Handbook of Burns Volume 1 CRC Press

An authoritative and comprehensive review of the most important clinical issues facing critically ill neurologic and neurosurgical patients. The authors provide pertinent basic, clinical, diagnostic, and management guidelines for all the conditions commonly encountered in the neurocritical care unit, including the management of autonomic disorders that require critical care, postoperative management, and endovascular treatment. The authors also discuss the latest developments in the monitoring of different body systems, emphasizing the management of cardiorespiratory complications and other medical conditions that may threaten the patient's life. Also detailed are the concepts of intracranial physiology and current neuromonitoring techniques, subjects whose understanding is basic to effective management of critically ill neurologic patients. Numerous tables, figures, diagrams, and radiographs simplify and explicate both the diagnostic and therapeutic processes.

General Surgical Operations is a highly-praised and comprehensive textbook of operative surgery. It is a practical manual aimed at the surgeon who is about to carry out an operation, rather than just a description of the principles suitable for an examiner. This book is aimed primarily at a trainee studying for the UK and Ireland Intercollegiate FRCS and equivalent examinations around the world. It is, however, also intended as a vade mecum for a trained surgeon anywhere, who is about to carry out an infrequently performed procedure, perhaps in emergency conditions. It will therefore serve as a useful reference manual for every surgeon. This is a 'What to do' book. Using it the reader can aspire to gain diagnostic, decision making and operative surgical competence with confidence.

The global center of gravity in life sciences innovation is rapidly shifting to emerging economies. In *The New Players in Life Science Innovation*, Tomasz Mroczkowski explains how China and other new economic powers are rapidly gaining leadership positions, and thoroughly assesses the implications. Mroczkowski discusses the sophisticated innovation strategies and reforms these nations have implemented: approaches that don't rely on market forces alone, and are achieving remarkable success. Next, he previews the emerging global "bio-economy," in which life science discoveries will be applied pervasively in markets ranging from health to fuels. As R&D in the West becomes increasingly costly, Mroczkowski introduces new options for partnering with new players in the field. He thoroughly covers the globalization of clinical trials, showing how it offers opportunities that go far beyond cost reduction, and assessing the unique challenges it presents. Offering examples from China to Dubai to India, he carefully assesses the business models driving today's newest centers of innovation. Readers will find up-to-date coverage of bioparks, technology zones, and emerging clusters, and realistic assessments of global R&D collaboration strategies such as those of Eli Lilly, Merck, Novartis, and IBM. With innovation-driven industries increasingly dominating the global economy, this book's insights are indispensable for every R&D decision-maker and investor.

This is the 8th edition of the `reigning classic' of orthopaedic textbooks, Apley's System of Orthopaedics & Fractures. Building on a 30 year tradition, this new edition will continue to be the essential reference for those seeking to understand the structure and function of the musculoskeletal system, its diseases, and its response to trauma. Louis Solomon, who was Alan Apley's co-author on the previous two editions, has been joined by two new co-authors to develop and extend this foundation and produce a thoroughly modern textbook of orthopaedic surgery. The book has been brought completely up-to-date and extended to cover current orthopaedic practice. Many new illustrations have been added and the new easy-to-read page layout now features colour throughout. As in previous editions, the book is divided into three sections: General Orthopaedics, Regional Orthopaedics, and Fractures and Joint Injuries. Information is provided on pathophysiology, biology and molecular genetics as well as on general principles, diagnosis and management.
