 The remaining 25 (83%) articles involved multivariable analyses; logistic regression (21 of 30, or 70%) was the most prominent type of analysis used, followed by linear regression (3 of 30, or 10%). Interestingly, in 2 of the 30 articles (7%), the terms multivariate and multivariable were used interchangeably.
 Multivariate or Multivariable Regression?
 The term in multivariate means model with more than one variable. Multivariate regression is a part of multivariate statistics. Multivariate regression is a technique used to estimate a single regression model when there is more than one outcome variable. Multivariate regression commonly used a ...

 Applied regression analysis and other multivariable methods
 Multivariate analysis (MVA) is based on the statistical principle of multivariate statistics, which involves observation and analysis of more than one statistical outcome variable at a time. Typically, MVA is used to address the situations where multiple measurements are made on each experimental unit and the relations among these measurements and their structures are important.
