International Finance Cengage AU

The eleventh edition of *Multinational Financial Management* is a comprehensive survey of the essential areas of the international financial market environment, including foreign exchange and derivative markets, risk management, and international capital markets and portfolio investment. Designed for upper-level undergraduate and masters-level courses in international finance and management, this textbook offers readers a conceptual

framework for analyzing key financial decisions of multinational firms. The authors both explain and simplify multinational financial management by illustrating how its basic principles share the same foundation as domestic corporate finance. Assuming no prior knowledge of international economics or finance, this substantially revised new edition builds upon the fundamental principles of domestic financial management to examine the unique dimensions of international finance. Readers are presented with a solid theoretical knowledgebase for examining decision problems, as well as practical analytical techniques that clarify the often-ambiguous guidelines used by international financial executives. All the traditional areas of corporate finance are explored from the perspective of a multinational corporation, focusing on elements rarely encountered in domestic finance such as multiple currencies, segmented capital markets, and political risks of nationalization or expropriation.

The overriding objective of Eun and Resnick's *International Financial Management*, 3e is to teach students how to be effective global financial managers. The text covers the fundamentals of the macroeconomic environment of international financial management, discusses the financial environment in which the multinational firm and its managers must function, and covers foreign exchange management and financial management in a multinational firm.

Multinational Financial Management McGraw-Hill Companies
The book is designed to integrate the theory of foreign exchange

rate determination and the practice of global finance in a single volume, which demonstrates how theory guides practice, and practice motivates theory, in this important area of scholarly work and commercial operation in an era when the global market has become increasingly integrated. The book presents all major subjects in international monetary theory, foreign exchange markets, international financial management and investment analysis. The book is relevant to real world problems in the sense that it provides guidance on how to solve policy issues as well as practical management tasks. This in turn helps the reader to gain an understanding of the theory and refines the framework. This new edition of the book incorporates two new chapters, together with - dating most chapters in the first edition, integrating new materials, data, and/or the recent developments in the areas. A new chapter on the portfolio balance approach to exchange rate determination is included, in addition to the major models - included in the first edition: the Mundell-Fleming model, the flexible price monetary model, the sticky price monetary model featured by the Dornbusch model and the real interest rate differential model. This makes the book inclusive in exchange rate theories. A second new chapter included is on issues in balance of payments or international transactions and their interactions with exchange rates, changes in exchange rates and exchange rate policies.

International Financial Management (3rd Edition) McGraw-Hill Companies

The principal message of this book is that international financial enterprises must be reoriented towards funding productive activities rather than potentially destabilizing speculation. The effects of financial sector operations are addressed with serious warnings that the dangers of speculative destabilization are increasing as regulatory and market discipline gradually weakens. The Structural Foundations of International Finance examines the ways in which national economies, especially those of industrialized countries, are affected by the operations of international financial markets. Although these markets provide productive funding, there is also much speculative trading in stocks and currencies which can cause booms, slumps and hinder recovery. The authors advocate entrepreneurial coordination by productive enterprises for balanced and stable growth, with reduced risks of financial crises and recessions.
