 This Selected Issues paper analyzes the impact of the adoption of inflation targeting (IT) on exchange rate volatility in Russian Federation. Russia has seen an increase in exchange rate volatility during the past few years compared with the period before the global financial crisis, as the authorities have chosen to allow a higher degree of ruble exchange rate flexibility in preparation for the adoption of IT. The average of the 12-month coefficient of variation of the ruble/dollar exchange rate has also increased from 2.2 percent in December 2005–September 2008 to about 3.7 percent in March

2010–June 2013.

 Paul Wilmott on Quantitative Finance, Second Edition provides a thoroughly updated look at derivatives and financial engineering, published in three volumes with additional CD-ROM. Volume 1: Mathematical and Financial Foundations; Basic Theory of Derivatives; Risk and Return. The reader is introduced to the fundamental mathematical tools and financial concepts needed to understand quantitative finance, portfolio management and derivatives. Parallels are

drawn between the respectable world of investing and the not-so-respectable world of gambling. Volume 2: Exotic Contracts and Path Dependency; Fixed Income Modeling and Derivatives; Credit Risk In this volume the reader sees further applications of stochastic mathematics to new financial problems and different markets. Volume 3: Advanced Topics; Numerical Methods and Programs. In this volume the reader enters territory rarely seen in textbooks, the cutting-edge research. Numerical methods are also introduced so that the models can now all be accurately and quickly solved. Throughout the volumes, the author has included numerous Bloomberg screen dumps to illustrate in real terms the points he raises, together with essential Visual Basic code, spreadsheet explanations of the models, the reproduction of term sheets and option classification tables. In addition to the practical orientation of the book the author himself also appears throughout the book—in cartoon form, readers will be relieved to hear—to personally highlight and explain the key sections and issues discussed. Note: CD-ROM/DVD and other supplementary materials are not included as part of eBook file.

In many respects 2014 marked the transition from strong recovery to promising growth for Dubai. With many exciting projects in the pipeline, not least the hosting of Expo 2020, the emirate is continuing to build on its reputation as a dynamic and international centre for business. Already a regional and global centre for business and finance, Dubai's reputation has been bolstered by the MSCI's decision to upgrade the UAE from frontier to emerging market status in 2014, while the emirate's successful Expo 2020 bid is expected to generate myriad opportunities for private investors across a range of sectors. Construction is thriving once again, driven in large part by strong retail sector growth, with various projects, including plans for the world's largest mall, indicating that the sector will maintain its position as the emirate's biggest GDP contributor moving forward. The transport and logistics framework is set for major expansion in the coming years as well, furthering cementing the emirate's status as a leading transport and logistics hub not just regionally, but globally too. The continued development of Dubai's retail and hospitality offerings, alongside the upgrades to its airports, should help to ensure robust growth in visitor numbers from both the region and further afield.

What makes a magazine in South Africa promote Scandinavian unity among its immigrant readers and why does a Swedish king endorse attempts to influence pan-Scandinavian opinion through a transnational media event in Sweden, Norway and Denmark? Can portraits of exotic Lapplanders in the British press, enthusiastic accounts of the welfare state in post-war travel literature and descriptions of the liberal Nordic woman as a metaphor for a freer society in Franco Spain really be bundled together under a joint label of 'Nordicness'? How is it that despite the variety of images of the Nordic region that are circulating, we still find this recurring idea of a shared Nordic identity? These are some of the questions the current volume seeks to answer. Covering the time period from the early nineteenth century up until the present and encompassing case studies from Britain, Spain, Poland, and South Africa, as well as from the Nordic countries, contributors to the volume investigate the images that have been presented of the Nordic region in the media in and outside of the Nordic countries, how such images have been shaped by mechanisms of mediation, and the channels through which they have been distributed. The chapters address both specific cases such as media events and individual publications, as well as the structural and institutional settings for mediating the Nordic region.

During the last decade, the Latin American and Caribbean region has experienced unprecedented natural resources abundance. This book highlights how transparency can help realize the benefits and reduce negative externalities associated with the extractive industries in the region. A central message is that high-quality and well-managed information is critical to ensure the transparent and effective governance of the sector. The insights from experiences in the region can help policymakers design and implement effective regulatory reforms

and adopt international standards that contribute to this goal. This is particularly important at a time when the recent boom experienced by extractives in the region may be coming to an end.

