History and Memory

SANCHEZ MELISSA

Phylogenetic Systematics Springer

The second edition of A Concise History of Brazil features a new chapter that covers the critical time period from 1990 to the present, focusing on Brazil's increasing global economic importance as well as its continued democratic development.

The Principle of Sustainability Routledge

In this brilliant meditation on conceptions of history, Le Goff traces the evolution of the historian's craft. Examining real and imagined oppositions between past and present, ancient and modern, oral and written history, History and Memory reveals the strands of continuity that have characterized historiography from ancient Mesopotamia to modern Europe.

Happy Campers 0 SB Flip BRILL

Phylogenetic Systematics, first published in 1966, marks a turning point in the history of systematic biology. Willi Hennig's influential synthetic work, arguing for the primacy of the phylogenetic system as the general reference system in biology, generated significant controversy and opened possibilities for evolutionary biology that are still being explored.

The Power of Habit Columbia University Press

Now fully revised, this acclaimed textbook efficiently links basic biochemistry with the day-to-day practice of medicine. You will learn basic science concepts and see them illustrated by clinical cases that describe patients you will likely encounter in your clinical training. You will also learn about the use of laboratory tests to diagnose and monitor the most important conditions. Brought to you in a thorough yet accessible manner, this new edition of Medical Biochemistry highlights the latest developments in regulatory and molecular biology, signal transduction, biochemistry and biomarkers of chronic disease, and bioinformatics and the '-omics'. It highlights the most important global medical issues: diabetes mellitus, obesity and malnutrition, cancer and atherosclerotic cardiovascular disease, and addresses the role of nutrition and exercise in medicine.

Featuring a team of expert contributors that includes investigators involved in cutting-edge research as well as experienced clinicians, this book offers a unique combination of research and clinical practice tailored to today's integrated courses. Read organ-focused chapters addressing the biochemistry of the bone, kidney, liver, lungs and muscle; and system-focused ones addressing the biochemistry of the immune and endocrine systems, neurochemistry and neurotransmission, and cancer

Companion to Literary Myths, Heroes and Archetypes

Cambridge University Press

A profusely illustrated, cross-referenced guide to more than a century of stylistic and conceptual revolution in art. Art in the modern era has come to be defined by its styles, schools, and movements. The three hundred discussed here provide an introduction and a guide to the major developments in Western painting, sculpture, architecture, and design during one of the most dynamic and exciting periods in art history. One hundred main entries are presented in broadly chronological order, from Impressionism in the nineteenth century to Earth Art, Sound Art, and Internet Art in the twenty-first. Two hundred supplementary entries provide fully cross-referenced summaries of essential styles and movements, tracing intriguing patterns of influence and development. A timeline shows at a glance how the evolution of art corresponds with historical events, providing a thorough overview of the entire period. A list of major international collections and carefully selected suggestions for further reading are given for all the main entries, and the comprehensive index features over 1,000 artists, architects, designers, impresarios, critics, collectors, and champions of modern art, linking the styles, schools, and movements with the people who created them. 266 illustrations, 159 in color.

World Development Report 2018 University of Illinois Press

Obesity, autism, mental health problems, IBS, allergies, auto-immunity, cancer. Does the answer to the modern epidemic of 'Western' diseases lie in our gut?

Serviços Bibliográficos da Livraria Portugal Fuescyl

First published in French in 1988, and in English in 1992, this

companion explores the nature of the literary myth in a collection of over 100 essays, from Abraham to Zoroaster. Its coverage is international and draws on legends from prehistory to the modern age throughout literature, whether fiction, poetry or drama. Essays on classical figures, as well as later myths, explore the origin, development and various incarnations of their subjects. Alongside entries on western archetypes, are analyses of non-European myths from across the world, including Africa, China, Japan, Latin America and India. This book will be indispensable for students and teachers of literature, history and cultural studies, as well as anyone interested in the fascinating world of mythology. A detailed bibliography and index are included. 'The Companion provides a fine interpretive road map to Western culture's use of archetypal stories.' Wilson Library Review 'It certainly is a comprehensive volume... extremely useful.' Times Higher Education Supplement

Libros en venta en Hispanoamérica y España Cambridge University Press

This book investigates how sustainability informs the universal principles used in domestic and international law. It calls for the acceptance of sustainability as a recognized legal principle which could be applied to the entire legal system rather than just environmental law and regardless of its international or domestic levels. To this end, the book makes a contribution to a theory of global law by discussing whether, as a universally shared concern, environmental protection and the principle of sustainability should contribute to the 'greening' of the fundamental principles of law and governance. The book will be a valuable resource for students, researchers and policy makers working in the areas of environmental law and governance.

