For more than 40 years, Computerworld has been the leading source of technology news and information for IT influencers worldwide. Computerworld's award-winning Web site (Computerworld.com), twice-monthly publication, focused conference series and custom research form the hub of the world's largest global IT media network.

Army Automation Jorge Carrillo Viveros

Modern software systems increasingly use commercial-off-the-shelf (COTS) software products as building blocks. In some cases, major software systems are assembled with virtually no custom code in the system. The use of COTS software products as components offers the promise of rapid delivery to end users, shared development costs with other customers, and an opportunity for expanding mission or business capabilities and performance as improvements are made in the commercial marketplace. Few organizations today can afford the resources and time to replicate market-tested capabilities. Yet, the promise of COTS products is too often not realized in practice. There have been more failures than successes in using COTS software products. The research and software practitioner communities have been working with COTS-based software systems for a number of years. There is now sufficient documented experience in the community to collect, analyze, and disseminate success stories, common failings, lessons-learned, and research advances. The mounting experience shows that the effective use of COTS

software products in major software systems demands new skills, knowledge, and abilities, changed roles and responsibilities, and different techniques and processes. The International Conference on COTS-Based Software Systems (ICCBSS) focuses on the challenges of building and maintaining systems that incorporate COTS software products. The conference sponsors, the National Research Council Canada, the Software Engineering Institute, and the University of Southern California Center for Software Engineering, aim to bring together managers, developers, maintainers, and researchers to share their expertise and experience.

To understand what we know and be aware of what is to be known has become the central focus in the treatment of CAD/CAM issues. It has been some time since we began treating issues arriving from engineering data handling in a low key fashion because of its housekeeping chores and data maintenance aspects representing nonglamorous issues related to automation. Since the advent of CAD/CAM, large numbers of data bases have been generated through standalone CAD systems. And the rate of this automated means of generating data is rapidly increasing; this is possibly the key factor in changing our way of looking at engineering data related problems. As one deeply involved with engineering data handling and CAD/CAM applications, I know that to succeed, we must do our homework: tracking the trends, keeping abreast of new technologies, new applications, new companies and products that are exploding on the scene every day. In today's fast-paced information handling

era, just keeping up is a full-time job. That is why ATI has initiated these publications, in order to bring to the users some of the information regarding their experiences in the important fields of CAD/CAM and engineering data handling. This volume contains some of the paper, including revisions, which were presented at the Fifth Automation Technology Conference held in Monterey, California. A series of publications has been initiated through cooperation between ATI and the Kluwer Academic Publishers. The first volume was *Advances in Engineering Data Handling-Case Studies*.

Fundamentals for Factors: How You Can Make Large Returns in Small

Receivables, introduces the reader to the basic concepts of factoring. Fundamentals describes what factoring is, how it works, businesses which can benefit, the remarkable returns possible, risks involved, and how to minimize those risks. It helps the reader define the meaning of "success," whether factoring is an appropriate move for his or her circumstances, and closes with a look at four small factors who enter the field from very diverse backgrounds, with quite different purposes.
