#### **Amuse-Bouche: the Taste of Art**

Springer Nature

The book presents an interdisciplinary and cross-genre study of the relationship between culture and psychopathology as concerns their essence, mutual influence on symptom formation, and on manifestation in mystical states, mental disorders, and treatment. Predictions about cultural trends and their impact on pathology and identity are made.

Daimon

The book contains researchers' scientific statements and ideas covering the stages of the evolution of the Romanian economy and society during the one hundred years since the Great Union and the representation of Romania in European and world context, with a special focus on sectoral problems.

#### **New Trends in Business Management**

Springer  
 The book presents the birth of the psychoanalytical movement on Polish lands in the years 1900-1918, on the broad background of the assimilation

processes of Polish Jews. The author points out that Freud's theory played the role of "the promised land", as it was associated with the idea of the establishment of a more just social order.

*Biomedical Nanostructures* Daimon  
An International conference on New Trends in Business Management was organized by Immanuel Business School with overseas partners Seattle Pacific University, Spring Harbor University and many others, which provided an opportunity to compile a book with collection of conference research papers related to new trends in business management. The conference helped in creating knowledge based outcomes through robust interaction between corporate delegates, academicians, practitioners, research scholars and management Students. The research papers on new trends in business management with sub-topics Online Marketing, Trends in Training and Development, Legal aspects of Business, Good Service Tax, Demonetization, Green Marketing, Digital Marketing, Consumer Behavior, E-Commerce, Corporate Social Responsibility, Organizational Development and Change were presented by authors in lucid way. Highly learned, eminent faculty from different esteemed educational institutions across the globe, experienced persons from industries and management students have contributed more than 40 papers on different management areas. We hope that readers of this book will gain insights of current fluctuations and upcoming trends in Business Management.

*Branchenkennzahlen 2017/2018* Random House Books for Young Readers  
You might be wondering how it is possible to write an entire book on fish

from a psychological standpoint. Apart from the biological creatures which are, in themselves, fascinating creatures, there is a rich palette of traditional folklore, fairy tales and mythological stories about fish. It is, therefore, not surprising that the fish often rises up out of the depths of the soul of modern man into his dreams. We all dream, even if we are often not aware of it. We also know that both man and animals become ill if they are prevented from dreaming over a longer period of time. Thus, we may assume that, in some unknown way, dreaming keeps us healthy. Modern Depth Psychology has shown us that dreams produce images or symbols that convey meaning. This helps us to better understand both our own human nature and the nature of our invisible companions who influence our destiny. In this sense, dreams are a source of self-knowledge. On a collective level, they can provide us with information about our vital, inner, spiritual processes that shape both our culture and our communal lives. The fish is an especially meaningful symbol that appears to be pointing towards a possible, fundamental psychic renewal of our time from out of the depths of the unconscious psyche. The author investigates these themes in important dreams had by people today. Whilst moving within the field of dream interpretation and Depth Psychology, the book is also accessible to the interested layperson.

*The Specter of Capital Cross-Roads*  
Based on a groundbreaking study, analysing data on 200 management practices gathered over a 10 year period. Reveals the effectiveness of the 4+2 practices (4 primary and 2 of 4 possible secondary) practices that really matter -- the ones that, if followed

rigorously, ensure sustained business success. With a new introduction by the authors. With hundreds of well-known management practices and prescriptions promoted by consultants and available to business, which are really effective and contribute to the growth and continued success of a company? Which do little or nothing? Based on the "Evergreen Project," a massive, 5 year study involving the business school faculties of ten universities, the authors set out to find the management practices that truly promote long-term growth and success. Their findings will revolutionize the art and practice of business management. The book shows that there are essentially six management practices that all successful companies must master simultaneously. They range from focusing on a strategy of growth to maintaining the depth and quality of human talent in the organization.

Realism and Antirealism in Kant's Moral Philosophy Walter de Gruyter GmbH & Co KG

The debate between moral realism and antirealism plays an important role in contemporary metaethics as well as in the interpretation of Kant's moral philosophy. This volume aims to clarify whether, and in what sense, Kant is a moral realist, an antirealist, or something in-between. Based on an explication of the key metaethical terms, internationally recognized Kant scholars discuss the question of how Kant's moral philosophy should be understood in this regard. All camps in the metaethical field have their inhabitants: Some contributors read Kant's philosophy in terms of a more or less robust moral realism, objectivism, or idealism, and some of them take it to be a version of constructivism, constitutionism, or brute

antirealism. In any case, all authors introduce and defend their terminology in a clear manner and argue thoughtfully and refreshingly for their positions. With contributions of Stefano Bacin, Jochen Bojanowski, Christoph Horn, Patrick Kain, Lara Ostaric, Fred Rauscher, Oliver Sensen, Elke Schmidt, Dieter Schönecker, and Melissa Zinkin.

*Psychology of the Operator of Technical Devices* Stanford University Press

The 14th volume of ToPNoC contains revised and extended versions of a selection of the best workshop and tutorial papers presented at the 39th International Conference on Application and Theory of Petri Nets and Concurrency, Petri Nets 2018, and the 18th International Conference on Application of Concurrency to System Design, ACS D 2018. The 10 papers cover a diverse range of topics including model checking and system verification, refinement, and synthesis; foundational work on specific classes of Petri nets; and innovative applications of Petri nets and other models of concurrency. Application areas covered in this volume are: process mining, verification, formal semantics, communication protocols, business processes, distributed systems, and net synthesis. Thus, this volume gives a good overview of ongoing research on concurrent systems and Petri nets.

