"The theme of The World Development Report 2007 is youth - young people between the ages of 12 to 24. As this population group seeks identity and independence, they make decisions that affect not only their own well-being, but that of others, and they do this in a rapidly changing demographic and socio-economic environment. Supporting young people's transition to adulthood poses important opportunities and risky challenges for development policy. Are education systems preparing young people to cope with the demands of changing economies? What kind of support do they get as they enter the labor market? Can they move freely to where the jobs are? What can be done to help them avoid serious consequences of risky behavior, such as death from HIV-AIDS and drug abuse? Can their creative energy be directed productively to support development thinking? The report will focus on crucial capabilities and transitions in a young person's life: learning for life and work, staying healthy, working, forming families, and exercising citizenship. For each, there are opportunities and risks; for all, policies and institutions matter."

**Community Leadership Development** African Books Collective Since the 1990s, internationalisation has become key for institutions wishing to secure funding for higher education and research. For the academic community, this strategic shift has had many consequences. Priorities have changed and been influenced by new ways of thinking about universities, and of measuring their impact in relation to each other and to their social goals. Debates are ongoing and hotly contested. In this collection, a mix of renowned academics and newer voices reflect on some of the realities of international research partnerships. They both question and highlight the agency of academics, donors and research institutions in the geopolitics of knowledge and power. The contributors offer fresh insights on institutional transformation, the setting of research agendas, and access to research funding, while highlighting the dilemmas researchers face when their institutions are vulnerable to state and donor

influence. Offering a range of perspectives on why academics should collaborate and what for, this book will be useful to anyone interested in how scholars are adapting to the realities of international networking and how research institutions are finding innovative ways to make North-South partnerships and collaborations increasingly fair, sustainable and mutually beneficial.

University Education in Uganda Humanities Press International Considers what aspiring and mature historians need to know about the discipline of history in the United States today.

**Information Day for Undergraduate Admissions ...** Springer Nature

This book is an intellectual journey into epistemology, pedagogy, physics, architecture, medicine and metallurgy. The focus is on various dimensions of African Indigenous Knowledge (AIK) with an emphasis on the sciences, an area that has been neglected in AIK discourse. The authors provide diverse views and perspectives on African indigenous scientific and technological knowledge that can benefit a wide spectrum of academics, scholars, students, development agents, and policy makers, in both governmental and non-governmental organizations, and enable critical and alternative analyses and possibilities for understanding science and technology in an African historical and contemporary context.

...Admissions Criteria Undergraduate Admission to the University of Washington How to Apply for Admission to a University Ucca Strengthening Uganda's Policy Environment for Investing in University Development

Education for Sustainable Development (ESD) is globally acknowledged as a powerful driver of change, empowering learners to make decisions and take actions needed to build a just and economically viable society respectful of both the environment and cultural diversity.

Differentiation and Articulation in Tertiary Education Systems Routledge

Despite the recent expansion of higher education in Uganda, there is still much cause for concern. Enrolment levels lag behind those of much of the rest of the continent; enrolment in technical

universities in only one percent; there is no government science and technology policy for higher education despite an identified social need; the new universities are broadly imitating the old colonial models; and there has been little curriculum reform. This study addresses the state of tertiary education in Uganda and proposes reforms in the following areas: university management; how to manage the current two-tier system of public and private universities; institutional capacity; financing and coping with decreasing resources; curricula design which is appropriate to African development needs; how to correct the imbalance of arts/humanities and science students and shortages of academic staff; access to tertiary education; quality of education; and institutional and academic autonomy. The author is Professor of History and Vice-Rector of the Islamic University of Uganda at Mbali. He has published widely on a range of subjects including secondary and tertiary education, Islam in Uganda and social violence.

This handbook provides an up-to-date, advanced analysis of all relevant issues involved in educational research. The expert contributors represent diverse fields within and outside education, as well as quantitative, qualitative, and mixed method approaches to research.

