*Good Practices Guide for Bicycle Safety Education*

The purpose of this Guide is to serve as an informational resource for educators and other interested professionals in planning and developing bicycle safety education programs. The Guide examines 15 existing bicycle safety education programs in the United States and one from Canada. The Guide consists of the following three primary sections: (1) Case Studies - specific examples of how educators have developed bicycle safety programs; (2) Planning Your Program - describes lessons that can be learned from the bicycle safety education programs surveyed in six topic areas: funding your program, bicycle safety education and public schools, developing partnerships, alternative venues/subjects, evaluation methods, and publicity; and (3)

Conclusion - summarizes the major issues that should be considered when developing a bicycle safety education course.

### *Cycles*

This International Standard was developed in response to a demand throughout the world. The aim is to ensure that bicycles manufactured in compliance with this International Standard will be as safe as is practically possible. The tests are designed to ensure the strength and durability of individual parts as well as of the bicycle as a whole, demanding high quality throughout and consideration of safety aspects from the design stage onwards. The scope is limited to safety considerations, and has specifically avoided standardization of components.

If the bicycle is to be used on public roads, national regulations apply.