### **Animals and Animal Dreams**

Modernity in Question

Doris Klutz conducted insider intervention research in the company she was working for to investigate organisational and group dynamics. Furthermore, she highlights aspects that insider intervention researchers should consider during conducting the research. One of the results shows that due to the real family connections in the company,

there is a high chance that employees tend to transfer their own family structures into the company. The method of intervention research can be very valuable for a company if it is truly lived. The benefit for a company is, at best, sustainable self-development.  
*Culture and Psychopathology* CSIRO PUBLISHING

Written by world authorities, this reference explores the utilization and advancement of state-of-the-art imaging modalities for the analysis of pulmonary function-providing an up-to-date and global perspective of imaging applications with detailed contributions from experts in Europe, North America, Japan, and Australia.

The Kids' Whole Future Catalog  
Random House Books for Young Readers  
Reasons Why Not Studies in Social Sciences, Philosophy and History of Ideas

The author of the book discusses the essence and social consequences of the postmodern era in the field of psychology of work and technology. He describes the relationship between the human being and the goals achieved through the use of technical tools, which is of interest to the industrial and engineering psychology. The second chapter provides a detailed classification of operator-machine system models: technocentric, anthropocentric, and operator-machine interface. In the third chapter, the author focuses on psychological characteristics of the operator-machine-interface system based on the example of jet plane pilot's activity. The fourth chapter focuses on learning new operator activities and training of operator's action in

comprehensive simulators as analogues of work experience. In the fifth chapter the author examines occupational safety and reliability of the operator-machine system. In the sixth chapter, the author discusses the computer as a virtual operator serving the optimization of the quality of life.

*The Romanian Economy. a Century of Transformation (1918-2018)* CRC Press  
One literally can't argue about taste, but there is certainly a lot to say about it. How is it articulated within the spectrum of our senses? And how are perceptions of taste created in the first place? Can taste be manipulated? How can taste be verbalized? What role does the experience of taste play in social interaction and as artistic material? After the Museum Tinguely addressed visitors' senses with Belle Haleine: The Scent of Art and Please Touch: Art's Sense of Touch, an interdisciplinary symposium on taste and food culture followed in early 2019, which put the many fields of human activity affected by taste to the test. This book contains the resulting essays written from the points of view of art and cultural history, as well as psychology, linguistics, and biochemistry.

The Kids' Whole Future Catalog Springer Nature

On the basis of a lifelong relationship with cats, dogs, and horses, Regina Abt a graduate of the Zurich C.G. Jung Institute in 1985 who worked for many years with Dr. M.-L. von Franz, has the ability to understand the dream motifs of cat, dog, and horse in their unique and life-guiding ways. The personal and archetypal dimension of the psyche is nourished by this book. Animals in dreams tell us something about our own inner instinctual nature from which civilized man has increasingly distanced himself.

They provide indications as to how we can once again show due respect for this instinctual life energy with its hidden knowledge, and also show us where we underestimate and violate them. In this book we look at animal dreams as a symbolic expression of the instinctual, that is, unconscious psychic functioning of man, which is crucial for the well-being of both the individual and the society.

*Dantes Spuren in Italien*

Branchenkennzahlen 2017/2018  
The Kids' Whole Future Catalog

The importance of lubricants in virtually all fields of the engineering industry is reflected by an increasing scientific research of the basic principles. Energy efficiency and material saving are just two core objectives of the employment of high-tech lubricants. The encyclopedia presents a comprehensive overview of the current state of knowledge in the realm of lubrication. All the aspects of fundamental data, underlying concepts and use cases, as well as theoretical research and last but not least terminology are covered in hundreds of essays and definitions, authored by experts in their respective fields, from industry and academic institutes.

*Functional Lung Imaging* Harper Collins

The aim of this book is the analysis of Kazimierz Ajdukiewicz's meta-epistemological project of the semantic theory of knowledge and its implementations to solve certain traditional epistemological problems and their metaphysical consequences. This project claims that cognitive problems need to be approached from the perspective of language. One of the results of this analysis is the thesis that the philosophical-linguistic legitimisation for the meta-epistemological project is the philosophy of Edmund Husserl from

his Logical Investigations. This is the philosophy that makes it possible to speak reasonably of a close relation between thinking and language and provides thereby the legitimisation for this project.

*What Really Works* Routledge

A scarcity of natural resources. The challenge to protect biodiversity and the global climate. Rapid economic growth and urbanisation in Asia and the developing world. Changing demographics and an ageing population. The impact of new digital technologies. Consumer expectations for services, experiences and social interaction. An imperative to innovate. Megatrends are gradual yet powerful trajectories of change that have the potential to throw companies, individuals and societies into freefall. In *Global Megatrends* author Stefan Hajkovicz identifies these seven patterns of global change and tells a story about how the world will change over the next 20 years. The book captures the thinking of many dedicated scientists and researchers who have devoted their careers to exploring and understanding change. The change heralded by megatrends lies beyond our direct control but not beyond our influence. By getting a picture of how the world is changing and what these megatrends are, we can alter our destiny.
