Education (UK)

PLEASE NOTE - this is a replica of the print book and you will need paper and a pencil to complete the exercises.

Practising maths at home for just 10 minutes a day with this fun Carol Vorderman times tables workbook will help children improve their multiplication and problem solving skills without growing bored. Carol Vorderman's 10 Minutes A Day 10 Times Tables includes lots of multiplication practice and many word problems that relate to real-life experiences. This maths workbook will ensure boredom is a thing of the past and wow teachers and friends alike. Supports National Curriculum

Why is assessment so important in the teaching-learning process? How should we assess pupils in the primary classroom? *Assessing Learning in the Primary Classroom* is an accessible introduction to the concepts critical to a professional understanding of this vital aspect of a teacher's role. It comprehensively considers the principles underpinning effective assessment, the different forms it can take and the different purposes it serves, both within and beyond the classroom. Linking the latest research and theory with examples of assessment in the classroom, it considers key issues such as: Why we assess How we assess How we ensure quality in assessment: validity and reliability Assessment internal and external to the school Statutory assessment throughout the primary school Local, national and international assessment Using assessment results in pupil, teacher, school and system evaluation *Assessing Learning in the Primary Classroom* is for all students undertaking their PGCE, those working at

masters level, and experienced teachers who wish to broaden their understanding of both the value and pitfalls of educational assessment.

**Yearbook of Agriculture** Editions Quae

The protein molecule is the basic building block of every living entity. Its deficiency leads to restricted growth and development of individuals. Globally, such malnutrition is on the rise due to various reasons such as rapid population growth, stagnation of productivity, and ever-rising costs. Millions of people, especially in developing and under-developed countries, suffer from protein malnutrition and the only possible solution is to encourage farmers to grow high-protein food legume crops in their fields for domestic consumption. This, however, could be possible if farmers are provided with new cultivars with high yield, and resistance to major insects, diseases, and key abiotic stresses. The major food legume crops are chickpea, cowpea, common bean, groundnut, lentil, pigeonpea, and soybean.

Predominantly, the legume crops are grown under a subsistence level and, therefore, in comparison to cereals and horticultural crops their productivity is low and highly variable. The crop breeders around the globe are engaged in breeding suitable cultivars for harsh and changing environments but success has been limited and not up to needs. With the recent development of new technologies in plant sciences, efforts are being made to help under-privileged farmers through breeding new cultivars which will produce more protein per unit of land area. In this book, the contributors analyze the constraints, review new technologies, and propose a future course of crop breeding programs in seven cold and warm season legume crops.

*The Bugliest Bug* Letts and Lonsdale  
40 cute bugs to color! This kids' activity book gives children practice coloring by numbers. This fun coloring book for children is more than just bug coloring practice, but also helps children to learn their numbers and improve their fine motor skills as they color by number. A math coloring book that provides hours of math practice and coloring fun for children ages 4 and up! Each page of this bug color book for kids has a cute new bug. Kids can color ladybugs, bees, butterflies, caterpillars, and more in this math activity book. Children will enjoy using the key to find out what color to use as they reveal the bugs in the picture. A color by numbers book math activity book for kids - making math fun!

**Wolves** McGraw Hill Professional  
Due to the prohibitive cost of synthetic pesticides and the problems of environmental pollution caused by continuous use of these chemicals, there is a renewed interest in the use of botanicals for crop protection. Agricultural entomologists, nematologists, and pathologists the world over are now actively engaged in research into the use of plants to fight agricultural pests and diseases, and to reduce the losses caused by them. *Botanical Pesticides in Agriculture* reviews the research on botanical pesticides used to combat losses due to pests of agricultural importance, with special attention focused on the use of higher plants. This book will serve as the baseline reference work for future research, and many of the botanicals discussed, such as neem, bael, begonia, pyrethrum, tobacco, karanj, and mahuwa, may become integral parts of pest control programs currently being developed. It is believed that botanical pesticides will minimize the undesirable

side effects of synthetic pesticides and help preserve the environment for future generations.

Climate Resilient Agriculture for Ensuring Food Security Scientific Publishers  
Rabbit borrows a book about wolves from the library. He can't put it down! But soon a sinister figure with sharp claws and a bushy tail starts to creep right off the pages. You won't believe your eyes - but if you're a rabbit, you probably should. Brilliantly witty, ingeniously constructed, and with amazing artwork throughout, *Wolves* has thrilled critics and booksellers alike. *Wolves* was Emily Gravett's debut book, winning her the Macmillan Prize for Illustration and her first CILIP Kate Greenaway Award.

*Color by Numbers - Bugs - Math Activity Book for Kids* Scholastic UK

Malts are used in the manufacture of beers, whiskies, foodstuffs, non-alcoholic beverages and confectionery. Placing an emphasis on barley as the most used cereal grain, this book offers an up-to-date account of malt manufacture.

Math, Grade 3 Hide-a-Saurus

This handy tear-off pad is bursting with multiplication sums for children to practise their times tables. Kids can refresh, improve and build up confidence in their abilities as they work through the sheets and build up to trickier calculations. Packed with tear-off sheets that include a range of approaches to practise and consolidate arithmetic skills. Compact and easy to pack in a bag, it's great in the school holidays for children to brush up on their numbers before the new term. Gradually increases in difficulty so children can build up confidence before tackling more challenging sums.

