construction principles and methods.

Twentieth-Century Building Materials

Cambridge University Press

Over the concluding decades of the twentieth century, the historic preservation community increasingly turned its attention to modern buildings, including bungalows from the 1930s, gas stations and diners from the 1940s, and office buildings and architectural homes from the 1950s. Conservation efforts, however, were often hampered by a lack of technical information about the

products used in these structures, and to fill this gap Twentieth-Century Building Materials was developed by the U.S. Department of the Interior's National Park Service and first published in 1995. Now, this invaluable guide is being reissued—with a new preface by the book's original editor. With more than 250 illustrations, including a full-color photographic essay, the volume remains an indispensable reference on the history and conservation of modern building materials. Thirty-seven essays written by

leading experts offer insights into the history, manufacturing processes, and uses of a wide range of materials, including glass block, aluminum, plywood, linoleum, and gypsum board. Readers will also learn about how these materials perform over time and discover valuable conservation and repair techniques. Bibliographies and sources for further research complete the volume. The book is intended for a wide range of conservation professionals including architects, engineers, conservators, and material scientists engaged in the conservation of modern buildings, as well as scholars in related disciplines.

Di istana Helios, dewa matahari, lahir seorang anak perempuan. Tetapi Circe anak yang aneh--tidak berkuasa seperti ayahnya, juga tidak memikat seperti ibunya. Karena tak punya teman, Circe mencarinya di dunia manusia, dan mengembangkan kemampuannya sebagai

penyihir. Zeus, yang merasa terancam, mengasingkannya ke pulau terpencil. Circe mengasah bakatnya dan bertemu banyak tokoh paling termasyhur dalam mitologi, di antaranya Minotaur, Daedalus dan Icarus, Medea, dan Odysseus yang lihai. Tetapi wanita yang hanya sendirian menghadapi banyak bahaya, dan Circe tanpa sengaja membangkitkan murka manusia dan dewa-dewa, sehingga mesti berhadapan dengan dewa Olympus yang paling menakutkan dan pendendam.

Untuk melindungi apa yang paling dicintainya, Circe harus mengerahkan seluruh kekuatannya dan memilih dengan tegas, apakah hendak berpihak kepada dewa-dewa yang telah melahirkannya, atau manusia yang telanjur disayanginya.

This book offers a highly accessible introduction to natural language processing, the field that supports a variety of language technologies, from predictive text and email filtering to automatic summarization and translation. With it, you'll learn how to write Python programs that work with large collections of unstructured text. You'll access richly annotated datasets using a

comprehensive range of linguistic data structures, and you'll understand the main algorithms for analyzing the content and structure of written communication. Packed with examples and exercises, *Natural Language Processing with Python* will help you: Extract information from unstructured text, either to guess the topic or identify "named entities" Analyze linguistic structure in text, including parsing and semantic analysis Access popular linguistic databases, including WordNet and treebanks Integrate techniques drawn from fields as diverse as linguistics and artificial intelligence This book will help you gain practical skills in natural language processing using the Python programming language and the Natural Language Toolkit (NLTK) open source library. If you're interested in developing web applications, analyzing multilingual news sources, or documenting endangered languages -- or if you're simply curious to have a programmer's perspective on how human language works -- you'll find *Natural Language Processing with Python* both fascinating and immensely useful.

If the world as we know it ended tomorrow, how would you survive? A nuclear war, viral pandemic or asteroid strike. The world as we know it has ended. You and the other survivors must start again. What knowledge would you need to start rebuilding civilisation from scratch? How do you grow food, generate power, prepare medicines, or get metal out of rocks? Could you avert another Dark Ages, or take shortcuts to accelerate redevelopment? Living in the modern world, we have become disconnected from the basic processes and key fundamentals of science that sustain our lives. Ingenious and groundbreaking, *The Knowledge* explains everything you need to know about everything, revolutionising your understanding of the world. 'A glorious compendium of the knowledge we have lost in the living...the most inspiring book I've read in a long time' Independent 'A terrifically engrossing history of science and technology' Guardian

In god is Not Great Hitchens turned his formidable eloquence and rhetorical energy to the most controversial issue in the world: God and religion. The result is a devastating critique of religious faith god Is Not Great is the ultimate case against religion. In a series of acute readings of the major religious texts, Christopher Hitchens demonstrates the ways in which religion is man-made, dangerously sexually repressive and distorts the very origins of the cosmos. Above all, Hitchens argues that the concept of an omniscient God has profoundly damaged humanity, and proposes that the world might be a great deal better off without 'him'.

Introduction to Modern Economic Growth is a groundbreaking text from one of today's leading economists. Daron Acemoglu gives graduate students not only the tools to analyze growth and related macroeconomic problems, but also the broad perspective needed to apply those tools to the big-picture questions of growth and divergence. And he introduces the economic and mathematical foundations of modern growth theory and macroeconomics in a rigorous but easy to follow manner. After covering the necessary background on dynamic general equilibrium and dynamic optimization, the book presents the basic workhorse models of growth and takes students to the frontier areas of growth theory, including models of human capital, endogenous technological change, technology transfer, international trade, economic development, and political economy. The book integrates these theories with data and shows how theoretical approaches can lead to better perspectives on the fundamental causes of economic growth and the wealth of nations. Innovative and authoritative, this book is likely to shape

how economic growth is taught and learned for years to come. Introduces all the foundations for understanding economic growth and dynamic macroeconomic analysis Focuses on the big-picture questions of economic growth Provides mathematical foundations Presents dynamic general equilibrium Covers models such as basic Solow, neoclassical growth, and overlapping generations, as well as models of endogenous technology and international linkages Addresses frontier research areas such as international linkages, international trade, political economy, and economic development and structural change An accompanying Student Solutions Manual containing the answers to selected exercises is available (978-0-691-14163-3/\$24.95).
