WikipediaThe function of a turbocharger is to increase the overall power and efficiency of an engine. It has two main parts: A blower and a turbine. Turbine rotates with the shaft by the kinetic energy of flue gas produced by nozzle rings. Marine Diesel Engine - Parts And Functions - ShipFeverEngine block is an important parts of an engine. It is made by pouring the molten iron or aluminum alloy into a mold. The mold is made such that we should have required number of holes in the casted block, which are said to be the number of cylinders of an engine or engine cylinders. The diameter of these holes is called the bore of an engine.