Skill Builders are great tools for keeping children current during the school year or preparing them for the next grade level. A variety of fun and challenging activities provides students with practice and helps introduce basic skills to new learners. This full-color workbook contains appropriate passages and exercises based on national standards for third grade to help ensure that children master necessary math skills before progressing. Skill Builders combines entertaining and interactive activities with eye-catching graphics to make learning and reviewing fun and effective. The compact 6" x 9" size makes this book perfect for school, at home, or on the go. It features 80 perforated, reproducible pages and an answer key.

**Multiply on the Fly** Twinkl

A series of fun poetry collections on a wide variety of topics from water and minibeasts to transport and green issues, previously published as Conkers

Poems, within the Oxford Poem Tree.

This is a further set of ten books in the popular series which includes Ghost Poems, Egg Poems, Star Poems and Monkey Poems.

**Insects** Elsevier

*Climate Resilient Agriculture for Ensuring Food Security* comprehensively deals with important aspects of climate resilient agriculture for food security using adaptation and mitigation measures. Climatic changes and increasing climatic variability are likely to aggravate the problem of future food security by exerting pressure on agriculture. For the past few decades, the gaseous composition of the earth's atmosphere has been undergoing significant changes, largely through increased emissions from the energy, industry and agriculture sectors; widespread deforestation as well as fast changes in land use and land management practices. Agriculture and food systems must improve and ensure food security, and to do so they need to adapt to climate change and natural resource pressures, and contribute to mitigating climate change. Climate-resilient agriculture contributes to sustainably increasing agricultural productivity and incomes, adapting and building resilience to climate change and reducing and/or eliminating greenhouse gas emissions where possible. The information on climate resilient agriculture for ensuring food security is widely scattered. There is currently no other book that comprehensively and exclusively deals with the above aspects of agriculture and focuses on ensuring food security. This volume is divided into fourteen chapters, which include the Introduction, Causes of Climate Change, Agriculture as a Source of Greenhouse Gases, Impacts of Climate Change on

Agriculture, Regional Impacts on Climate Change, Impacts on Crop Protection, Impacts on Insect and Mite Pests, Impacts on Plant Pathogens, Impacts on Nematode Pests, Impacts on Weeds, Impacts on Integrated Pest Management, Climate Change Adaptation, Climate Change Mitigation, and A Road Map Ahead. The book is extensively illustrated with excellent photographs, which enhance the quality of publication. It is clearly written, using easy-to-understand language. It also provides adoptable recommendations involving eco-friendly adaptation and mitigation measures. This book will be of immense value to the scientific community involved in teaching, research and extension activities. The material can also be used for teaching post-graduate courses. It will also serve as a very useful reference source for policy makers.

Progress Report on Pesticides and Related Activities McGraw-Hill Education (UK)

The present book on "Crop Protection Strategies under Climate Change Scenarios" provides the information on i) effects of climate variables [increased temperatures, elevated carbon dioxide levels, varying precipitation patterns and frequency and magnitude of extreme weather events (drought, cyclones, floods, etc.), and elevated levels of atmospheric pollutants (ozone, acid rain, and elevated ultraviolet B) on crop pests; ii) Impacts of climate change induced consequences (expansion of geographical distribution, increase in number of generations, increased overwintering survival, pest population dynamics and outbreaks, risk of introducing invasive alien species, crop-pest interactions, loss of ecological biodiversity, changes in phenology,

increased incidence of insect vectored plant diseases, disruption of plant-pollinator interactions, reduced effectiveness of pest management strategies) on crop pests; iii) Development of modelling approaches to predict future pest change scenarios; and iv) Formulation of sustainable adaptation and mitigation pest management strategies including physical, cultural, chemical, biological, host resistance, and integrated methods under climate change scenarios. This book will be of immense value to scientific community involved in teaching, research and extension activities pertaining to pest management under climate change scenarios. The material in the book can be used for teaching post-graduate courses. The book can also serve as a very useful reference to policy makers and practicing farmers.

**Botanical Pesticides in Agriculture**  
CRC Press

How is honey made? What goes on inside an ant colony? Children can

discover the answers in this book packed with fascinating information and science, then reinforce what they have learned by following step-by-step instructions to make art, craft and modelling projects.

**Big book of themes** Scientific Publishers

All kinds of insects compete to see who is the "bugliest" bug of all, but there is a sinister surprise behind the contest.

*Minibeasts* Simon and Schuster

Rhyming verse presents buggy word problems that can all be solved using multiplication.

**Spyder** Springer Science & Business Media

A fun, interactive activity book based around the popular theme of magic to engage and motivate young learners. This book helps children to practise their times tables, reinforcing what has been taught at school. The books combine fun, magical characters and fantastic illustrations with National Curriculum-focused activities. \*Motivating activities based on the KS1 National Curriculum \*Step-by-step learning introduced by fun characters \*Includes gold stickers to reward achievement
