RICHARD RIVERA

Art of Drawing People New Holland Australia(AU)

First published in 1988. Child therapists have long been fascinated by children's human figure drawings and what they reveal about self-image, feelings, and family relationships. Now this comprehensively researched volume provides a valuable introduction to using children's human figure drawings as projective measures in a variety of settings. The principles for interpreting drawings, as well as general and specific indicators, are illustrated in 85 children's drawings. Part I on The Theory deals with the background of projective psychology, discussing art as a projective technique and emphasizing that all behavior, including drawings, reflects personality, attitudes and values. The authors examine the major methods of obtaining diagnostic information and recommend the use of several methods for best results. Part II on The Application examines in detail the projective use of children's human figure drawings to evaluate personality, relationships (particularly in families), group values, and attitudes. In each area, research is presented, directions for administration of various tests are given, and guidelines for interpretation are offered. Significant factors are revealed in numerous children's drawings, accompanied by clinical comments. Of special interest is the presentation of original research on group values among Canadian Indian (Saskatchewan Cree) children and on attitudes of young children toward teachers, doctors and other authority figures as revealed in human figure drawings. For psychologists, social workers, teachers and other child-care professionals, as well as students in these fields, this is an

indispensable basic guide to interpreting human figure drawings.

Figure Drawing and Portraiture Walter Foster

The human figure is one of the earliest topics drawn by the young child and remains popular throughout childhood and into adolescence. When it first emerges, however, the human figure in the child's drawing is very bizarre: it appears to have no torso and its arms, if indeed it has any, are attached to its head. Even when the figure begins to look more conventional the child must still contend with a variety of problems: for instance, how to draw the head and body in the right proportions and how to draw the figure in action. In this book, Maureen Cox traces the development of the human form in children's drawings; she reviews the literature in the field, criticises a number of major theories which purport to explain the developing child's drawing skills and also presents new data.
