ELLIS MATHEWS

Plant Experiments MIT Press

The definitive biography of a physician, feminist, social reformer, educator, and one of the most influential, and controversial women of the 20th century. Maria Montessori effected a worldwide revolution in the classroom. She developed a new method of educating the young and inspired a movement that carried it into every corner of the world.

This is the story of the woman behind the public figure—her accomplishments, her ideas, and her passions. Montessori broke the mold imposed on women in the nineteenth century and forged a new one, first for herself and eventually for those who came after her. Against formidable odds she became the first woman to graduate from the medical school of the University of Rome and then devoted herself to the condition of children considered uneducable at the time. She developed a teaching method that enabled them to do as well as normal

children, a method which then led her to found a new kind of school—the Casa dei Bambini, or House of Children—which gained her worldwide fame and still pervades classrooms wherever young children learn. This biography is not only the story of a groundbreaking feminist but a vital chapter in the history of education. “Highly recommended for educators, parents, and moderate feminists who seek inspiration from one of the most accomplished women of this or any other age.”—Publishers Weekly
Biology Manual Routledge

An analysis of Maria Montessori's educational beliefs and methodology, this text also discusses her views on the important problems of education in the family and in the pre-school and school environments. In addition, it discusses religious education and its relationship to the child's natural development. The work also includes a valuable and succinct biography of Montessori, extracts from a wide range of her published writings, and an up-to-date bibliography.

The Discovery of the Child Lerner Publications™

This full color book offers clear and concise descriptions of the complete range of Montessori math materials combined with details of how the children use them. It is immensely valuable as a ready reference for all Montessori teachers; a text for Montessori teachers in training; an explanation for parents and administrators of how these ingenious materials enhance children's thinking, problem solving and brain development. Mr. Duffy is an experienced Montessori teacher who is now a teacher-trainer. 78 pages (soft cover) Illustrations by the author Photographs by Frida Azariand others

In this moving companion to the Caldecott Honor-winning *They All Saw a Cat*, Brendan Wenzel tells the story of a seemingly ordinary stone. But it isn't just a stone—to the animals that use it, it's a resting place, a kitchen, a safe haven...even an entire world. With stunning illustrations in cut paper, pencil, collage, and paint, and soothing rhythms that invite reading aloud, *A Stone Sat Still* is a gorgeous exploration of perspective, perception, sensory experience, color, size, function, and time, with an underlying environmental message that is timely and poignant. Once again Wenzel shows himself to be a master of the picture book form.

The Montessori Method Vermillion

A survey of the lineages of living things for teachers of elementary and middle school levels. It includes chapters on prokaryotes, protists, the fungus kingdom, animal kingdom, plant kingdom, and viruses, as well as an introduction to phylogenies (evolutionary tree diagrams) and how to

read them.

SuperSimple Biology Montessori Helper
The study of plant physiology includes the internal functions of plants. The material in this set of curricula is a broad introduction to what Maria Montessori believed children should know regarding the way plants work. Using 18 impressionistic charts, children are led to understand how plants function and how they are connected to all other living organisms on this planet. The concepts that many children have mastered through the presentation of the *Timeline of Life*, and botany nomenclature will be further reinforced through the discovery that all living things are governed by the same rules as the rest of the universe. Every organism is not only striving to survive and adapt to its environment but also is constantly attempting to better the environment for future generations. Our individual existence as human beings is connected to the natural task of plants converting sunlight into food. This set of materials includes: All 18 impressionistic charts (8.5" x 11") For large charts (13" x 19" see option below); Teacher's notes for presentation of each chart; Experiments

on plant physiology; Experiment write-ups; Answer Key.

Children of the Universe Sarah Wilson
 "We know we need to improve our traditional school system, both public and private. But how? More homework? Better-qualified teachers? Longer school days or school years? More testing? More funding? No, no, no, no, and no. Montessori Madness! explains why the incremental steps politicians and administrators continue to propose are incremental steps politicians and administrators continue to propose are incremental steps in the wrong direction. The entire system must be turned on its head. This book asks parents to take a look--one thirty-minute observation--at a Montessori school. Your picture of what education should look like will never be the same"--Back cover.

Montessori Assessment Playbook Lerner Publications™

More than 80 years ago, Maria Montessori recognized the importance of a child's earliest experiences in paving the way for educational and personal fulfillment. Ahead of her contemporaries she created a whole educational system for the pre-school years. In this book, the author

brings the Montessori method into the home. The book includes simple projects that fit into the normal daily routine of toddlers and young children. Starting with the home and gradually moving out into the local environment, each project shows how simple games and activities can provide the building blocks for language development, mathematics, science and arts and crafts, while stimulating the child's natural sense of curiosity and sense of fun.

The flower is the part of a plant that makes seeds or fruit. Readers will identify the main parts of a flower and learn about the process of pollination. Simple text and supportive photos and diagrams help students comprehend this important science concept.

Waseca Reading Program Harper Collins

Can we measure what we treasure? Can we build and sustain truly excellent schools focused on the ambitious goal of human flourishing? And can we hold ourselves accountable to the children and families we serve in ways that harness data to advance that goal? The National

Center for Montessori in the Public Sector says "yes"! The Montessori Assessment Playbook shows us how to do it. Organized around 33 discrete tools, the Playbook provides a clear and actionable scaffold for building an assessment protocol that captures compelling student outcomes, such as perseverance, compassion, and creativity, and that links those outcomes to the investments we make to classrooms and schools. Emphasizing both coherence and precision, the Montessori Assessment Playbook shows us how to develop and implement a comprehensive assessment framework focused on human flourishing and, just as important, why such a framework is urgently needed.

Lee (U. of Kansas) emphasizes the role of school psychologists as consultants, and one of this encyclopedia's goals is to

introduce non-specialists to the scope of psychology applied to education. It can also serve as a reference for practitioners and vocational counselors. For ease of use, the comprehensive contents are listed both alphabetically

Montessori Play & Learn Chronicle Books LLC

The Absorbent Mind was Maria Montessori's most in-depth work on her educational theory, based on decades of scientific observation of children. Her view on children and their absorbent minds was a landmark departure from the educational model at the time. This book helped start a revolution in education. Since this book first appeared there have been both cognitive and neurological studies that have confirmed what Maria Montessori knew decades ago.

Maria Montessori, 1870-1952, Italian physician and educator.

Biology Ravenio Books

To Educate the Human Potential is a thought-provoking work by Maria Montessori, the renowned Italian physician and educator. In this sequel to her earlier book, *Education for a New World*, Montessori delves into the needs of children beyond the age of six. She passionately argues that children, when equipped with a solid educational

foundation, can reach their full human potential. Montessori envisions a world where young learners are not only academically proficient but also well-rounded individuals, accustomed to exercising their will, judgment, and imagination.

Child of the World Barnes & Noble Publishing

A fantastic aid for coursework, homework, and test revision, this is the ultimate study guide to biology. From reproduction to respiration and from enzymes to ecosystems, every topic is fully illustrated to support the information, make the facts clear, and bring biology to life. For key ideas, "How it works" and "Look closer" boxes explain the theory with the help of simple graphics. And for revision, a handy "Key facts" box provides a summary you can check back on later. With clear, concise coverage of all the core biology topics, SuperSimple Biology is the perfect accessible guide for students, supporting classwork, and making studying for exams the easiest it's ever been.