Capacity remuneration mechanisms (or simply capacity mechanisms) have become a fact of life in member states' energy markets and are one of the hottest topics in the wider European regulatory debate. Concerned about the security of electricity supply, national governments are implementing subsidy schemes to encourage investment in conventional power generation capacity, alongside already heavily subsidized renewable energy sources. With the increasingly connected European electricity markets, the introduction of a capacity mechanism in one country not only tends to distort its national market but may also have unforeseeable consequences for neighbouring electricity markets. As these mechanisms are adopted by member states with limited supra-national coordination as well as consideration for the cross-border impact, they tend to cause serious market distortions and put the future of the European internal electricity market at risk. This second edition will take stock of how capacity mechanisms have actually worked so far and consider the consequences they have for the European internal electricity market. It will include a detailed overview of national capacity mechanisms, their implications for the EU internal market, and will outline the nature of market failures which are likely to occur in the European electricity markets. This edition is intended to serve as a point of reference for regulators and policy-makers on how to design optimal capacity mechanisms in Europe. It will be an invaluable resource for anyone interested in energy market design, regulation, and competition issues.

The synchronized disinflation across Europe since end-2011 raises the question of whether non-euro area EU countries are affected by the undershooting of the euro area inflation target. To shed light on this issue, we estimate an open-economy, New Keynesian Phillips curve, in which we control for imported inflation. Regression results suggest that falling food and energy prices have been the main disinflationary driver. But low core inflation in the euro area has also had a clear and significant impact. Countries with more rigid exchange-rate regimes and higher share of foreign value added in domestic demand have been more affected. The

scope for monetary response to low inflation in non-euro area EU countries depends on concerns about financial stability and unanchoring of inflationary expectations, as well as on exchange rate regime and capital flows dynamics.

In the last few years, the Competition Commission of India has been extremely assertive in its enforcement outlook, especially in the digital markets. Additionally, the relevance of competition law in India continues to grow in importance as investment activity increases. This comprehensive, practical guide outlines the highly distinctive manner in which competition law is interpreted in this major global market. Highlighting the key aspects of Indian competition law, a leading competition law practitioner describes elements of Indian competition law encompassing the following: the dual regulatory-judicial nature of the Competition Commission; investigatory powers of the Commission's Director General; mandated business conduct policies (e.g., active risk management procedures); availability of sanctions, remedies, and private actions; cartels and leniency programmes; extraterritorial application of the Competition Commission; merger review; pricing and non-pricing abuse; approach in digital markets; appeal process; fines - companies, directors and officers; fines for non-cooperation or furnishing false information; and liability of state-owned enterprises. Analysis of numerous leading cases decided by the Indian competition authorities enhances the book's practical value. This comprehensive guide provides an incomparable overview of practice in a key jurisdiction that is increasingly becoming one of the most important in the international recognition and enforcement of competition law. As a guide to the 'landscape' of competition law in India, it has no peers. The book will be of inestimable value to professionals in this area of legal practice, whether in law firms, corporations, academia, government or the judiciary, as well as to investors, economists and business executives.

An invaluable Book dealing with United Nations Convention Against Corruption (UNCAC), in force from December 2005, including its evolution, and related UN Convention Against Transnational Organize Crime. UNCAC - is an international legal instrument dealing with combating fraud, corruption and economic crime in public and private sectors,

including political leaders and lackeys. Author discloses the formation of International Association of Anti-Corruption Authorities (IAACA), in Beijing in October 2006, with Inaugural Address by Chinese President, Hu Jintao. IAACA promotes and facilitates implementation globally of UNCAC, supported by United Nations Office on Drugs & Crime (UNODC). He reveals his endeavours to combat fraud, corruption and economic crime, prior to UNCAC. He demonstrates that whilst fraud and corruption, as endorsed by international research, is a major issue confronting people, how political leaders stride to power exploiting their anguish by committing to combat fraud and corruption, but once in power get bogged down in the quagmire of fraud and corruption, peddled by their lackeys, financing them. Disclosing real instances, he demonstrates how countries, having ratified UNCAC, are not honouring its obligations, but blatantly violating with impunity its obligations; he highlights dire need for international endeavour to deal with political leaders, pillaging and plundering the resources of people plunging them into abject poverty, as crimes against humanity. SAARC leaders acknowledge people in Asia are enslaved in abject poverty, and propound prosperity is not monopoly of a few, but are not committed to combat fraud and corruption. He reveals how World Bank and international agencies pontificate on combating fraud and corruption, but continue to fraternize with fraudulent and corrupt miscreants, demonstrating that mere rhetoric, only subverts UNCAC - an indispensable handbook for those combating fraud, corruption and economic crime.

