If you're new to writing requirements,
and you're assigned to a new enterprise
software or IT project to create
requirements, where do you begin? How
do you elicit requirements effectively

from stakeholders? What's a good
requirement versus a bad one? This
book explains how to write requirements
according to the standards in A Guide to
the Business Analysis Body of
Knowledge(R) (the BABOK(R) Guide)
published by the International
Association of Business Analysts. It
describes the process you'll need to go
through from start to finish, from the
point that you're assigned to the project

to when you finalize your requirements. It provides suggestions for tools, processes, and techniques you'll need to develop quality-oriented requirements for your stakeholders, all aligned with the knowledge areas of the BABOK(R) Guide. Some examples of requirements for the Agile software methodology are also provided. This book is written by Pamela Paterson, MS, CBAP, who is a senior business analyst with over 20 years of experience on enterprise IT projects. Pamela has written several books, including the #1 international best-seller *Get the Job*.

Evaluates the practicability of applying photovoltaic (PV) panels in high-rise (approximately 20 stories) commercial

buildings. Specifically, this research is intended to provide a pre-planning tool during the early design stage for architects and designers who are considering the use of PV panels in new multi-story construction.

The European Food Safety Agency (EFSA) has identified acrylamide as a public health concern due to its relation with the appearance of different types of cancer, and continued efforts are required to reduce exposure to acrylamide (EFSA, 2015). During the last few years, EFSA has maintained a high level of supervision to monitor the acrylamide levels in processed products, urging companies to implement effective mitigation strategies for reducing formation of this contaminant. Recently, the European Commission has published a regulation that sets mitigation measures for the reduction of this compound in foods, identifying new benchmark levels for a number of food categories (European Commission,

2017). The Regulation 2158/2017 compels food processors and food business operators in Europe to reduce the presence of acrylamide in their products, applying measures proportionate to the size and nature of the establishments. With the goal of providing information that contributes to our understanding for this process contaminant and exposure through dietary routes, this Special Issue explores the recent advances on the study of acrylamide in foods, including novel insights into the chemistry of its formation and elimination, effective mitigation strategies, conventional and innovative monitoring techniques, risk/benefit approaches, and exposure assessment.

In today's knowledge-driven world, innovation and innovation systems have become key policy issues. However, the extent of knowledge that is available on these concepts in less developed countries is still relatively low. Much of what we know about innovation theory and systems has come from the developed countries and reflects their world view. This apparent knowledge deficit has major implications for less developed countries. Innovation Systems and Capabilities in Developing Regions adds to the growing body of knowledge on developing countries. The theoretical and empirical case studies presented here advance the notion that, while developing countries may not engage in frontier research, a critical knowledge

base upon which these countries compete for global markets is emerging. There is evidence that state and non-state actors are increasingly emphasising policies that sit within the framework of national innovation systems. This book illuminates this shift in policy competence at national levels. The contributions in this volume highlight the need for thorough understanding of the role of diffusion-based innovation linked to technology transfer and acquisition. They also provide empirical evidence on the drivers, dynamics and impact of such innovation in developing economies and the constraints that apply. Contributors also document the application of the innovation system approach in developing countries as well as the

build-up and diffusion of technological capabilities within innovation systems. Academics, higher level students, policy makers and practitioners involved with innovation and the economics of technical change, particularly in developing countries, will find this a valuable book.

Whether within or beyond the confines of the state, digitalization continues to transform politics, society and democracy. Information and Communication Technologies (ICTs) have already considerably affected political systems and structures, and no doubt they will continue to do so in the future. Adopting an international and comparative perspective, *Digital Democracy in a Globalized World*

examines the impact of digitalization on democratic political life. It offers theoretical analyses as well as case studies to help readers appreciate the changing nature of democracy in the digital age.

Demonstrates how to use the Python programming language (an object-oriented scripting language) as a development and administrations tool for Win32. Focused on tasks rather than programming (although a brief tutorial is provided) the authors cover how Python works on Windows; the key integration technologies supported by Python on Windows; and examples of what Python

can do with databases, email, Internet protocols, NT services, communications, and other areas. Annotation copyrighted by Book News, Inc., Portland, OR
