The Dead and Their Possessions

**MATA SHERMAN**

*A Dictionary of the New Zealand Language* Cambridge University Press  
This was first published in 2000: This text explores issues surrounding the use of human cadavers and human tissues in science and medicine. This is an area of increasing significance in contemporary society, as more and more techniques become available for manipulating human genes and human material (including embryos, body organs and brain tissue). These issues are explored through case studies from contemporary society. Some of the most topical issues examined include plastination of human bodies as an art form, the use of biopsies from surgical operations, the ethics of using human DNA and stem cells in research, and the debate surrounding the transplantation of animal tissue and organs into humans.

*Kura Koiwi BoD – Books on Demand*  
Stanislavsky in the World is an ambitious and ground-breaking work charting a fascinating story of the global dissemination and transformation of Stanislavsky's practices. Case studies written by local experts, historians and practitioners are brought together to introduce the reader to new routes of Stanislavskian transmission across the continents of Europe, Asia, Africa, Australasia and South (Latin) America. Such a diverse set of stories moves radically beyond linear understandings of transmission to embrace questions of transformation, translation, hybridisation, appropriation and resistance. This important work not only makes a significant contribution to Stanislavsky studies but also to recent research on theatre and interculturalism,

theatre and globalisation, theatre and (post)colonialism and to the wider critical turn in performer training historiographies. This is a unique examination of Stanislavsky's work presenting a richly diverse range of examples and an international perspective on Stanislavsky's impact that has never been attempted before.

*Bulletin* Psychology Press  
*Working with and for Ancestors* examines collaborative partnerships that have developed around the study and care of Indigenous ancestral human remains. In the interest of reconciliation, museums and research institutions around the world have begun to actively seek input and direction from Indigenous descendants in establishing collections care and research policies. However, true collaboration is difficult, time-consuming, and sometimes awkward. By presenting examples of projects involving ancestral remains that are successfully engaged in collaboration, the book provides encouragement for scientists and descendant communities alike to have open and respectful discussions around the research and care of ancestral human remains. Key themes for discussion include new approaches to the care for ancestors; the development of culturally sensitive museum policies; the emergence of mutually beneficial research partnerships; and emerging issues such as those of intellectual property, digital data, and alternatives to destructive analyses. Critical discussions by leading scholars also identify the remaining challenges in the repatriation process and offer a means to continue moving forward. This volume will appeal to a broad, interdisciplinary audience interested in collaborative research and management strategies that are aimed

at developing mutually beneficial relationships between researchers and descendant communities. This includes students and researchers in archaeology, anthropology, museums studies, and Indigenous communities.

*A dictionary of the New Zealand Language* Routledge

*Spiritual and Mental Concepts of the Maori* by Elsdon Best, first published in 1922, is a rare manuscript, the original residing in one of the great libraries of the world. This book is a reproduction of that original, which has been scanned and cleaned by state-of-the-art publishing tools for better readability and enhanced appreciation. Restoration Editors' mission is to bring long out of print manuscripts back to life. Some smudges, annotations or unclear text may still exist, due to permanent damage to the original work. We believe the literary significance of the text justifies offering this reproduction, allowing a new generation to appreciate it.

*Once Were Pacific* Routledge

Repatriation of human remains has become a key international heritage concern. This extensive collection of papers provides a survey of the current state of repatriation in terms of policy, practice and theory.

*Making Ends Meet* Routledge

Drawing upon material from Britain, Canada, the United States, Australia and New Zealand, *Making Representations* explores the ways in which museums and anthropologists are responding to pressures in the field by developing new policies and practices, and forging new relationships with communities. Simpson examines the increasing number of museums and cultural centres being established by indigenous and immigrant communities as they take

control of the interpretive process and challenge the traditional role of the museum. Museum studies students and museum professionals will all find this a stimulating and valuable read.

*Protection of First Nations Cultural Heritage* University of Ottawa Press

Indigenous peoples around the world are seeking greater control over tangible and intangible cultural heritage. In Canada, issues concerning repatriation and trade of material culture, heritage site protection, treatment of ancestral remains, and control over intangible heritage are governed by a complex legal and policy environment. This volume looks at the key features of Canadian, US, and international law influencing indigenous cultural heritage in Canada. Legal and extralegal avenues for reform are examined and opportunities and limits of existing frameworks are discussed. Is a radical shift in legal and political relations necessary for First Nations concerns to be meaningfully addressed?

