LIN BARRON

Springer

The purpose of this book is to present a synopsis of what is known about substances that have toxic properties injurious to the eyes, disturbing to vision, or affecting eyes in other unwanted ways. The coverage is truly comprehensive, encompassing local and systemic, acute and chronic, human and veterinary toxicology of the eye. The text summarizes mechanisms of injury, treatments, and other relevant knowledge for more than 3000 alphabetized substances - essentially all those on which public information is available. Also described are systemic side effects of ophthalmologic drugs, treatment of chemical burns of the eyes, and testing methods and species specificity for toxic effects on the eyes. Facilitating access to this prodigious amount of information is a large index that cross-references substances and effects, including numerous synonyms. This monumental work is a truly definitive text and a highly useful reference book that should be available to every ophthalmologist, emergency room, and medical library.

The work described in this thesis takes a new approach to high-performance control of data quality in databases by integrally combining the ideas of integrity control subsystems and parallel data processing. Integrity control subsystems deal with requirements regarding the quality of data in databases but require high performance processing capabilities. Parallel data processing techniques are used to obtain high performance data processing both to accommodate the requirements of the integrity control subsystems and to deal with the general high demands on database management systems. This combination leads to the notion of integrity control in parallel database systems. This notion is applied in the Transaction Modification approach and prototyped on the PRISMA highly parallel prototype database machine.

Database Support for Workflow Management: The WIDE Project presents the results of the ESPRIT WIDE project on advanced database support for workflow management. The book discusses the state of the art in combining database management and workflow management technology, especially in the areas of transaction and exception management. This technology is complemented by a high-level conceptual workflow model and associated workflow application design methodology. In WIDE, advanced base technology is applied, like a distributed computing model based on the corba standard. The usability of the WIDE approach is documented in this book by a discussion of two real-world applications from the insurance and health care domains. Database Support for Workflow Management: The WIDE Project serves as an excellent reference, and may be used for advanced courses on database and workflow management systems.

This book constitutes the refereed proceedings of the 5th IFIP WG 6.1 International Conference on Distributed Applications and Interoperable Systems, DAIS 2005, held in Athens, Greece in June 2005. The DAIS conference was held as a joint event in federation with the 7th IFIP WG 6.1 International Conference on Formal Methods for Open Object-Based Distributed Systems, FMOODS 2005. The 16 revised full papers and 5 revised short papers presented were carefully reviewed and are organized in topical sections on context and location, interoperability architectures, methodological aspects, service discovery, configurable communication, and performance and optimization.

"This report is about the legal problems faced by Australian business in international commerce. It is a feasibility report assessing the scope for law reform in this area. The report focuses on civil remedies in international commerce and their implications for reform." -- from the Overview, p. [7].

Mastering Statutory Interpretation explains the methods of interpreting statutes, including a discussion of the various theories and canons of interpretation. The book begins by exploring these theories and identifying the sources of meaning the theorists use to interpret statutes, including intrinsic, extrinsic, and policy-based. Throughout, the text uses the major cases in each area of study to explain how the canons work in practice. Finally, each chapter provides a concise roadmap and summary to introduce and encapsulate the most important material. The second edition adds one new chapter to address the administrative issues that faculty teaching legislation and regulation need, as well as a running hypothetical to help students better implement what they are learning.

We welcome you to the Second International Conference on E commerce and Web Technology (ECWEB 2001) held in conjunction with DEXA 2001 in Munich, Germany. This conference, now in its second year, is a forum to bring together researchers from academia and commercial developers from industry to discuss the state of the art in E commerce and web technology and explore new ideas. We thank you all for coming to Munich to participate and debate the new emerging advances in this area. The research presentation and discussion during the conference will help to exchange new ideas among the researchers, developers, and practitioners. The conference program consists of an invited talk by Hannes Werthner, University of Trento, Italy, as well as the technical sessions. The regular sessions cover topics from XML Transformations and Web Development to User Behavior and Case Studies. The workshop has attracted more than 80 papers and each paper has been reviewed by at least 3 program committee members for its merit. The program committee have selected 31 papers for presentation. We would like to express our thanks to the people who helped put together the technical program: the program committee members and external reviewers for their timely and rigorous reviews of the papers, the DEXA organizing committee for their help in administrative work and support, and special thanks to Gabriela Wagner for always responding promptly.
