Ce volume bilingue pose la question des effets des réformes institutionnelles et organisationnelles du marché du travail sur la cohésion sociale. Dans cet ouvrage, le Conseil de l'Europe recherche la conciliation entre ce qui est inévitablement imposé par la mondialisation, c'est-à-dire la réorganisation des paramètres de la concurrence, et la cohésion sociale. La conciliation doit prendre en compte une valeur politique essentielle, la sécurité démocratique, qui se trouve d'abord dans l'emploi : le coût social et sociétal élevé de la précarité le confirme. Néanmoins, sécurité ne signifie pas rigidité et doit se traduire plutôt par la reconnaissance sociale d'un "droit à la transition" qui appelle à la coresponsabilité de tous les acteurs sociaux. La conciliation est plus qu'un devoir politique : elle est le prix de la stabilité qui assure la durabilité sociale.

The aim of this book is to analyze the problem of the intensity of forms in the late Middle Ages and to show how this debate eventually gave rise to a new metaphysical project in the 14th century: the project of quantifying the different types of perfections existing in the universe – that is the project of “measuring being”. Cet ouvrage se propose d’analyser l’histoire du débat relatif à l’intensité des formes au Moyen Âge, et de retracer la manière dont il conduisit au XVe siècle à l’émergence d’un projet métaphysique nouveau : celui de quantifier les perfections contenues dans l’univers et, ainsi, de “mesurer l’être”.

BRILL

The Academy is a prestigious international institution for the

study and teaching of Public and Private International Law and related subjects. The work of the Hague Academy receives the support and recognition of the UN. Its purpose is to encourage a thorough and impartial examination of the problems arising from international relations in the field of law. The courses deal with the theoretical and practical aspects of the subject, including legislation and case law. All courses at the Academy are, in principle, published in the language in which they were delivered in the "Collected Courses of the Hague Academy of International Law .

*De la mesure du temps* Martinus Nijhoff Publishers

Testing of materials and manufactured items is a key element in the process from standard specifications through control and verification during manufacture to trade in actual products. Cooperative agreements and networks are being set up covering reference materials and calibration. This process is becoming more urgent with the development in the European market and other international developments. This book presents international views on this fast changing field, with the main themes of: technical components of test quality; quality assurance in testing laboratories; laboratory accreditation and transnational recognition of test results.

Legal Essays in Tribute to Orrin Kip McMurray Univ of California Press

In accordance with Article 102 of the Charter and the relevant General Assembly Resolutions, every treaty and international agreement registered or filed and recorded with the Secretariat since 1946 is published in the United Nations Treaty Series. At present, the collection includes about 30,000 treaties reproduced in their authentic languages, together with translations into English and French, as necessary. The Treaty Series, where treaties are published in the chronological order of registration, also provides details about their subsequent history (i.e., participation in a treaty, reservations, amendments, termination, etc.). Comprehensive Indices covering 50-volume-lots are published separately.

**History of Virtual Work Laws** Gregorian Biblical BookShop

The book presents a history of classical mechanics by focusing on issues of equilibrium. The historical point of view adopted here

restricts attention to cases where the effectiveness of forces is assessed on the basis of the virtual motion of their points of application. For completeness, hints of the alternative approach are also referred, the Archimedean for ancient mechanics and the Newtonian for modern mechanics. The laws resulting from consideration of virtual motions are named laws of virtual work. The modern formulations of the principle of virtual work are only a particular form of them. The book begins with the first documented formulations of laws of virtual work in the IV century BC in Greece and proceeds to the end of the XIX century AD in Europe. A significant space is devoted to Arabic and Latin mechanics of Middle Ages. With the Renaissance it began to appear slightly different wordings of the laws, which were often proposed as unique principles of statics. The process reached its apex with Bernoulli and Lagrange in the XVIII century. The book ends with some chapters dealing with the discussions that took place in the French school on the role of the Lagrangian version of the law of virtual work and its applications to continuum mechanics.

La Commission du droit international est un organe d'experts, composé de « personnes possédant une compétence notoire en matière de droit international », qui œuvre au développement progressif et à la codification du droit international. Annuaire de la Commission du droit international: Volume I : Comptes rendus de séance; Volume II : Texte des principaux rapports établis au cours de l'année, y compris le rapport annuel à l'Assemblée générale.

*Status of Forces Agreements* CRC Press

Prepared in collaboration with the International Ergonomics Association, this book presents a compilation of 128 illustrated ideas which identify practical and inexpensive solutions to ergonomic problems in the workplace. The checkpoints can be used either to check working conditions on the spot or at the design stage, and are suited to a wide variety of premises. Each checkpoint indicates an action, explains why it is necessary, gives advice on its implementation and other relevant information. Ergonomic issues covered include: materials storage and handling; hand tools; machine safety; improving workstation design; lighting; premises; control of hazardous substances; welfare facilities; and work organisation.

These papers address state-of-the-art knowledge of thermo-hydro-mechanical behaviours of deep argillaceous rocks. They

introduce achievements in laboratory test methods for determining the coupling parameters of deep argillaceous rocks, amongst other things.

[Gravitational Measurements, Fundamental Metrology and Constants](#) CRC Press

This book forms the Proceedings of an International RILEM Symposium, the fourth in the series, on Testing of Bituminous Mixes in Budapest, Hungary, October 1990. The aim of the Symposium is to promote tests for the characterization, design and quality control of bituminous mixes which combine the best features of traditional and modern approaches. Among the topics covered are specimen preparation, tests with unique loading (Marshall test, uniaxial tension and creep tests etc), which are used for mix design or control of mechanical properties, and tests with repeated loading, which give information on fatigue, permanent deformation and moduli, especially for mix design.

*La mesure de l'être* United Nations

Rassesses theories of transition and the social dynamics of white settlers' colonies. Using colonial Quebec under British rule as their case study, the authors demonstrate the social and economic processes that have shaped Quebec.

**Catalogue of Scientific Papers (1800-1863)** Cambridge University Press

Reprint of the original, first published in 1868.

*Mechanical Tests for Bituminous Mixes - Characterization, Design and Quality Control* Univ of California Press

Studies the impact that the advances in philosophy and science had on each other in Greece between 300 B.C. and A.D. 200.

[Test Quality for Construction, Materials and Structures](#) Martinus Nijhoff Publishers

A timely and revealing look at the intertwined histories of science,

art, and racism. 'Race Is Everything' explores the spurious but influential ideas of so-called racial science in the nineteenth and the first half of the twentieth centuries, and how art was affected by it. David Bindman looks at race in general, but with particular concentration on attitudes toward and representations of people of African and Jewish descent. He argues that behind all racial ideas of the period lies the belief that outward appearance—and especially skull shape, as studied in the pseudoscience of phrenology—can be correlated with inner character and intelligence, and that these could be used to create a seemingly scientific hierarchy of races. The book considers many aspects of these beliefs, including the skull as a racial marker; ancient Egypt as a precedent for Southern slavery; Darwin, race, and aesthetics; the purported "Mediterranean race"; the visual aspects of eugenics; and the racial politics of Emil Nolde.
