A brief introduction to the importance of oxygen in maintaining plant and animal life.

The Oxygen Breakthrough Basic Health Publications, Inc.

This unique work from acclaimed author Dr. Paul L. Marino (Marino's The ICU Book, The Little ICU Book) presents oxygen as a destructive force in the organic world, as a source of lethal cell injury in humans, describes how humans are designed to withstand the damaging effects of oxygen, and how the excessive and unregulated use of oxygen in clinical practice can be harmful. Describes how oxygen and its reactive metabolites can damage vital cell components (such as cell membranes, DNA, and all varieties of cell proteins) and how oxygen participates in the damaging effects of inflammation, radiation, and aging. Describes the inherent mechanisms for protection against oxidative damage. Highlights the problems in the clinical use of oxygen, and how the current use of oxygen can be harmful. Debunks popular perceptions about oxygen and presents an alternative "paradigm" for the role of oxygen in health and disease. The Oxygen Revolution, Third Edition McGraw-Hill/Appleton & Lange

Cutting-edge research on hyperbaric oxygen therapy (HBOT) as a gene therapy to treat traumatic brain injuries, degenerative neurological diseases, and other disorders Hyperbaric oxygen therapy (HBOT) is based on a simple idea—that oxygen can be used therapeutically for a wide range of conditions where tissues have been damaged by oxygen deprivation. Inspiring and informative, The Oxygen Revolution, Third Edition is the comprehensive, definitive guide to the miracle of hyperbaric oxygen therapy. HBOT directly affects the body at the genetic level, affecting over 8,000 individual genes—those responsible for healing, growth, and anti-inflammation. Dr. Paul G. Harch's research and clinical practice has shown that this noninvasive and painless treatment can help those suffering from brain injury or such diseases as: • Stroke • Autism and other learning disabilities • Cerebral palsy and other birth injuries • Alzheimer's, Parkinson's, multiple sclerosis, and other degenerative neurological diseases • Emergency situations requiring resuscitation, such as cardiac arrest, carbon monoxide poisoning, or near drowning For those affected by these seemingly "hopeless" diseases, there is finally hope in a proven solution: HBOT.

Oxygen Transport, Hypoxia and Cyanosis Jones & Bartlett Publishers

Excerpt from Oxygen Mine Rescue Apparatus and Physiological Effects on Users As the most effective means of putting into concrete form and of testing the feasibility of the recommendations of this report, the Bureau of Mines has attempted to develop an apparatus along the physiological lines for which it calls. During the past two years 7. E. Gibbs, an experienced mechanical engineer, has been at work for the bureau on this problem. Mr. Gibbs, aided by the advice and cooperation of the authors of this report, has produced an apparatus which, in experimental tests, has shown itself superior to the older types, but which has still to be subjected to further tests in service. Its principal features have been patented for the Bureau of Mines, and, if finally successful, will be made available for general use.
