At the Boundaries of Homeownership

Scholastic Inc.

This two-volume book presents outcomes of the 7th International Conference on Soft Computing for Problem Solving, SocProS 2017. This conference is a joint technical collaboration between the Soft Computing Research Society, Liverpool Hope University (UK), the Indian Institute of Technology Roorkee, the South Asian University New Delhi and the National Institute of Technology Silchar, and brings together researchers, engineers and practitioners to discuss thought-provoking developments and challenges in order to select potential future directions. The book presents the latest advances and innovations in the interdisciplinary areas

of soft computing, including original research papers in the areas including, but not limited to, algorithms (artificial immune systems, artificial neural networks, genetic algorithms, genetic programming, and particle swarm optimization) and applications (control systems, data mining and clustering, finance, weather forecasting, game theory, business and forecasting applications). It is a valuable resource for both young and experienced researchers dealing with complex and intricate real-world problems for which finding a solution by traditional methods is a difficult task. *Opening Up Education* Oxford University Press, USA

"This book examines a wide range of innovative approaches for coastal wetlands restoration and explains how we should use both academic research and practitioners' findings to influence

learning, practice, policy, and social change. For conservationists, tidal flats and coastal wetlands are regarded as among the most important areas to conserve for the health of the entire oceanic environment. As the number of restoration projects all over the world increases, this book provides a unique assessment of coastal wetland restorations by examining existing community perceptions and by drawing on the knowledge and expertise of both academics and practitioners. Based on a four-year sociological study across three different cultural settings - England, Japan and Malaysia - the book investigates how citizens perceive the existing environment; how they discuss the risks and benefits of restoration projects; how perceptions change over time; and how governmental and non-governmental organisations work with the various

community perceptions on the ground. By comparing and contrasting the results from these three countries, the book offers guidance for future conservation and restoration activities, with a specific view to working with local citizens to avoid conflict and obtain long-term investment. This book will be of great interest to students and scholars of coastal restoration, wetland conservation and citizen science, as well as environmental sociology and environmental management more broadly. It will also be of use to practitioners and policymakers involved in environmental restoration projects"--

Robotics is undergoing a major transformation in scope and dimension. From a largely dominant industrial focus, robotics is rapidly expanding into human environments and vigorously engaged in its new challenges. Interacting with,

assisting, serving, and exploring with humans, the emerging robots will increasingly touch people and their lives. Beyond its impact on physical robots, the body of knowledge robotics has produced is revealing a much wider range of applications reaching across diverse research areas and scientific disciplines, such as: biomechanics, haptics, neurosciences, virtual simulation, animation, surgery, and sensor networks among others. In return, the challenges of the new emerging areas are proving an abundant source of stimulation and insights for the field of robotics. It is indeed at the intersection of disciplines that the most striking advances happen.

The SpringerTracts in AdvancedRobotics(STAR) is devoted to bringing to the research community the latest advances in the robotics field on the basis of their significance and quality.

Through a wide and timely dissemination of critical - search developments in robotics, our objective with this series is to promote more exchanges and collaborations among the researchers in the community and contribute to further advancements in this rapidly growing field.

The Global status report on road safety 2018 launched by WHO in December 2018 highlights that the number of annual road traffic deaths has reached 1.35 million. Road traffic injuries are now the leading killer of people aged 5-29 years. The burden is disproportionately borne by pedestrians cyclists and motorcyclists in particular those living in developing countries. The report suggests that the price paid for mobility is too high especially because proven measures exist. Drastic action is needed to put these measures in place to meet any future global target that might be set and save lives.

Jamie Reidy is the guy who's been there, done that, and walked away with the insider stories. Inside *Hard Sell: Now a Major Motion Picture LOVE and OTHER DRUGS*, you'll find yourself rooting for Reidy and shocked by the realities of the world that paid his salary. This comedic expose traces Reidy's experiences from Pfizer training to life as the "V-Man," when Reidy became Pfizer's number-one drug rep during the Viagra craze. With equal parts self-confidence and self-mockery, Reidy takes the reader on a hilarious romp through pharma-culture while revealing the controversial side of the drug industry. From viewing a circumcision to gaining a doctor's rapport to providing insight on why doctors choose to prescribe Drug X

over Drug Y, and from how to bargain "sigs" and "scripts" to why the Viagra pill is shaped as a diamond, Reidy discloses everything. A witty, behind-the-scenes look at an industry that touches everyone in America with a prescription, *Hard Sell* uncovers truths about the pharmaceutical industry you'd rather not know and practices you'd like to believe weren't employed. *Hard Sell* has been adapted into a major motion picture starring Jake Gyllenhaal and Anne Hathaway.

The new institutional economics is one of the the most important new bodies of theory to emerge in economics in recent years. The contributors to this volume address its significance for the developing world. The book is a major contribution to an area of debate still in its formative phase. The book challenges the orthodoxies of development, espec *The Gentle Weapon* Routledge
An ideal core text for introductory courses, *Medical Anthropology: A Biocultural Approach, Second Edition*, offers an accessible and contemporary overview of this rapidly expanding field. For each health issue examined in the text, the

authors first present basic biological information on specific conditions and then expand their analysis to include evolutionary, historical, and cross-cultural perspectives on how these issues are understood. *Medical Anthropology* considers how a biocultural approach can be applied to more effective prevention and treatment efforts and underscores medical anthropology's potential to improve health around the world.
