University of Hawaii Press
This book presents an analysis of the phonology, morphology, and syntax of Tinrin, a previously undescribed Melanesian language of southern New Caledonia.

Making Sense of Interventions for Children with Developmental Disorders Pearson Education

This introduction to couples and family counseling lays the foundation for student skill-building by encouraging the development of personal, professional, and ethical standards of practice. This third edition has been expanded to include couples counseling and updated to reflect recent research and current practice. Primary text features include a genogram delineating the history of the field; a comprehensive discussion of 13 widely used theories with real-life examples of quality work for each approach; a single, bicultural couple/family system case for comparison across models; and strategies for

the integration and application of the models into clinical practice with diverse clients. To help readers apply the concepts they have learned, Dr. Bitter provides numerous illustrative examples, case studies, sample client dialogues, and exercises for personal and professional growth.

Exile and Return Mosby

A classic in the field, *Articulation and Phonological Disorders: Speech Sound Disorders in Children, 7e*, presents the most up-to-date perspectives on the nature, assessment, and treatment of speech sound disorders. A must-have reference, this classic book delivers exceptional coverage of clinical literature and focuses on speech disorders of unknown causes. Offering a range of perspectives, it covers the normal aspects of speech sound articulation, normal speech sound acquisition, the classification of and factors related to the presence of phonological disorders, the assessment and remediation of speech sound disorders, and phonology as it relates to language and dialectal variations. This edition features twelve manageable chapters, including a new chapter on the classification of speech sound disorders, an expanded discussion of childhood apraxia of speech, additional coverage of evidence-based practices, and a look at both motor-based

and linguistically-based treatment approaches. *African linguistics across the disciplines* Routledge This book provides state-of-the-art coverage of research in laboratory phonology. Laboratory phonology denotes a research perspective, not a specific theory: it represents a broad community of scholars dedicated to bringing interdisciplinary experimental approaches and methods to bear on how spoken language is structured, learned and used; it draws on a wide range of tools and concepts from cognitive and natural sciences. This book describes the investigative approaches, disciplinary perspectives, and methods deployed in laboratory phonology, and highlights the most promising areas of current research. Part one introduces the history, nature, and aims of laboratory phonology. The remaining four parts cover central issues in research done within this perspective, as well as methodological resources used for investigating these issues. Contributions to this volume address how laboratory phonology approaches have provided

insight into human speech and language structure and how theoretical questions and methodologies are intertwined. This Handbook, the first specifically dedicated to the laboratory phonology approach, builds on the foundation of knowledge amassed in linguistics, speech research and allied disciplines. With the varied interdisciplinary contributions collected, the Handbook advances work in this vibrant field. *The History of the Ancient Parish of Sandbach, Co. Chester* John Wiley & Sons The most comprehensive book ever written on leatherback sea turtles. Weighing as much as 2,000 pounds and reaching lengths of over seven feet, leatherback turtles are the world's largest reptile. These unusual sea turtles have a thick, pliable shell that helps them to withstand great depths—they can swim more than one thousand meters below the surface in search of food. And what food source sustains these goliaths? Their diet consists almost exclusively of jellyfish, a meal they crisscross the oceans to find. Leatherbacks have been

declining in recent decades, and some predict they will be gone by the end of this century. Why? Because of two primary factors: human redevelopment of nesting beaches and commercial fishing. There are only twenty-nine index beaches in the world where these turtles nest, and there is immense pressure to develop most of them into homes or resorts. At the same time, longline and gill net fisheries continue to overwhelm waters frequented by leatherbacks. In *The Leatherback Turtle*, James R. Spotila and Pilar Santidrián Tomillo bring together the world's leading experts to produce a volume that reveals the biology of the leatherback while putting a spotlight on the conservation problems and solutions related to the species. The book leaves us with options: embark on the conservation strategy laid out within its pages and save one of nature's most splendid creations, or watch yet another magnificent species disappear. *Children's Speech Sound Disorders* JHU Press In this book, aimed at both parents and

professionals, the authors discuss the non-evidence-based interventions that proliferate in the fields of children's speech, language, literacy, fluency, voice, communication, attention, cognition, working memory, behaviour and social connectedness. They explore the science - or lack thereof - behind the interventions and suggest evidence-based alternatives that enjoy stronger scientific support. The authors approach their topic with a deep understanding of, and empathy for, the parents and professionals who are doubtful about conventional treatments, disappointed with the practitioners associated with them, and attracted to controversial interventions.

