The Red Sea is a unique
and fragile environment.
All but landlocked
between Africa and
Arabia, its peculiar
oceanographic conditions,
its geographical position
and its geological history
all conspire to make it
particularly vulnerable to
the side-effects of human
civilization. In places, it is
already a key
environment under threat.
What makes the Red Sea

unique? What are the threats to this environment? Where should future research be directed? These are just three of the major questions addressed by the scientists contributing to this book.

Vocke BoD - Books on Demand

The Native Races of the Pacific States is the magnum opus American historian and ethnologist Hubert Howe Bancroft who took upon himself the task of researching the exotic civilizations of the entire Pacific coast region. This region, from Alaska to Darien, including the whole of Mexico and

Central America, he named the Pacific States. Before the arrival of Europeans, these territories were populated by aborigines, from the reptile-eating cave-dwellers of the Great Basin, to the Aztec and Maya civilization of the southern table-land. Volume 1 - Wild Tribes Volume 2 - Civilized Nations Volume 3 - Myths and Languages Volume 4 - Antiquities Volume 5 - Primitive History *English Poets. A Selection from the Works of the British Poets ... with a*

German Translation by O. L. H. R SUNY Press

This book illustrates the deep roots of the geometrically nonlinear kinematics of generalized continuum mechanics in differential geometry. Besides applications to first- order elasticity and elasto-plasticity an appreciation thereof is particularly illuminating for generalized models of continuum mechanics such as second-order (gradient-type) elasticity and elasto-plasticity. After a motivation that arises from considering

geometrically linear first- and second- order crystal plasticity in Part I several concepts from differential geometry, relevant for what follows, such as connection, parallel transport, torsion, curvature, and metric for holonomic and anholonomic coordinate transformations are reiterated in Part II. Then, in Part III, the kinematics of geometrically nonlinear continuum mechanics are considered. There various concepts of differential geometry, in particular aspects related to

compatibility, are generically applied to the kinematics of first- and second- order geometrically nonlinear continuum mechanics. Together with the discussion on the integrability conditions for the distortions and double-distortions, the concepts of dislocation, disclination and point-defect density tensors are introduced. For concreteness, after touching on nonlinear first- and second-order elasticity, a detailed discussion of the

kinematics of (multiplicative) first- and second-order elasto-plasticity is given. The discussion naturally culminates in a comprehensive set of different types of dislocation, disclination and point-defect density tensors. It is argued, that these can potentially be used to model densities of geometrically necessary defects and the accompanying hardening in crystalline materials. Eventually Part IV summarizes the above findings on integrability

whereby distinction is made between the straightforward conditions for the distortion and the double-distortion being integrable and the more involved conditions for the strain (metric) and the double-strain (connection) being integrable. The book addresses readers with an interest in continuum modelling of solids from engineering and the sciences alike, whereby a sound knowledge of tensor calculus and continuum mechanics is required as a prerequisite.

Das Reich Des Todes Im Meer. [With Illustrations.]. BRILL
Bilingual English-German edition of second collection published by the German poet, dramatist, and philosopher Karoline von Günderode (1780–1806). The second collection of writings by the German poet, dramatist, and philosopher Karoline von Günderode (1780–1806), Poetic Fragments was published in 1805 under the pseudonym  Tian. 
G nderode's work is an unmined source of insight

into German Romanticism and Idealism, as well as into the reception of Indian, Persian, and Islamic thought in Europe. Anna C. Ezekiel's introductions highlight the philosophical significance of the texts, demonstrating their radical and original consideration of the nature of the universe, death, religion, power, and gender roles. The dramas *„Hildgund“* and *„Muhammad, the Prophet of Mecca“* are two of Günderrode's most important works for her

accounts of agency, recognition, and the status of women. The three poems included in the collection, *„Piedro,“* *„The Pilgrims,“* and *„The Kiss in the Dream,“* represent the wide range of forms in which Günderrode wrote. They reflect themes of erotic longing and union with the divine, and point to her radical reimagining of death. This bilingual English-German edition is the first volume of Günderrode's work to appear in English, and will help unearth this rich,

complex, and innovative writer for English readers.
