International law is a
system of laws governing
state-to-state interactions.
Individuals and
international institutions

are two most active and
important components of
modern international law,
yet this archaic definition
leaves them out,
indicating how far the
field has gone.
Furthermore, viewing
international law as a
collection of rules is no
longer accurate; rather, it
is a continuously growing
complex of rules, and
impactful not actively

binding—principles,
practices, and claims, all
of which are linked to
highly complicated
processes and structures.
International law, in its
clearest connotation,
provides normative
standards, techniques,
mechanisms, and a
shared conceptual
language to international
players, initially sovereign
nations, However,

multinational organizations and people are becoming more prevalent. Human rights, commercial and economic issues, space law, and international organizations have all emerged as topics and players intimately connected with international law, extending beyond conventional questions of war, peace, and diplomats. Even though international law is a legal system rather than an ethical one, ethical notions and issues,

particularly human rights, have had a significant influence on it. International law distinguishes itself from “international comity, which consists of legally nonbinding practices accepted by governments out of politeness (e.g., the saluting of the flags of foreign warships at sea)”. Furthermore, the field of conflict of laws, or private international law, is distinct from “the study of international law, or public international law, which is concerned with the rules of municipal

law—as international lawyers refer to the domestic law of states—of various countries where foreign elements are involved”

In his new book, *Poverty and Progress: Realities and Myths about Global Poverty*, renowned development economist Deepak Lal draws on 50 years of experience around the globe to describe developing-country realities and rectify misguided notions

about economic progress. Unique among books that have emerged in recent years on world poverty, *Poverty and Progress* directly confronts intellectual fads of the West and dismantles a wide range of myths that have obscured an astounding achievement: the unprecedented spread of economic progress around the world that is eliminating the scourge of mass poverty.

Liberal intellectuals and

political leaders have been slow to articulate a grand strategy informed by liberal values for confronting global terrorism. This book outlines the framework of a liberal strategy, and exposes the costs of the neo-conservative alternative that has driven US foreign policy since 9/11.

This edited book highlights the potential and actual contributions of the sustainable management and utilization of indigenous biological resources and environment for the development of Africa. The book centers on documenting current trends and issues in the field of resource use and conservation with the view of emphasizing their benefits to the pursuit of development within the region. By documenting

the array of natural resources and environment in Africa, this book addresses the topical knowledge and understanding gaps that characterize conservation (rationale for sustainable resource exploration), utilization patterns, and conservation challenges including policy status, environmental threats, impacts of tourism, reduction in food resources, etc., and their effects on the sustainable development of Africa. Through an integrated approach, the book

focuses on below and above-ground biological resources and the diverse scales of environment that characterize Africa. This collection of works is very helpful for natural and social scientists, policymakers, strategists, researchers, government and non-government organizations, biodiversity and environmental managers, climate change scientists, practitioners, activists, conservationists, academics, ecologists, undergraduate and postgraduate students, and others who want to

learn about and understand the best way to use and protect Africa's resources and heritage sustainably. [Coping with Global Environmental Change, Disasters and Security](#) Springer Nature Challenging the Misconceptions of the United Nations: Promoting a Greater Understanding One Blog at a Time By: Michael C. Curtin, M.A., A compilation of Michael C. Curtin's, M.A., blog posts over a ten-year period, Challenging the Misconceptions of the

United Nations seeks to alter the negative narrative surrounding the United Nations. Not only does Curtin address present-day issues, but he paints a picture of the post-World War II time period when delegates at a San Francisco conference came together to form what we now call the United Nations. While looking into the past progress the UN has made, Curtin examines the current stigma against it and how its dismantlement, as some in the current US political

climate would like to see, could dramatically affect the welfare of millions worldwide. Curtin's message is powerful and addresses the importance of the world the UN assists, especially in light of the COVID-19 pandemic and to many vulnerable populations across the globe. While some would have us believe the UN is an outdated institution, with a global pandemic, climate change, global economic inequalities taking place in our current era, and refugees fleeing the violence of war, the

United Nations holds an even greater necessity now to the millions around the world who depend on their aid.

While indigenous peoples make up around 370 million of the world's population – some 5 per cent – they constitute around one-third of the world's 900 million extremely poor rural people. Every day, indigenous communities all over the world face issues of violence and

brutality. Indigenous peoples are stewards of some of the most biologically diverse areas of the globe, and their biological and cultural wealth has allowed indigenous peoples to gather a wealth of traditional knowledge which is of immense value to all humankind. The publication discusses many of the issues addressed by the Declaration on the Rights of Indigenous Peoples and is a cooperative effort of independent experts working with the

Secretariat of the Permanent Forum on Indigenous Issues. It covers poverty and well-being, culture, environment, contemporary education, health, human rights, and includes a chapter on emerging issues.

