Decades of research have demonstrated that the parent-child dyad and the environment of the family"which includes all primary

caregivers"are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when

a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any

number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by

technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices

that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

A Wrinkle in Time is the winner of the 1963 Newbery Medal. It was a dark and stormy

night—Meg Murry, her small brother Charles Wallace, and her mother had come down to the kitchen for a midnight snack when they were upset by the arrival of a most disturbing stranger. "Wild nights are my glory," the unearthly stranger told them. "I just got caught in a downdraft and blown off course. Let me sit down for a moment, and then I'll be on my way. Speaking of ways, by the way, there is such a thing as a tesseract." A tesseract (in case the reader doesn't

know) is a wrinkle in time. To tell more would rob the reader of the enjoyment of Miss L'Engle's unusual book. *A Wrinkle in Time*, winner of the Newbery Medal in 1963, is the story of the adventures in space and time of Meg, Charles Wallace, and Calvin O'Keefe (athlete, student, and one of the most popular boys in high school). They are in search of Meg's father, a scientist who disappeared while engaged in secret work for the government on the tesseract problem.

 Darwin's Medicine is the sequel to Brian D. Smith's influential and critically acclaimed *Future of Pharma* (Gower, 2011). Whereas the earlier book predicted the evolution of the pharmaceutical market and the business models of pharmaceutical companies, *Darwin's Medicine* goes much deeper into the drivers of industry change and how leading pharmaceutical and medical technology companies are adapting their strategies, structures and capabilities in

practice. Through the lens of evolutionary science, Professor Smith explores the speciation of new business models in the Life Sciences Industry. This sophisticated and highly original approach offers insights into: The mechanisms of evolution in this exceptional industry; The six great technological and social shifts that are shaping its landscape; The emergence of 26 distinct, new business models; and The lessons that enable firms to direct and accelerate their own

evolution. These insights map out the industry's complex, changing landscape and provide an invaluable guide to those firms seeking to survive and thrive in this dynamic market. The book is essential reading for anyone working in or studying the pharmaceutical, medical technology and related sectors. It provides a unique and novel way of making sense of the transformation we can see going on around us and a practical, focused approach to managing a

firm's evolutionary trajectory.

Stanley Yelnats is under a curse. A curse that began with his no-good-dirty-rotten-pig-stealing-great-great-grandfather and has

since followed generations of Yelnatses. Now Stanley has been unjustly sent to a boys' detention center, Camp Green Lake, where the boys build character by spending all day, every day digging holes exactly five feet wide and five feet deep. There is no lake at Camp Green Lake. But there are an awful lot of holes. It doesn't take long for Stanley to realize there's more than character improvement going on at Camp Green Lake. The boys are digging holes because the

warden is looking for something. But what could be buried under a dried-up lake? Stanley tries to dig up the truth in this inventive and darkly humorous tale of crime and punishment—and redemption. "A smart jigsaw puzzle of a novel."

Learning disabilities are among the most common disabilities experienced in childhood and adulthood. Although identifying learning disabilities in a school setting is a complex process, it is particularly challenging in low- and middle-income countries that lack the appropriate resources, tools, and supports. This guide provides an introduction to learning disabilities and describes the processes and practices that are necessary for the identification process. It

also describes a phased approach that countries can use to assess their current screening and evaluation services, as well as determine the steps needed to develop, strengthen, and build systems that support students with learning disabilities. This guide also provides intervention recommendations that teachers and school administrators can implement at each phase of system development. Although this guide primarily addresses learning disabilities, the

practices, processes, and systems described may be also used to improve the identification of other disabilities commonly encountered in schools.

The Writing Revolution
National Academies Press

"HELP! My Students Can't Write!" Why You Need a Writing Revolution in Your Classroom and How to Lead It. The Writing Revolution (TWR) provides a clear method of instruction that you can use no matter what subject or grade level you teach. The model, also known as The Hochman Method, has demonstrated, over and over, that it can turn weak writers into strong communicators by focusing on specific techniques that match their needs and by

providing them with targeted feedback. Insurmountable as the challenges faced by many students may seem, TWR can make a dramatic difference. And the method does more than improve writing skills. It also helps: Boost reading comprehension Improve organizational and study skills Enhance speaking abilities Develop analytical capabilities TWR is as much a method of teaching content as it is a method of teaching writing. There's no separate writing block and

no separate writing curriculum. Instead, teachers of all subjects adapt the TWR strategies and activities to their current curriculum and weave them into their content instruction. But perhaps what's most revolutionary about the TWR method is that it takes the mystery out of learning to write well. It breaks the writing process down into manageable chunks and then has students practice the chunks they need, repeatedly, while also learning content.

Family caregiving affects millions of Americans every day, in all walks of life. At least 17.7 million individuals in the United States are caregivers of

an older adult with a health or functional limitation. The nation's family caregivers provide the lion's share of long-term care for our older adult population. They are also central to older adults' access to and receipt of health care and community-based social services. Yet the need to recognize and support caregivers is among the least appreciated challenges facing the aging U.S. population. Families Caring for an Aging America examines the prevalence and nature

of family caregiving of older adults and the available evidence on the effectiveness of programs, supports, and other interventions designed to support family caregivers. This report also assesses and recommends policies to address the needs of family caregivers and to minimize the barriers that they encounter in trying to meet the needs of older adults.