Micrographia, Or, Some Physiological Descriptions of Minute Bodies Made by Magnifying Glasses HarperCollins UK

At one time, Hooke was a research assistant to Robert Boyle. He is believed to be one of the greatest inventive geniuses of all time and constructed one of the most famous of the early compound microscopes.

Life, the Science of Biology OUP Oxford

This pioneering graduate textbook provides readers with the

concepts and practical tools required to understand the maximum entropy principle, and apply it to an understanding of ecological patterns. Rather than building and combining mechanistic models of ecosystems, the approach is grounded in information theory and the logic of inference. Paralleling the derivation of thermodynamics from the maximum entropy principle, the state variable theory of ecology developed in this book predicts realistic forms for all metrics of ecology that describe patterns in the distribution, abundance, and energetics of species over multiple spatial scales, a wide range of habitats, and diverse taxonomic groups. The first part of the book is foundational, discussing the nature of theory, the relationship of ecology to other sciences, and the concept of the logic of inference. Subsequent sections present the fundamentals of macroecology and of maximum information entropy, starting from first principles. The core of the book integrates these fundamental principles, leading to the derivation and testing of the predictions of the maximum entropy theory of ecology (METE). A final section broadens the book's perspective by showing how METE can help clarify several major issues in conservation biology, placing it in context with other theories and highlighting avenues for future research.

La nueva edición de esta obra aborda la lectura crítica en el contexto clínico y los modelos de construcción de preguntas clínicas. Su parte central, más pragmática, se enfoca hacia cómo leer críticamente los estudios de tratamiento (ensayos clínicos aleatorios, revisiones sistemáticas), de diagnóstico (exactitud de las pruebas diagnósticas) y de pronóstico (estudios de cohortes y reglas de predicción clínica). En los capítulos finales se analizan las claves para la lectura de los modernos sumarios de evidencia y del uso de GRADE como instrumento para determinar la calidad de la evidencia y la fuerza de las recomendaciones en las guías de práctica clínica. Esta segunda edición incluye importantes novedades para recoger todos los cambios que se han producido en este ámbito en los últimos años y que son fundamentales para cubrir de manera adecuada las necesidades de los profesionales. Se incluyen dos nuevos capítulos: uno explica con detalle los fundamentos del diseño de datos en los registros específicos de pacientes y el otro se centra en la descripción de los estudios basados en modelos de integración de evidencia, un aspecto cada vez más presente en la investigación y con una clara aplicación

en la práctica clínica. El libro se orienta tanto a los profesionales de ciencias de la salud, como a los clínicos en formación (enfermeros, médicos de las especialidades médicas y quirúrgicas, fisioterapeutas, farmacéuticos, psicólogos, gestores clínicos) y en general profesionales que precisan de la evidencia publicada para fundamentar sus decisiones clínicas.

Fabre's Book of Insects World Bank Publications
NEW YORK TIMES BESTSELLER • This instant classic explores how we can change our lives by changing our habits. NAMED ONE OF THE BEST BOOKS OF THE YEAR BY The Wall Street Journal • Financial Times In The Power of Habit, award-winning business reporter Charles Duhigg takes us to the thrilling edge of scientific discoveries that explain why habits exist and how they can be changed. Distilling vast amounts of information into engrossing narratives that take us from the boardrooms of Procter & Gamble to the sidelines of the NFL to the front lines of the civil rights movement, Duhigg presents a whole new understanding of human nature and its potential. At its core, The Power of Habit contains an exhilarating argument: The key to exercising regularly, losing weight, being more productive, and achieving success is understanding how habits work. As Duhigg shows, by harnessing this new science, we can transform our businesses, our communities, and our lives. With a new Afterword by the author "Sharp, provocative, and useful."—Jim Collins "Few [books] become essential manuals for business and living. The Power of Habit is an exception. Charles Duhigg not only explains how habits are formed but how to kick bad ones and hang on to the good."—Financial Times "A flat-out great read."—David Allen, bestselling author of Getting Things Done: The Art of Stress-Free Productivity "You'll never look at yourself, your organization, or your world quite the same way."—Daniel H. Pink, bestselling author of Drive and A Whole New Mind "Entertaining . . . enjoyable . . . fascinating . . . a serious look at the science of habit formation and change."—The New York Times Book Review

Molecules Elsevier Health Sciences

This book brings together research and theory about 'New Learning', the term we use for new learning outcomes, new kinds of learning processes and new instructional methods that are both wanted by society and stressed in psychological theory in many countries at present. It describes and illustrates the differences as well as the modern versions of the traditional

innovative ideas.