This updated Sixth Edition of *The Challenge of Politics* enables students to see how the subfields of political science converge around a set of crucial questions, such as "Can we as citizens and students articulate and defend a view of the good political life and its guiding political values?" "Can we bring political wisdom to bear on judgments about politics and public issues?" and "Can we develop a science of politics to help us understand significant

political phenomena—the empirical realities of politics?" Balancing lessons of classic and contemporary theory with contemporary politics and empirical study, the book equips students with the tools they need to explore the impact of philosophy and ideology, recognize major forms of government, evaluate empirical findings, and understand how policy issues directly affect people's lives. The updated Sixth Edition includes new material on the 2016 presidential

elections, the role of social media in politics, and an expanded discussion on the rise of populist movements. Give your students the SAGE edge! SAGE edge offers a robust online environment featuring an impressive array of free tools and resources for review, study, and further exploration, keeping both instructors and students on the cutting edge of teaching and learning. For more than 50 years, low-cost antimalarial drugs silently saved millions of lives and cured billions of debilitating infections. Today, however, these drugs no longer work against the deadliest form of malaria that exists throughout the world. Malaria deaths in sub-Saharan Africa are currently just over one million per year are rising because of increased resistance to the old, inexpensive drugs. Although effective new drugs called

"artemisinins" are available, they are unaffordable for the majority of the affected population, even at a cost of one dollar per course. *Saving Lives, Buying Time: Economics of Malaria Drugs in an Age of Resistance* examines the history of malaria treatments, provides an overview of the current drug crisis, and offers recommendations on maximizing access to and effectiveness of antimalarial drugs. The book finds that most people in endemic

countries will not have access to currently effective combination treatments, which should include an artemisinin, without financing from the global community. Without funding for effective treatment, malaria mortality could double over the next 10 to 20 years and transmission will intensify. National Academies Press An estimated 40 million people are modern-day slaves, more than ever before in human history. Long after slavery was officially abolished, the

practice not only continues but thrives. Whether they are women in electronics or apparel sweatshops, children in brick kilns or on cocoa farms, or men trapped in bonded labour working on construction sites, millions of people globally are forced to perform labour through coercion, intimidation or deceit. In a world of growing inequality and trade-offs between the haves and the have-nots, consumers, business and government are all part of the problem and the solution. While we

have all become accustomed to fast fashion and cheap consumer goods, the affordability of these commodities often comes at the price of human exploitation. Addressing Modern Slavery examines slavery in the modern world and outlines ways it can be stopped. 'Addressing Modern Slavery is essential reading for anyone committed to understanding and tackling the scourge of modern slavery in contemporary businesses

and supply chains.' — Fiona McGaughey, University of Western Australia 'Justine Nolan and Martijn Boersma have expertly confronted the tragic reality of modern slavery and show us how exploited men, women and children are harmed in global supply chains. A slave may be far away or in our immediate neighbourhood. The book is based on years of careful research and outlines steps we can all take to respond to modern slavery.' — Jennifer Burn, Professor,

NSW Interim Anti-Slavery Commissioner 'This is a hugely impressive book which builds a compelling argument as to why all organisations must work towards the elimination of modern slavery' — David Cooke, Managing Director, Konica Minolta 'The book should be a valuable resource for policymakers, business executives and civil society organisations alike, for it not only assesses the efficacy of existing regulatory initiatives and business practices, but also outlines what needs to

change to eliminate modern slavery.’ — Surya Deva, City University of Hong Kong ‘This book exposes both the need and the opportunities to drive reform on modern slavery, particularly on forced labor. From case studies around business practices to examples grounded in the lived experiences of workers, Addressing Modern Slavery presents a comprehensive overview of the issue and empowers us all with the information we need to act.’ — Amol Mehra,

Managing Director, Freedom Fund ‘Addressing Modern Slavery shines a light on the terrible human cost of our insatiable consumption. Pervasive labour exploitation is all too often forgotten in our emphasis on growth and GDP. This book is both a wake-up call and a powerful demonstration of how connectivity and collaboration can help us eradicate a systemic and urgent challenge.’ — Kumi Naidoo, Secretary General, Amnesty International

perilous challenges of our time--climate change, terrorism, poverty, and trafficking of drugs, guns, and people--the nations of the world seem paralyzed. The problems are too big for governments to deal with. Benjamin Barber contends that cities, and the mayors who run them, can do and are doing a better job than nations. He cites the unique qualities cities worldwide share: pragmatism, civic trust, participation, indifference to borders and sovereignty, and a democratic penchant for

networking, creativity, innovation, and cooperation. He demonstrates how city mayors, singly and jointly, are responding to transnational problems more effectively than nation-states mired in ideological infighting and sovereign rivalries. The book features profiles of a dozen mayors around the world, making a persuasive case that the city is democracy's best hope in a globalizing world, and that great mayors are already proving that this is so"--

 "At present, Corporate Social Responsibility (CSR) for some may not be more than an attitude. Can it be more? What degree of commitment can we reasonably expect of corporations in the struggle to eradicate poverty, promote human rights, halt climate change and reverse ongoing environmental destruction? It is not a question of power; more than half of the world's top 100 economies are corporations, not nation-

states. Whatever can be done to "fix" the world's problems, corporations are in the best position to do [it]."--Back cover. [Saving Lives, Buying Time](#)

The Third UN is the ecology of supportive non-state actors- intellectuals, scholars,

consultants, think tanks, NGOs, the for-profit private sector, and the media-that interacts with the intergovernmental machinery of the First UN (member states) and the Second UN (staff members of international secretariats) to formulate and refine ideas and decision-making at key junctures in policy processes. Some advocate for particular ideas, others help analyze or operationalize their testing and implementation; many thus help the UN 'think'.

While think tanks, knowledge brokers, and epistemic communities are phenomena that have entered both the academic and policy lexicons, their intellectual role remains marginal to analyses of such intergovernmental organizations as the United Nations.