In *Gift and Giver*, leading New Testament scholar Craig Keener takes a probing look at the various evangelical understandings of the role of the Holy Spirit in the church. He explores topics such as spiritual gifts, the fruit of the Spirit, the Spirit's power for evangelism, and hearing God's voice. His desire is for Christians to "work for consensus, or at least for unity in God's work despite our differences on secondary matters." Employing a helpful narrative approach and an

ample number of stories, Keener enters into constructive dialogue with Pentecostals, moderates, and cessationists, all the while attempting to learn from each viewpoint. He seeks to bridge the gap between cessationists and Pentecostals/charismatics by urging all Christians to seek the Holy Spirit's empowerment. His irenic approach to this controversial issue has been endorsed by charismatics and non-charismatics alike. Sure to provoke helpful dialogue on a topic that has caused

unfortunate divisions within the church, *Gift and Giver* will be a valuable addition to college and seminary courses on pneumatology. It will also be helpful to lay readers interested in a balanced discussion of spiritual gifts. This repackaged edition includes an updated preface and a substantive new afterword. *A Novel*/ National Academies Press
The delivery of high quality and equitable care for both mothers and newborns is complex and

requires efforts across many sectors. The United States spends more on childbirth than any other country in the world, yet outcomes are worse than other high-resource countries, and even worse for Black and Native American women. There are a variety of factors that influence childbirth, including social determinants such as income, educational levels, access to care, financing, transportation, structural racism and geographic variability in birth settings. It is

important to reevaluate the United States' approach to maternal and newborn care through the lens of these factors across multiple disciplines. Birth Settings in America: Outcomes, Quality, Access, and Choice reviews and evaluates maternal and newborn care in the United States, the epidemiology of social and clinical risks in pregnancy and childbirth, birth settings research, and access to and choice of birth settings.

A New York Times Notable Book: In 2025, with the world descending into madness and anarchy, one woman begins a fateful journey toward a better future. “A stunner.” —Flea, musician and actor, TheWall Street Journal Lauren Olamina and her family live in one of the only safe neighborhoods remaining on the outskirts of Los Angeles. Behind the walls of their defended enclave, Lauren’s father, a

preacher, and a handful of other citizens try to salvage what remains of a culture that has been destroyed by drugs, disease, war, and chronic water shortages. While her father tries to lead people on the righteous path, Lauren struggles with hyperempathy, a condition that makes her extraordinarily sensitive to the pain of others. When fire destroys their compound, Lauren’s family is killed and she is forced out into a world that is fraught with danger. With a handful of

other refugees, Lauren must make her way north to safety, along the way conceiving a revolutionary idea that may mean salvation for all mankind.  Maybe it was a grandparent, or a teacher, or a colleague. Someone older, patient and wise, who understood you when you were young and searching, helped you see the world as a more profound place, gave you sound advice to help you make your way through it. For Mitch Albom, that person was Morrie Schwartz, his college professor from nearly twenty years ago. Maybe, like Mitch, you lost track of this mentor as you made your way, and the

insights faded, and the world seemed colder. Wouldn't you like to see that person again, ask the bigger questions that still haunt you, receive wisdom for your busy life today the way you once did when you were younger? Mitch Albom had that second chance. He rediscovered Morrie in the last months of the older man's life. Knowing he was dying, Morrie visited with Mitch in his study every Tuesday, just as they used to back in college. Their rekindled relationship turned into

one final "class": lessons in how to live. Tuesdays with Morrie is a magical chronicle of their time together, through which Mitch shares Morrie's lasting gift with the world. *Second-Generation Memory and Contemporary Children's Literature* Routledge
 Offers 600 entries for bibliographies
A Guide for Caseworkers The Giver Winner of the Children's Literature Association Book Award This book visits a range of textual forms including diary,

novel, and picturebook to explore the relationship between second-generation memory and contemporary children's literature. Ulanowicz argues that second-generation memory — informed by intimate family relationships, textual mediation, and technology — is characterized by vicarious, rather than direct, experience of the past. As such, children's literature is particularly well-suited to the representation of second-generation memory,

insofar as children's fiction is particularly invested in the transmission and reproduction of cultural memory, and its form promotes the formation of various complex intergenerational relationships. Further, children's books that depict second-generation memory have the potential to challenge conventional Western notions of selfhood and ethics. This study shows how novels such as Lois Lowry's *The Giver* (1993) and Judy Blume's *Starring*

Sally J Freedman as *Herself* (1977) — both of which feature protagonists who adapt their elders' memories into their own mnemonic repertoires — implicitly reject Cartesian notions of the unified subject in favor of a view of identity as always-already social, relational, and dynamic in character. This book not only questions how and why second-generation memory is represented in books for young people, but whether such representations of memory might be

considered 'radical' or 'conservative'. Together, these analyses address a

topic that has not been explored fully within the fields of children's

literature, trauma and memory studies, and Holocaust studies.
