If you're new to the safety field, or if you've just been given safety responsibilities, making sense of your compliance responsibilities can be overwhelming! This newly updated and easy-to-read guide is your key to understanding and complying with the Title 29 Code of Federal Regulations (CFR) Parts 1900-1910.END. It addresses common OSHA regulations in alphabetical order and helps eliminate the regulatory circles that make compliance difficult. Filled with illustrations, recommendations, and sample documents, this reference contains 34 sections on selected topics from the CFRs that all general-industry safety professionals must understand, including the forklift, personal protective equipment, and respiratory standards; workplace ergonomic standard; and Hazardous Waste Operations and Emergency Response (HAZWOPER). Most librarians know the importance of disaster preparedness. Many disasters could have been prevented altogether or have had reduced impact if institutions had been better prepared. This resource guide suggests how disaster preparedness can be achieved at cultural institutions. Twenty-three basic resource articles are presented to introduce disaster preparedness. They deal with the safety of collections rather than the safety of staff, and related issues such as security and environmental control are not addressed. Of the materials that cover what to do once a disaster has occurred, most emphasize water damage because so many causes of disaster result in water damage. The resource guide is supplemented by a list of 23 selected readings. When a choice had to be made between a readily available source and one that was difficult to obtain, the hard-to-obtain one was included in the resource guide, and a reference to the other was provided in the bibliography. The basic processes for disaster

preparedness include: (1) brainstorming potential disasters; (2) investigating responses to past disasters; (3) outlining a disaster plan; (4) determining remaining needs; and (5) developing recommendations. (SLD)

This book presents a treatise on the topic of business and industrial security and loss control as it applies to the protection of assets and personnel. The material in this thoroughly revised and updated second edition will enable law enforcement officers, security/loss control personnel and business managers to view security/loss control needs from a broad perspective and thus devise security measures that will reflect a well-thought-out systems approach. The book contains a wide range of information, and is presented in terms that will be meaningful to readers that do not have formal training or experience in the field of security and loss control. The information is of a practical nature which, if applied in a variation that is consistent with specific needs, will tailor a program that will result in a well-understood balanced systems approach. Through further understanding, the effectiveness of police and security personnel is enhanced as they perform crime prevention duties and assist local businesses in upgrading security measures. Replete with numerous illustrations and tables, the author provides a security/loss control survey for businesses, plus an overview of security for both businesses and industries. Specialized chapters on executive protection, fire dynamics and hazardous materials, security cameras, loss control surveys, loss control manager participation, and managerial leadership are included.