The oil and gas industry's wide international exposure and constantly changing landscape leave it particularly vulnerable to disputes. As this practical book demonstrates, the risks associated with disputes can be mitigated by parties utilising governing law and dispute resolution clauses in contractual agreements within the sector. Examining a global range of jurisdictions, the book offers clear guidance on the most appropriate choice of law and choice of dispute resolution forum for oil and gas contracts, analysing the key issues and defining the legal contours involved.

Monty and Tyler Take the Top Road is a delightful, true story of a horse named Monty and his canine friend, Tyler. Monty, a beautiful Dales Cross Cob, and Tyler, a pedigree black Labrador, achieved 'fame' in the media in the summer of 2005 due to a special and unusual skill they mastered. The story, told through the eyes of the dog, Tyler, demonstrates a tender and trusting bond between the animals, as well as the patience of their fun-loving owner who playfully encourages Monty and Tyler to develop a talent born entirely by chance. Monty and Tyler were the beloved pets of Corporal Sarah Louise Bryant (Ne Feely), a soldier of the Intelligence Corps of the British Army, who was killed in action in Afghanistan on 17th June, 2008. Sarah had often suggested to her father, Des Feely, that the true-life adventures of Monty and Tyler would make a fun and amusing book for children and adults alike. It was this recollection that inspired Mr. Feely to put pen to paper during the months after his daughter's death, which has resulted in a moving and amusing story, lovingly written in memory of Sarah. The book is complemented by more than 40 colour photographs, bringing the true adventures of Monty and Tyler to life, while revealing the joy they brought to Sarah and her family. It is hoped that the book's success will enable Mr. Feely to make donations to various charities that support veterans of war.

Wrecking Ball explores, in an unprecedented manner, a decalogue of wicked problems that confronts humanity: Nuclear proliferation, climate change, pandemics, permanent technological unemployment, Orwellian public and private surveillance, social media that distorts reality, cyberwarfare, the fragmentation of democracies, the inability of nations to cabin private power, the failure of multinational institutions to promote collaboration and the deepening of autocratic rule in countries that have never known anything but extractive institutions. Collectively, or even severally, these wicked problems constitute crises that could end civilisation. Does this list frighten you, or do you blithely assume that tomorrow will be just like yesterday? Wrecking Ball shows that without an inclusive system of global governance, the collective action required to solve those wicked problems falls beyond the remit of the world's 20 inclusive democracies, 50 flawed democracies and 130 extractive, elitist autocracies. Flawed democracies

and autocracies that already struggle to produce goods necessary for their own citizens to flourish, are simply incapable of committing to international arrangements that address the existential threats posed by the decalogue of wicked problems. This then is our children's inheritance: Dystopias far, far worse than the polities that we ourselves have known. What, if anything, can mitigate the harms that are our legacy? Wrecking Ball offers, as an answer, a ground-breaking analysis of South Africa's political economy. It demonstrates that this country's elitist and extractive political and economic institutions not only make resolution of

ongoing domestic crises unattainable, likewise, they make meaningful responses to wicked problems impossible. Smart people think they have all the answers. Without laboring under any such illusions, Martin Luther King Jr eloquently opined: 'The arc of the moral universe is long, but it bends towards justice.' But what will happen, King would acidly ask, if we continue to dawdle, and simply run out of time? Wrecking Ball simialarly operates under no such 'smart' pretenses, and undeterred and unmatched ventures into terrains traversed by truly great political economists: Smith, Ricardo, Marx and

Keynes. By knitting together what we all know to be the facts, with cutting edge theory in economics, sociology, history and political science, the book paints an unflinching portrait of where we are, and where we are headed. Are we ready to be honest with ourselves about the likely future of this overheated, overpopulated planet?