*Community College Models* Cambridge University Press

The training and development of human capital in Sub-Saharan Africa (SSA) will help countries in the region diversify their economies, carry out economic transformation, and support sustainable growth. Higher education plays a key role in training qualified individuals who will be able to implement new technologies and use innovative methods to establish cost-efficient and effective enterprises and institutions. However, in order for SSA to reap the benefits of this investment in human capital, higher education institutions must secure financing to provide quality training and sound professional prospects to their students. Currently, tertiary education development is unsustainable as resources per student are declining and the quality of education is affected. These issues are particularly pressing in times of financial global crisis, when available resources for tertiary education tend to diminish. The impact of the crisis that

started in 2008 provides a clear illustration of the need to explore innovative ways to diversify and secure financing for higher education in SSA. 'Financing Higher Education in Africa' provides a comprehensive overview of higher education financing in SSA. The book begins with an explanation of the fundamental problems faced by higher education institutions and students in SSA, namely the combined pressure of a rapid growth in demand and a growing scarcity of public resources, and it presents the dramatic consequences of these trends on quality. The book then turns to analyzing and comparing the current funding policies in SSA countries and it provides recommendations for improvement. Finally, the book examines the alternatives to the status quo and the policy tools needed to both diversify resources and allocate them based on performance. It will be of great interest to governments, universities, research institutions, and international organizations throughout the region.

In recent years, Makerere University has experienced increasing student and staff unrest. The academic community is demoralized by tight government controls on spending-- especially by inaction on staff salary demands. Donor support will not be forthcoming without broad policy reform in higher education, rather than piecemeal reform.

The Ethics of Educational Healthcare Placements in Low and Middle Income Countries Springer

This book, which is the eighth volume in the 12-volume book series Globalisation, Comparative Education and Policy Research, presents scholarly research on major discourses in

decentralisation, school-based management (SBM) and quality in education globally. This book, which focuses on decentralisation and SBM as a governance strategy in education, presents theoretical aspects of the phenomenon of decentralisation/privatisation and contextualises them within the education research literature. It provides an easily accessible, practical yet scholarly source of information concerning the dynamics of decentralisation and SBM that normally take place when reforms are instituted to decentralize authority and power. Above all, the authors offering the latest findings regarding major discourses in decentralisation, SBM and quality in educational systems in the global culture emphasise aspects of that dynamic interactive process (see also Geo-Jaja 2006a; Gamage and Sooksomchitra 2006, Zajda 2009). This dynamic interaction in the process that is implicit in the title of the book is reified by calls for restructuring of schools following the idea that schools are not promoting human rights, social cohesion and sustainable development. The chapters as a source book of ideas for researchers, practitioners and policy makers in decentralisation and SBM in education contribute to the educational literature while enhancing the understanding of the larger dynamics involved in educational reform. It offers a timely overview of current issues affecting decentralisation in education in the global culture.

Subversion as Foreign Policy Edward Elgar Publishing

This book examines the current state of elective placements of medical undergraduate students in developing countries and their impact on health care education at home. Drawing from a recent case study of volunteer deployment in Uganda, the authors provide an in-depth evaluation of the impacts on the students themselves and the learning outcomes associated with placements in low resource settings, as well as the impacts that these forms of student mobility have on the host settings. In addition to reviewing the existing literature on elective placements, the authors outline a potential model for the future development of ethical elective placements. As the book concurs with an increasing international demand for elective placements, it will be of immediate interest to universities, intermediary organizations, students as consumers, and hosting organisations in low-resource settings. This work was published by Saint Philip Street Press pursuant to a Creative Commons license permitting

