From national
bestselling
author Nick
McDonnell, The
Council of
Animals is a
captivating
fable for
humans of all
ages—dream

rs and cynics alike—who believe (if nothing else) in the power of timeless storytelling. “‘Now,’ continued the cat, ‘there is nothing more difficult than changing an animal’s mind. But I will say, in case I can change yours: humans are more useful to us outside our bellies than in.’” Perhaps. After The Calamity, the animals thought the humans had managed to do themselves in. But, it turns out, a few are

cowering in makeshift villages. So the animals—among them a cat, a dog, a crow, a baboon, a horse, and a bear—have convened to debate whether to help the last human stragglers . . . or to eat them. Rest assured, there is a happy ending. Sort of. Featuring illustrations by Steven Tabbutt *Before the Dinosaurs* Papercutz Do you know what dinosaurs were like?

Look at these pictures of model dinosaurs. Scientists made the models to show us what dinosaurs looked like. Reading Level 5/F&P Level B
The Princeton Field Guide to Prehistoric Mammals First Avenue Editions™ Our day-to-day experiences over the past decade have taught us that there must be limits to our tremendous appetite for energy, natural

resources, and consumer goods. Even utility and oil companies now promote conservation in the face of demands for dwindling energy reserves. And for years some biologists have warned us of the direct correlation between scarcity and population growth. These scientists see an appalling future riding the tidal wave of a worldwide growth of population and technology. A

calm but unflinching realist, Catton suggests that we cannot stop this wave - for we have already overshot the Earth's capacity to support so huge a load. He contradicts those scientists, engineers, and technocrats who continue to write optimistically about energy alternatives. Catton asserts that the technological panaceas proposed by those who would harvest from the seas,

harness the winds, and farm the deserts are ignoring the fundamental premise that "the principals of ecology apply to all living things." These principles tell us that, within a finite system, economic expansion is not irreversible and population growth cannot continue indefinitely. If we disregard these facts, our sagging American Dream will soon shatter completely.

Conquest of
Earth** The
Rosen

Publishing Group, Inc Learn about the Stegosaurus which lived during the Jurassic period. It had large bony plates, which were probably used for temperature control.

Prehistoric Predators

Abrams Books for Young Readers This book details the life of the dinosaur known as Maiasaura. Readers will develop word recognition and reading skills while learning when

Maiasaura lived and what it likely looked like. They will also find out how it lived, from what it ate to how it dealt with enemies. Additional text features and search tools, including a glossary and an index, help students locate information and learn new words.

MEGA Creatures of Ancient Skies Picture Book

Biography "What was the world like millions of years ago? Did early

humans walk on all fours? Did giant sloths lie in trees? Did dinosaurs have feathers? Even as a young girl, Mary Leakey was fascinated by questions like these! In Fossil Huntress: Mary Leakey, Paleontologist, elementary aged children meet Mary as a girl growing up in France and visiting the site of archeological wonders, such as Pech Merle, Fond de Gaume, and La Mouthe. As

an adult, Mary leaps at the chance to travel to Africa, where she spends much of her life working in the field in Tanzania, making discoveries that change the face of paleontology forever. True grit, passion, and high standards for scientific rigor made Mary a pioneer in the field of paleontology! Fossil Huntress is part of a set of four books in the Picture Book Biography series that

introduces pioneers of science to young children."-- *Maiasaura* Hungry Tomato ® Travel millions of years back in time to meet the tyrannosaurus rex! Learn everything from what the tyrannosaurus rex looked like to what it ate, and even where their goliath fossils have been found today. Complete with a More Facts section and bolded glossary terms. Young readers will gather basic

information about the tyrannosaurus rex through easy-to-read, simple text alongside colorful images! Aligned to Common Core standards and correlated to state standards. Abdo Kids is a division of ABDO. *Animal Farm* Princeton University Press When a meteorite lands in Surrey, the locals don't know what to make of it. But as Martians emerge and begin killing

bystanders, it quickly becomes clear—England is under attack. Armed soldiers converge on the scene to ward off the invaders, but meanwhile, more Martian cylinders land on Earth, bringing reinforcements. As war breaks out across England, the locals must fight for their lives, but life on Earth will never be the same. This is an unabridged version of one of the first fictional accounts of

extraterrestrial invasion. H. G. Wells's military science fiction novel was first published in book form in 1898, and is considered a classic of English literature. *The Council of Animals* Simon and Schuster In this book, simple, age-appropriate text introduces readers to mammoths and mastodons, from what they looked like to how they lived. Large, exciting images fill the pages, while

sidebars encourage students to ask questions and think critically about information presented in the text. Additional tools, including a glossary and index, help students build new vocabulary and locate information. *Spinosaurus* The Rosen Publishing Group, Inc This fascinating book is the first volume in a projected cultural history of the United States, from the

earliest English settlements to our own time. It is a history of American folkways as they have changed through time, and it argues a thesis about the importance for the United States of having been British in its cultural origins. While most people in the United States today have no British ancestors, they have assimilated regional cultures which were created by British

