WISE LAYLAH

Site Characterization and Design of On-site Septic Systems Shelter Publications, Inc.

Tells how to obtain necessary permits, locate water, choose the right drilling technique, select and prepare a septic

system, and connect the system to one's home.

The Virginia Register of Regulations
Dearborn Real Estate

This valuable reference delineates the ground water quality concerns associated with the planning and usage of septic tank systems. Septic tank systems represent a significant source of ground water pollution in the United

States. Since many existing systems are exceeding their design life by several-fold, the usage of synthetic organic chemicals in the household and for system cleaning is increasing, and larger-scale systems are being designed and used.

A Septic Tank System for Your Home
ASTM International

Offers practical advice on maintaining and repairing the various parts of septic systems and explains how to install a septic system.

Septic Tank Systems for Low-cost Homes

Dearborn's Practice and Law supplements are the premier source for current and detailed information about state real estate license laws and regulations. These state specific

supplements work in conjunction with any of Dearborn's best selling principles texts, including: Modern Real Estate Practice, Real Estate Fundamentals, or Mastering Real Estate Principles.

North western reporter. Second series. N.W. 2d. Cases argued and determined in the courts of Iowa, Michigan, Minnesota, Nebraska, North Dakota, South Dakota, Wisconsin Alan C Hood

Failing septic systems are a major contributor to nonpoint source pollution that causes significant environmental and public health damage. While 60 million people in the US are serviced by septic systems there is relatively little research on how septic system owners make decisions regarding the maintenance of their systems. Septic system failure rates in the US have been

measured at over 25%(Mohamed 2009; James et al. 2016). Because of these relatively high failure rates, it is particularly important to determine what can be done to encourage homeowners to comply with the needs of their septic systems. This research involves a field experiment to be conducted in 2023 with adult homeowners in Delaware making decisions related to their septic systems. Message treatments will be tested to determine which are most effective at improving homeowners' willingness to improve the maintenance of the septic systems. Specifically, homeowners submit cost-share bids into an auction for a voucher for a local septic system company to come to their house to pump out their system and conduct an inspection to make sure that it is

functioning correctly. This service is valued at approximately \$300. Using a between-subject design, the bid behavior in the control group (no message) will be compared to participants who either receive a social norm treatment (75% of homeowners successfully maintain their septic systems) or a threat message (reminding homeowners that a failing septic system can lead to significant fines imposed by the state government). In addition to the experimental design, we will also gather information about homeowners' baseline knowledge about their septic systems. Based on the results, we will discuss policy options for influencing homeowner behavior and reducing environmental externalities from failing septic systems.

Fine Homebuilding

Septic systems for handling sewage have to be maintained but little information is available on the subject. This manual explains how they work, the potential problems that owners often encounter and how to repair them when they go awry.
