From the Publisher: Now in full color, this essential text features a visually oriented presentation of dental anatomy, physiology, and occlusion-the foundation for all of the dental sciences. Coverage includes discussions of clinical

considerations, dentitions, pulp formation, and the sequence of eruptions. In addition to detailed content on dental macromorphology and evidence-based chronologies of the human dentitions, this edition also includes flash cards, an updated Companion CD-ROM, and Evolve resources that make this text a comprehensive resource for dental anatomy. Understand the standards of tooth formation and apply them to clinical presentations with the Development and Eruption of the Teeth chapter. Focus on the functions and esthetics of disorders you'll encounter in daily practice with content on TMJ and muscle disorders. Get a concise review of dentition development from in-utero to adolescence to adulthood with the appendix of tooth morphology. All line drawings and essential photos have been replaced with full-color pieces. Sharpen your knowledge with interactive learning tools and expanded content on the Companion CD-ROM including study questions, 360-degree rotational tooth viewing, and animations. Test your knowledge on labeling, tooth numbering, and tooth type traits and prepare for Board exams with flash cards. Find even more study opportunities on the Evolve website with a PowerPoint presentation, flash cards, a test bank, and labeling exercises.

Updated and visually enhanced, the eleventh edition of this market-leading dental text expands its focus on clinical applications and includes dozens of online 360-degree and 3-D tooth animations to give you an unparalleled view of dentitions, pulp formation, the sequence of eruptions, and countless clinical considerations. More than 800 full-color images include detailed, well-labeled anatomical illustrations as well as clinical

photographs. Bolded key terms draw students' attention to essential terminology. Practical appendices include Review of Tooth Morphology with a concise review of tooth development from in utero to adolescence to adulthood; and Tooth Traits of the Permanent Dentition with tables for each tooth providing detailed information such as tooth notation, dimensions, position of proximal contacts, heights, and curvatures. 360-degree virtual reality and 3-D animations on Expert Consult help students refine their skills in tooth identification and examination. Step-by-step videos on Expert Consult demonstrate occlusal adjustments. Labeling exercises challenge students to identify tooth structures and facial anatomy with drag-and-drop labels. Chapter on clinical applications includes practical applications and case studies to prepare students for exams. Topics include root planing and scaling; extraction techniques and forces; relationship of fillings to pulp form and enamel form; and occlusal adjustment of premature occlusal contacts and arch form in relationship to bite splint designs. NEW! Learning objectives and pre-test questions at the start of every chapter focus students' attention on the knowledge and critical thinking expectations for each chapter. NEW! Full-color images have replaced many of the black and white images to give students a more vivid picture of clinical situations and procedures. NEW! The updated 8th edition of this classic reference provides a visually-oriented presentation of dental macromorphology and evidence-based chronologies of the human dentitions, while reflecting definitive shifts in modern dental practice. New features include an enhanced reader-friendly approach, new color illustrations, and a greater emphasis on clinical applications. A new, interactive CD-ROM offers three-dimensional animations of masticatory movements - including tooth contact relationships and temporomandibular joint movements - that bring the text's illustrations to life. Plus, an interactive mock examination mimics the National Board exam for outstanding review and practice. Essential concepts of occlusion relevant to restorative dentistry are covered. Evidence-based chronologies of the human dentitions provide research standards for tooth development and eruption. Dimensions of teeth from all aspects are considered in relation to space problems and arch size. Discussion of bony supporting structures provides information necessary for oral surgery, periodontics, and dental implants. Detailed descriptions and illustrated morphologic

features of usual/unusual teeth essential for learning biologic variation of tooth morphology. Radiographs and pulp chamber and canal morphology in sectioned teeth provide an excellent reference for root canal therapy. Clinically useful chronologies show the age of attainment to avoid damage to developing teeth. Age prediction chronologies can be used to assess the unknown age of a patient. Periodontal therapy is discussed in detail, outlining the relationship of tooth morphology to the periodontium. New lifelike color drawings of the right maxillary and mandibular permanent teeth from the mesial, occlusal, distal, lingual and buccal views are featured in the book and on the CD-ROM. CD-ROM teaches the evaluation of contours of simulated dental restorations in relation to ideal arch form using Quicktime Virtual Reality. An interactive 250 multiple choice question examination on the CD-ROM provides a thorough self-assessment tool. Expanded coverage of the development process of the primary and permanent dentitions related to diagnosing potential space problems and malocclusion. Thorough discussion of the evaluation of temporomandibular joint and muscle disorders including anatomical illustrations of the nerves and muscles of the head and neck region. Appendix of tooth trait categories reviews key information for

students.
