The book investigates the problem of how narrative, normally conceived of temporally, encodes its relation to space, especially the territorial space that is the subject of colonial possession and dispossession. The book approaches this problem

by, first, providing a theoretical framework derived from the work of Martin Heidegger and Emmanuel Levinas on the ethical and political implications of human dwelling, and, second, by using this framework to examine cultural forms in two historical periods, colonial America and postcolonial South Africa--the primary interest being the works of Charles Brockden Brown and J. M.

Coetzee. This book is unique in its elaboration of a spatial-or more exactly, territorial--conception of narrative form.

Frank Wood's Business Accounting 2 Pearson UK
An introduction to the theory and methods of empirical asset pricing, integrating classical foundations with recent developments. This book offers a comprehensive advanced introduction to

asset pricing, the study of models for the prices and returns of various securities. The focus is empirical, emphasizing how the models relate to the data. The book offers a uniquely integrated treatment, combining classical foundations with more recent developments in the literature and relating some of the material to applications in investment management. It covers the theory of empirical asset pricing, the main empirical methods, and a range of applied topics.

The book introduces the theory of empirical asset pricing through three main paradigms: mean variance analysis, stochastic discount factors, and beta pricing models. It describes empirical methods, beginning with the generalized method of moments (GMM) and viewing other methods as special cases of GMM; offers a comprehensive review of fund performance evaluation; and presents selected applied topics, including a substantial chapter on

predictability in asset markets that covers predicting the level of returns, volatility and higher moments, and predicting cross-sectional differences in returns. Other chapters cover production-based asset pricing, long-run risk models, the Campbell-Shiller approximation, the debate on covariance versus characteristics, and the relation of volatility to the cross-section of stock returns. An extensive reference section captures the current state of the field.

The book is intended for use by graduate students in finance and economics; it can also serve as a reference for professionals.

This book is open access under a CC BY 4.0 license. This book defines the new field of "Bioeconomy" as the sustainable and innovative use of biomass and biological knowledge to provide food, feed, industrial products, bioenergy and ecological services. The chapters

highlight the importance of bioeconomy-related concepts in public, scientific, and political discourse. Using an interdisciplinary approach, the authors outline the dimensions of the bioeconomy as a means of achieving sustainability. The authors are ideally situated to elaborate on the diverse aspects of the bioeconomy. They have acquired in-depth experience of interdisciplinary research through the university's focus on "Bioeconomy",

its contribution to the Bioeconomy Research Program of the federal state of Baden-Württemberg, and its participation in the German Bioeconomy Council. With the number of bioeconomy-related projects at European universities rising, this book will provide graduate students and researchers with background information on the bioeconomy. It will familiarize scientific readers with bioeconomy-related terms and give scientific background for

economists, agronomists and natural scientists alike.

The Growth and Role of UK Financial Institutions, 1880-1962

Cambridge University Press

This original monograph presents a comprehensive theory regarding the economy of the kingdom of God. The theory and associated model will help individuals make better choices. The research integrates fundamentals of the temporal real economy, and the permanent economy of the kingdom of God, to

present a unified model of human agency. According to the model, effective agents are salt and light in the real economy, arresting corruption and revealing the truth.

Effective agency produces life, peace, and growth. Individual and organizational practices that arrest corruption and reveal truth can resolve longstanding economic grievances. The list of spiritual credence goods is extensive and includes commonly known virtues such as humility, patience, and hope.

Spiritual goods are allocated based on the owner-agent relationship. The quantity of goods the owner supplies is in proportion to an individual's sacrificial offering of time and money. Spiritual goods are stored as heart capital. In a process analogous to the real economy, heart labor applied to heart capital produces desirable outputs. The owner relates to his agents through a heart-inscribed behavioral contract. The owner generally

intervenes in the real economy by communicating with agents rather than by restricting choice. Prior studies across economics, finance, and sociology prove the efficiency of behavioral contracts and communication over restricted choice. Herein researchers will find new testable propositions, and practitioners will find new ideas and practices to live better, more consequential lives. Examples of practical applications include methods of resolving

group-level bias and understanding the purpose of life's difficulties.
