduate students in atomic physics, astrophysics, spectroscopy,

atmospheric and solid state physics, and semiconductor research. Drawn from the author's lectures to undergraduates at Oxford University, this 1955 work features probing analyses of many problems in atomic physics, plasma physics, spectroscopy, atmospheric and solid

state physics. By emphasizing fundamental concepts and the limitations of treatments rather than the details of theories, this book has become a valued reference tool both in academia and among professionals in the scientific community.