Since the hiring of its first Africanist linguist Carleton Hodge in 1964, Indiana University's Department of Linguistics has had a strong and continuing presence in the study of African languages and linguistics through the work of its faculty and of its graduates on the faculties of many other universities. Research on African linguistics at IU has covered some of the major language groups spoken on the African continent. Carleton Hodge's work on Ancient Egyptian and Hausa, Paul Newman's work on Hausa and Chadic languages, and Roxanna Ma Newman's work on Hausa language structure and pedagogy have been some of the most important studies on Afro-Asiatic linguistics. With respect to Niger-Congo languages, the work of Charles Bird on Bambara and the Mande languages,

Robert Botne's work on Bantu structure (especially tense and aspect), Samuel Obeng and Colin Painter's work on Ghanaian Languages (phonetics, phonology, and pragmatics), Robert Port's studies on Swahili, and Erhard Voeltz's studies on Bantu linguistics are considered some of the most influential studies in the sub-field. On Nilo Saharan languages, the work of Tim Shopen on Songhay stands out. IU Linguistics has also forwarded theoretical work on African languages, such as John Goldsmith's seminal research on tone in African languages. The African linguistics faculty at IU have either founded or edited important journals in African Studies, African languages, and African linguistics, including *Africa Today*, *Studies in African Linguistics*, and *Journal of African Linguistics*. In 1972, the Indiana University Department of Linguistics hosted the Third Annual Conference of African Linguistics. Proceedings of that conference were published by Indiana University Publications (African Series, vol. 7). In 1986, IU hosted the

Seventeenth Annual Conference of African Linguistics with Paul Newman and Robert Botne editing the proceedings in a volume entitled *Current Approaches to African Linguistics*, vol. 5. In 2016, Indiana University hosted the 48th Annual Conference on African Linguistics with the theme *African Linguistics Across the Disciplines*. Proceedings of that meeting are published in this volume. The papers presented in this volume reflect the diversity of opportunities for language study in Africa. This collection of descriptive and theoretical work is the fruit of data gathering both in-country and abroad by researchers of languages spoken across the continent, from Sereer-sin in the west to Somali in the northeast to Ikalanga in the south. The range of topics in this volume is also broad, representative of the varied field work in country and abroad that inspires research in African linguistics. This collection of papers spans the disciplines of phonology (both segmental and suprasegmental), morphology (both morphophonological and

morphosyntactic), syntax, semantics, and language policy. The data and analyses presented in this volume offer a cross-disciplinary view of linguistic topics from the many under-resourced languages of Africa.

Many books of the Hebrew Bible were either composed in some form or edited during the Exilic and post-Exilic periods among a community that was to identify itself as returning from Babylonian captivity. At the same time, a dearth of contemporary written evidence from Judah/Yehud and its environs renders any particular understanding of the process within its social, cultural and political context virtually impossible. This has led some to label the period a dark age or black box – as obscure as it is essential for understanding the history of Judaism. In recent years, however, archaeologists and historians have stepped up their effort to look for and study material remains from the period and integrate the local history of Yehud, the return from Exile, and the restoration of Jerusalem’s temple more firmly within the regional, and indeed global, developments of the time. At the same time, Assyriologists have also been introducing a wide range of cuneiform

material that illuminates the economy, literary traditions, practices of literacy and the ideologies of the Babylonian host society – factors that affected those taken into Exile in variable, changing and multiple ways. This volume of essays seeks to exploit these various advances.

TEACH YOUR STUDENTS TO READ WITH PRECISION AND INSIGHT The world we are preparing our students to succeed in is one bound together by words and phrases. Our students learn their literature, history, math, science, or art via a firm foundation of strong reading skills. When we teach students to read with precision, rigor, and insight, we are truly handing over the key to the kingdom. Of all the subjects we teach reading is first among equals. Grounded in advice from effective classrooms nationwide, enhanced with more than 40 video clips, Reading Reconsidered takes you into the trenches with actionable guidance from real-life educators and instructional champions. The authors address the anxiety-inducing world of Common Core State

Standards, distilling from those standards four key ideas that help hone teaching practices both generally and in preparation for assessments. This 'Core of the Core' comprises the first half of the book and instructs educators on how to teach students to: read harder texts, 'closely read' texts rigorously and intentionally, read nonfiction more effectively, and write more effectively in direct response to texts. The second half of Reading Reconsidered reinforces these principles, coupling them with the 'fundamentals' of reading instruction—a host of techniques and subject specific tools to reconsider how teachers approach such essential topics as vocabulary, interactive reading, and student autonomy. Reading Reconsidered breaks an overly broad issue into clear, easy-to-implement approaches. Filled with practical tools, including: 44 video clips of exemplar teachers demonstrating the techniques and principles in their classrooms (note: for online access of this content, please visit my.teachlikeachampion.com) Recommended book lists Downloadable tips

and templates on key topics like reading nonfiction, vocabulary instruction, and literary terms and definitions. Reading Reconsidered provides the framework necessary for teachers to ensure that students forge futures as lifelong readers.