Teaching Scientific Inquiry BRILL

Amino Acids Cambridge University Press

This volume addresses some of the most prominent questions in contemporary bioethics and philosophy of medicine: 'liberal' eugenics, enhancement, the normal and the pathological, the classification of mental illness, the relation between genetics, disease and the political sphere, the experience of illness and disability, and the sense of the subject of bioethical inquiry itself. All of these issues are addressed from a "continental" perspective, drawing on a rich tradition of inquiry into these questions in the fields of phenomenology, philosophical hermeneutics, French epistemology, critical theory and post-structuralism. At the same time, the contributions engage with the Anglo-American debate, resulting in a fruitful and constructive conversation that not only shows the depth and breadth of continental perspectives in bioethics and medicine, but also opens new avenues of discussion and exploration. For decades European philosophers have offered important insights into the relation between the practices of medicine, the concept of illness, and society more broadly understood. These interventions have generally striven to be both historically nuanced and accessible to non-experts. From Georges Canguilhem's seminal *The Normal and the Pathological*, Michel Foucault's lectures on madness, sexuality, and biopolitics, Hans Jonas's deeply thoughtful essays on the right to die, life extension, and ethics in a technological age, Hans-Georg Gadamer's lectures on *The Enigma of Health*, and more recently Jürgen Habermas's carefully nuanced interventions on the question of liberal eugenics, these thinkers have sought to engage the wider public as much as their fellow philosophers on questions of paramount importance to current bioethical and social-political debate. The essays contained here continue this tradition of engagement and accessibility. In the best practices of European philosophy, the contributions in this volume aim to engage with and stimulate a broad spectrum of readers, not just experts. In doing so the volume offers a showcase of the richness and rigor of continental perspectives on medicine and society.

Charles Darwin described Fabre as the 'Homer of insects'. This book is a collection of essays that Fabre wrote detailing his observations of all kinds of insects in his homeland of France. Though the subject matter might sound dull to a non-scientist, Fabre manages to combine real observation with folk-lore, storytelling and culture in an immensely readable way.

Portrays the structures of the substances that make up our everyday world.

[American Megafaunal Extinctions at the End of the Pleistocene](#) Random House

What are scientific inquiry practices like today? How should schools approach inquiry in science education? Teaching Science Inquiry presents the scholarly papers and practical conversations that emerged from the exchanges at a two-day conference of distinctive North American 'science studies' and 'learning science'scholars.

[Medicine's 10 Greatest Discoveries](#) Routledge

What has America done to protect its citizens from life-changing but common risks such as death of a family breadwinner, ill health, disability, involuntary unemployment, outliving retirement savings, and birth into a poor family? Each, in its own way, burdens—and possibly devastates—unlucky individuals and families both emotionally and financially. It is the rare life that is untouched by one or more of these six threats. How do our current policies affect taxation, spending, and the economy, as well as prospects for individual lives? What more might these policies do to protect Americans? Rich in stories, data, and analysis, Social Insurance by Theodore R. Marmor, Jerry L. Mashaw, and John Pakutka provides a strong intellectual foundation for understanding the history, economics, politics, and philosophy of America's most important social insurance programs. This insightful work provides a unifying vision of these programs' purposes and reminds us, amidst the confusing and often apocalyptic rhetoric, why we have the programs and policies we do, while arguing for reforms that preserve and

enhance the protections in place.

[Discourse and Knowledge](#) Teaching Scientific Inquiry

This richly illustrated book is the most authoritative account of life in medieval Europe between the fall of the Roman Empire and the coming of the Renaissance. Full coverage is given to all aspects of life in a thousand-year period which saw the creation of western civilization: from the empires and kingdoms of Charlemagne, the Byzantines, and the Hundred Years War, to the ideas of the Crusades; the building of great cathedrals and the social catastrophe of the Black Death; the cultural worlds of chivalric knights, popular festivals, and new art forms. The chapters show the movement of the centre of gravity in European life from the Mediterranean to the north; and the authors explore the contrast between Byzantine and Renaissance cultures in the south and the new, complex political and social structures of north-west Europe, which by 1300 had the most advanced civilization the world had ever seen. Over 200 illustrations, including 24 colour plates, amplify the text; and the picture is completed with comprehensive reference material including maps, genealogies, and a full chronology.
