Practical Language

Testing equips you with the skills, knowledge and principles necessary to understand and construct language tests. This intensely practical book gives guidelines on the design of assessments within the classroom, and provides the necessary tools to analyse and improve assessments, as well as deal with alignment to externally imposed standards.

Testing is situated both within the classroom and within the larger social context, and readers are provided the knowledge necessary to make realistic and fair decisions about the use and implementation of tests.

The book explains the normative role of large scale testing and provides alternatives that the reader can adapt to their own context. This fulfils the dual purpose of providing the reader with the knowledge they need to prepare learners for tests, and the practical skills for using assessment for learning.

*Practical Language Testing* is the ideal introduction for students of applied linguistics, TESOL and modern foreign language teaching as well as practicing teachers required to design or implement

language testing programmes. The book is supported by frequently updated online resources at

This is followed by two comprehensive mock examinations, each

covering a spread of topics and skills as outlined in the new RCGP GP curriculum. The reader is provided with the full candidate and patient notes for each station, followed by a comprehensive discussion of the areas that the station is testing, and the points that should be covered by the candidate in order to get the best marks. Hodder Education

This book helps readers pull together the knowledge and communication skills required for success in the consultation components of the MRCGP exam, namely the Clinical Skills Assessment (CSA) and the Clinical Observation Tool (COT). Rather than learning by rote, this book promotes a methodical, step-wise approach which will enable you to easily identify the type of case presenting, and to work out exactly what you need to demonstrate for a successful consultation. The book features a number of cases to test and enhance your skills, in three formats: 13 teaching cases- these are very detailed cases which provide you with a great deal of support and advice, including: suggested approaches to the consultation, model answers, background knowledge required, and the theoretical

underpinnings of the consultation. 20 long cases- these build on the knowledge gained in the teaching cases and feature detailed analysis to help you develop an ordered, step-wise approach to data gathering, clinical management and interpersonal skills. 15 shorter practice cases- these help refine the skills you have learnt in working through the earlier cases. These cases come with marking schemes and can be used either alone or in small groups. Once you have worked through the book and refined this methodical approach, you will be able to approach any consultation confident in the knowledge that you possess the tools to succeed. Note that this edition does not contain a DVD. The 13 video cases in the previous edition have been replaced by teaching cases.
