A unique clinical resource, this book shows how to infuse the methods and spirit of motivational interviewing (MI) into group-based interventions. The authors demonstrate how the four processes of MI with individuals translate into group contexts. They explain both the challenges and the unique benefits of MI groups, guiding practitioners to build the skills they need to lead psychoeducational, psychotherapeutic, and support groups successfully. A wealth of clinical examples are featured. Chapters by contributing authors present innovative group applications targeting specific problems: substance use disorders, dual diagnosis, chronic health conditions, weight management, adolescent risk behaviors, intimate partner violence, and sexual offending. This book is in the Applications of Motivational Interviewing series, edited by Stephen Rollnick, William R. Miller, and Theresa B. Moyers.

Evidence-Based Addiction Treatment John Wiley & Sons

Eating disorders, addictions, and substance use disorders are each challenging in their own right, but they also commonly co-occur, causing major challenges for clinicians. This book presents cutting-edge research on the overlap of these complex disorders and reviews integrative assessment strategies and treatment approaches, including enhanced cognitive behavioral therapy, dialectical behavior therapy, abstinence approaches, motivational enhancement, mindfulness meditation, and pharmacotherapy. The issue of whether eating-disordered behaviors such as dieting, binge eating, and excessive exercise are merely other forms of addictive behavior is examined. The authors argue both for and against the concept of food addiction in research, clinical treatment, and public policy. The book will be of interest to psychiatrists, addiction medicine physicians, mental health/substance abuse clinicians, dieticians, researchers, and those affected by the disorders.

Community corrections programs are emerging as an effective alternative to incarceration for drug-involved offenders, to reduce recidivism and improve public health and public safety. Since evidence-based practice is gaining recognition as a success factor in both community systems and substance abuse treatment, a merger of the two seems logical and desirable. But integrating evidence-based addiction treatment into community corrections is no small feat—costs, personnel decisions, and effective, appropriate interventions are all critical considerations. Featuring the first model of implementation strategies linking these fields, *Implementing Evidence-Based Practices in Community Corrections and Addiction Treatment* sets out criteria for identifying practices and programs as evidence. The book's detailed blueprint is based on extensive research into organizational factors (e.g., management buy-in) and external forces (e.g., funding, resources) with the most impact on the adoption of evidence-based practices, and implementation issues ranging from skill building to quality control. With this knowledge, organizations can set realistic, attainable goals and achieve treatment outcomes that reflect the evidence base. Included in the coverage: Determining evidence for "what works." Organization change and technology transfer: theory and literature review. The current state of addiction treatment and community corrections. Unique challenges of evidence-based addiction treatment under community supervision. Assessing suitability of evidence-based practice in real-world settings. A conceptual model for implementing evidence-based treatment in community corrections. *Implementing Evidence-Based Practices in Community Corrections and Addiction Treatment* is a breakthrough volume for graduate- and postgraduate-level researchers in criminology, as well as policymakers and public health researchers.

Motivation is key to substance use behavior change. Counselors can support clients' movement toward positive changes in their substance use by identifying and enhancing motivation that already exists. Motivational approaches are based on the principles of person-centered counseling. Counselors' use of empathy, not authority and power, is key to enhancing clients' motivation to change. Clients are experts in their own recovery from SUDs. Counselors should engage them in collaborative partnerships. Ambivalence about change is normal. Resistance to change is an expression of ambivalence about change, not a client trait or characteristic. Confrontational approaches increase client resistance and discord in the counseling relationship. Motivational approaches explore ambivalence in a nonjudgmental and compassionate way.