*Becoming an African University* Routledge

Coaching has become such a ubiquitous concept that it can connote any professional practice for empowering people and unlocking their potential to make the most of their performance and achieve their goals. This can be accomplished by establishing collaborative relationships between the coach and coachee (the person being coached) based on the effective communication and professional skills of the coach, which include the ability to create a safe environment, ask effective questions, pay attention, listen actively, keep an open mind, stay non-judgmental, paraphrase, challenge, and give and accept constructive feedback while remaining respectful. The higher education sector is one of the key areas that can benefit from adopting coaching practices. Coaching Applications and Effectiveness in Higher Education provides relevant applications of coaching and their effectiveness within the sector of higher education. This branches out to teaching and learning and involves students, staff, and staff development. Chapters include information on coaching models, coaching in blended environments and with technology, coaching effectiveness, and coaching equity. This book is ideal for researchers working in the field of coaching and higher education in different disciplines, coaches, HR and management, policymakers, researchers, academicians, and students who want to improve their understanding of where coaching can be applied in higher education and its effectiveness.

The Economic Value of Education Pine Forge Press

The development of leadership capacities addresses a vital and continuing need in communities and organizations as they attempt to adapt to a wide range of social, economic, environmental, and political changes. Leadership development activities that focus on building new skills and fostering new ideas directly shape local and organizational capacity. At the organizational level, leadership is a valued resource as organizations are faced with challenges of limited resources, funding, and other capacities. Community leadership operates within a different domain; an environment with different dynamics, structures, and goals. Community leadership is distinctive in that leaders often do not have formal training or authority to dictate and facilitate change. Instead, community

leaders must rely on informal networks of diverse citizens, each with a unique local capacity, as the basis for change. This book brings together classic and contemporary articles drawn from Community Development. Divided into two sections, the book begins with a range of seminal leadership theory and conceptualization pieces. These have been instrumental in shaping leadership development in a wide range of settings. Following the theory section, a variety of research and application chapters are presented. These chapters operationalize theory through applied research and programming, and provide replicable frameworks for future research and programs. This book is a compilation of articles published in the journal Community Development.

**How to Apply for Admission to a University** World Bank Publications

Increasingly, students worldwide are seeking post-secondary education to acquire new skill-sets and credentials. There is an explosion of community college models that provide educational opportunities and alternative pathways for students who do not fit

the traditional higher educational profile. This book focuses on economic models to help local and national economies develop strong workforce training, humanitarian models to bring about social mobility and peace, transformative models to help institutions expand and keep up with societal needs, and newly created models that respond to the educational and training needs of a constantly changing world. These models seek to capture the imagination of those who are committed to learning about what works in higher education and in particular, the impact community college models are having on the changing nature of world social, political and economic landscapes. With contributors representing 30 countries, this book presents an international perspective.

\*THIS BOOK WILL SOON BE AVAILABLE AS OPEN ACCESS BOOK\*

This book is a valuable resource for policymakers and practitioners as it brings insights mainly from developing countries where relatively less research activity takes place. It is also a valuable resource for courses in mathematics education in the teacher education colleges, and departments of education in the sub-Saharan Africa region. In the increasingly global and technological world mathematics is seen as a significant gatekeeper of opportunities for social and economic advancement and mobility. Hence, countries and development agencies in the broader sub-Saharan Africa region are looking towards increasing access to relevant and high-quality secondary education as a lever towards economic development. Policy makers and other key decision makers in education look towards improvement in

mathematics teaching and learning as a key focus in education reform. In the East Africa region also a number of initiatives have been taken at the national level in the respective countries to improve the quality of mathematics education. This book provides an in-depth comparative analysis of the developments and issues in mathematics education in Kenya, Tanzania, Rwanda and Uganda, and advances our understanding of the state of secondary mathematics education in East Africa.

Strengthening Uganda's Policy Environment for Investing in University Development University of Washington Press

This report reviews engineering's importance to human, economic, social and cultural development and in addressing the UN Millennium Development Goals. Engineering tends to be viewed as a national issue, but engineering knowledge, companies, conferences and journals, all demonstrate that it is as international as science. The report reviews the role of engineering in development, and covers issues including poverty reduction, sustainable development, climate change mitigation and adaptation. It presents the various fields of engineering around the world and is intended to identify issues and challenges facing engineering, promote better understanding of engineering and its role, and highlight ways of making engineering more attractive to young people, especially women.--Publisher's description.