*Indigenous Archaeology* Victoria University Press

As a practicing archaeologist and a Choctaw Indian, Joe Watkins is uniquely qualified to speak about the relationship between American Indians and archaeologists. Tracing the often stormy relationship between the two, Watkins highlights the key arenas where the two parties intersect: ethics, legislation, and archaeological practice. Watkins describes cases where the mixing of indigenous values and archaeological practice has worked well—and some in which it hasn't—both in the United States and around the globe. He surveys the attitudes of archaeologists toward American Indians through an inventive series of of hypothetical scenarios, with some eye-opening results. And he calls

for the development of Indigenous Archaeology, in which native peoples are full partners in the key decisions about heritage resources management as well as the practice of it. Watkins' book is an important contribution in the contemporary public debates in public archaeology, applied anthropology, cultural resources management, and Native American studies.

UBC Press

The global community, dependent as always on the cooperation of nation states, is gradually learning to address the serious threats to the cultural heritage of our disparate but shared civilizations. The legacy of conquest, colonialization, and commerce looms large in defining and explaining these threats. The essays contained in this challenging volume are based on papers presented at an international conference on cultural heritage issues that took place at Willamette University. The conference sought to generate fresh ideas about these cultural heritage issues; offer a good sense of their nuances and complexities; and reveal how culture, law, and ethics can interact, complement, diverge, and contradict one another.

*Speaking for the Dead* Bloomsbury Publishing

Kura Koiwi is both a personal account of Brian Flintoff's career as a carver, but also an important exploration of Maori art and how it relates to carving.

Ko nga moteatea BRILL

Challenging the Dichotomy explores how dichotomies regarding heritage dominate the discussions of ethics, practices, and institutions. Contributing authors underscore the challenge to the old paradigms from multiple forces. The case studies and discourses, both

ethnographic and archaeological, arise from a wide variety of regional contexts and cultures.

*Excavation of Koiwi Tangata at 154 Oceanbeach Road, Omanu, Tauranga (HPA Authority 2014/523)* University of Arizona Press

Vols. for 1892-1941 contain the transactions and proceedings of the society.

**A dictionary of the New-Zealand language, and a concise grammar**

Routledge

Methodologies and legislative frameworks regarding the archaeological excavation, retrieval, analysis, curation and potential reburial of human skeletal remains differ throughout the world. As work forces have become increasingly mobile and international research collaborations are steadily increasing, the need for a more comprehensive understanding of different national research traditions, methodologies and legislative structures within the academic and commercial sector of physical anthropology has arisen. The Routledge Handbook of Archaeological Human Remains and Legislation provides comprehensive information on the excavation of archaeological human remains and the law through 62 individual country contributions from Europe, Asia, Africa, North America, South America and Australasia. More specifically, the volume discusses the following: What is the current situation (including a brief history) of physical anthropology in the country? What happens on discovering human remains (who is notified, etc.)? What is the current legislation regarding the excavation of archaeological human skeletal remains? Is a license needed to excavate human remains? Is there any specific legislation regarding excavation

in churchyards? Any specific legislation regarding war graves? Are physical anthropologists involved in the excavation process? Where is the cut-off point between forensic and archaeological human remains (e.g. 100 years, 50 years, 25 years...)? Can human remains be transported abroad for research purposes? What methods of anthropological analysis are mostly used in the country? Are there any methods created in that country which are population-specific? Are there particular ethical issues that need to be considered when excavating human remains, such as religious groups or tribal groups? In addition, an overview of landmark anthropological studies and important collections are provided where appropriate. The entries are contained by an introductory chapter by the editors which establish the objectives and structure of the book, setting it within a wider archaeological framework, and a conclusion which explores the current European and world-wide trends and perspectives in the study of archaeological human remains. The *Routledge Handbook of Archaeological Human Remains and Legislation* makes a timely, much-needed contribution to the field of physical anthropology and is unique as it combines information on the excavation of human remains and the legislation that guides it, alongside information on the current state of physical anthropology across several continents. It is an indispensable tool for archaeologists involved in the excavation of human remains around the world.