colonists, even while preserving ethnic identities at the same time. In this sense, nearly all Americans are "Albion's Seed," no matter what their ethnicity may be. The concluding section of this remarkable book explores the ways that regional cultures have continued to dominate national politics from 1789 to 1988, and still help to shape attitudes toward education, government,

gender, and violence, on which differences between American regions are greater than between European nations. Dinosaurs of the Triassic Cherry Lake The ultimate illustrated guide to the lost world of prehistoric mammals After the mass extinction of the dinosaurs 65 million years ago, mammals became the dominant terrestrial life form on our planet. Roaming the

earth were spectacular beasts such as saber-toothed cats, giant mastodonts, immense ground sloths, and gigantic giraffe-like rhinoceroses. Here is the ultimate illustrated field guide to the lost world of these weird and wonderful prehistoric creatures. A woolly mammoth probably won't come thundering through your vegetable garden any time soon. But if one did, this would be the book to keep

on your windowsill next to the binoculars. It covers all the main groups of fossil mammals, discussing taxonomy and evolutionary history, and providing concise accounts of the better-known genera and species as well as an up-to-date family tree for each group. No other book presents such a wealth of new information about these animals—what they looked like, how they behaved, and

how they were interrelated. In addition, this unique guide is stunningly illustrated throughout with full-color reconstructions of these beasts—many never before depicted—along with photographs of amazing fossils from around the world. Provides an up-to-date guidebook to hundreds of extinct species, from saber-toothed cats to giant mammoths. Features a wealth of color illustrations,

including new reconstruction s of many animals never before depicted Demonstrates evolution in action—such as how whales evolved from hoofed mammals and how giraffes evolved from creatures with short necks Explains how mass extinctions and climate change affected mammals, including why some mammals grew so huge Albion's Seed Smithsonian Prehistoric Zone

Lone Survivors: How We Came to Be the Only Humans on Earth By Chris Stringer How to Build a Habitable Planet Houghton Mifflin Harcourt Learn about machines the fun way! The Magic School Bus meets The Way Things Work in this kid-friendly guide to understanding the basics of simple machines, perfect for budding engineers. The Invention Hunters travel

the globe in their flying museum collecting the world's greatest inventions! Today they've landed in a construction zone. These silly scientists think they've stumbled on incredible specimens of everything you'd never find at a building site, from roller skates and pogo sticks to swords and race cars. But what they really discover--with a kid as their guide--is how simple machines like

pulleys, cranks, and levers are used to engineer tools ranging from jackhammers to dump trucks...and even toilets! Using simple explanations and diagrams and a heaping helping of humor, the *Invention Hunters* make the perfect companions for curious kids who are ready to learn about science, physics, engineering, history, and more.

That's No Dino! Abrams Award-winning author Don

Brown explores the history of vaccines from smallpox to COVID-19 in this installment of the *Big Ideas That Changed the World* series *A Shot in the Arm!* explores the history of vaccinations and the struggle to protect people from infectious diseases, from smallpox—per haps humankind's greatest affliction to date—to the COVID-19 pandemic. Highlighting deadly

diseases such as measles, polio, rabies, cholera, and influenza, Brown tackles the science behind how our immune systems work, the discovery of bacteria, the anti-vaccination movement, and major achievements from Lady Mary Wortley Montagu, who popularized inoculation in England, and from scientists like Louis Pasteur, Antonie van Leeuwenhoek, and Edward Jenner, the "father of immunology."

Timely and fascinating, *A Shot in the Arm!* is a reminder of vaccines' contributions to public health so far, as well as the millions of lives they can still save. *Big Ideas That Changed the World* is a graphic novel series that celebrates the hard-won succession of ideas that ultimately changed the world. Humor, drama, and art unite to tell the story of events, discoveries, and ingenuity over time that

led humans to come up with a big idea and then make it come true. *Animal Breeding, Welfare and Society* Abrams This dynamic series takes readers into the thrilling and frightening world of prehistoric Earth. This volume, focused on the time period before dinosaurs lived, is filled with lush, vivid illustrations that portray the ocean life and the gigantic

insects that roamed the earth at that time, accompanied by a lively and informative narrative. Special features include timelines, labeled illustrations, and scaled illustrations. **Giant Sloth** Little, Brown Books for Young Readers Originally published in hardcover in 2016 by Simon & Schuster. **The War of the Worlds** Smithsonian Prehistoric Zone

Did you know that dinosaurs weren't the only prehistoric beasts on Earth? Even before the time when dinosaurs lived, there were many other incredible creatures, and some were even bigger and more terrifying than T. rex. Entelodonts had strong jaws designed to crush bones. Quetzalcoatlus was the largest ever flying creature—about the size of a fighter jet! And Dimetrodons were the first animals to have notched teeth for slicing through flesh. What would happen if these beasts came back to life? Imagine these prehistoric predators facing off against tigers, bears, and wolves—and learn all about the terrifying creatures of the past!
