This is my story of going through lower surgery, specifically phalloplasty, and the adventures I have with my changing genitals along the way. Welcome to my journey." **#1 NEW YORK TIMES BESTSELLER** • The twentieth anniversary edition of the classic story of an incredible group of students and the teacher who inspired them, featuring updates on the students' lives, new journal entries, and an introduction by Erin Gruwell. Now a public television documentary, *Freedom Writers: Stories from the Heart*. In 1994, an idealistic first-year teacher in Long Beach, California, named Erin Gruwell confronted a room of "unteachable, at-risk" students. She had intercepted a note with an ugly racial caricature and angrily declared that this was precisely the sort of thing that led to the Holocaust. She was met by uncomprehending looks—none of her students had heard of one of the defining moments of the twentieth century. So she rebooted her entire curriculum, using treasured books such as Anne Frank's diary as her guide to combat intolerance and misunderstanding. Her students began recording their thoughts and feelings in their own diaries, eventually dubbing themselves the "Freedom Writers." Consisting of powerful entries from the students' diaries and narrative text by Erin Gruwell, *The Freedom Writers Diary* is an unforgettable story of how hard work, courage, and determination changed the lives of a teacher and her students. In the two decades since its original publication, the book has sold more than one million copies and inspired a major motion picture *Freedom Writers*. And now, with this twentieth-anniversary edition, readers are brought up to date on the lives of the Freedom Writers, as they blend indispensable takes on social issues with uplifting stories of attending college—and watch their own children follow in their footsteps. *The Freedom Writers Diary* remains a vital read for anyone who believes in second chances.

*It's Not Just the Facts* When it comes to climate change, this truly is a golden age—of fake news, post-truths, pluralistic ignorance, conspiracy theories, a willfully ignorant administration, and the Cranky Uncle. You know him. We all have one. That exasperating Thanksgiving blusterer digs in his heels even as the foundation of his denial thaws faster than the Arctic ice caps. Written and illustrated by Dr. John Cook, cognitive psychologist and founder of the award-winning website *Skeptical Science*, *Cranky Uncle* combines humor and science to make clear, calm, and winnable arguments in the public controversy of climate change. Can we change our Cranky Uncle's mind? Probably, regrettably, not. But Dr. Cook makes it easier for us to understand him. And armed with this knowledge, prevent climate misinformation from spreading further.

Many of the concepts and terminology surrounding modern causal inference can be quite intimidating to the novice. Judea Pearl presents a book ideal for beginners in statistics, providing a comprehensive introduction to the field of causality. Examples from classical statistics are presented throughout to demonstrate the need for causality in resolving decision-making dilemmas posed by data. Causal methods are also compared to traditional statistical methods, whilst questions are provided at the end of each section to aid student learning.

**Rockerboy** McGraw Hill Professional

A concise and self-contained introduction to causal inference, increasingly important in data science and machine learning. The mathematization of causality is a relatively recent development, and has become increasingly important in data science and machine learning. This book offers a self-contained and concise introduction to causal models and how to learn them from data. After explaining the need for causal models and discussing some of the principles underlying causal inference, the book teaches readers how to use causal models: how to compute intervention distributions, how to infer causal models from observational and interventional data, and how causal ideas could be exploited for classical machine learning problems. All of these topics are discussed first in terms of two variables and then in the more general multivariate case. The bivariate case turns out to be a particularly hard problem for causal learning because there are no conditional independences as used by classical methods for solving multivariate cases. The authors consider analyzing statistical asymmetries between cause and effect to be highly instructive, and they report on their decade of intensive research into this problem. The book is accessible to readers with a background in machine learning or statistics, and can be used in graduate courses or as a reference for researchers. The text includes code snippets that can be copied and pasted, exercises, and an appendix with a summary of the most important technical concepts.

Buteyko Meets Dr. Mew Crown

**How I Unblocked My 5 Blocked Arteries** MIT Press

This is the story of how I unblocked my 90%+ blocked arteries in 2013. My cardiologist and Cardiac surgeon recommended open heart bypass surgery. I found the bypass surgery very invasive and feared that the blockages might recur. So, I scoured through the medical literature to find a solution which could reverse my heart blockages permanently. I found it! Basically the theory for my program was from the following four books and Dr Linus Pauling megavitamin C therapy concept. They are as follows: 1) "NO to Heart Diseases" by Dr Ignarro, Noble Prize for Medicine 1998 2) "Reversing Heart disease" by Dr Dean Ornish Strong Indian influence: Vegetarian food + Yoga 3) "Prevent and Reverse Heart Disease" by Dr Esselstyn : Vegan diet 4) "The China Study" by Dr Colin Campbell & Thomas Campbell. : Vegan diet Books 2,3 & 4 essentially talked about how a vegetarian diet can prevent and reverse heart diseases by itself. It did not mention L Arginine at all. Dr Ignarro did mention that a vegetarian diet helped but you could also indulge in a bit of meat/fish. He thought that L-Arginine could do the job by itself. For academic purity, they insisted on mutual exclusivity. My interest was to clear the blockages in my heart and not on academic purity. So I combined both their theories and come out with the WONG KAM LUEN'S Program for unblocking my 5 blocked arteries. The book detailed my agonising journey and the readings and tests I took along the journey. At the end, you could say that I have succeeded! The angiogram said so! I have also summarised my experiences and suggested a shorter way to achieve my results. From my results, you can surmise that within three months on my program, you will definitely see vast improvements on your blood pressure, lipid levels and general well being. I hope that you can learn something from my journey and achieve the same miracle for yourself.

In June 2007, the FBI informed the NBA that one of its referees, Tim Donaghy, was the subject of a probe into illegal gambling. Within months, the public knew the broad outlines of a scheme involving Donaghy betting on games he officiated with a co-conspirator, longtime Donaghy acquaintance and professional gambler Jimmy "Baba" Battista. They were joined in the scandal by a mutual childhood friend, Tommy Martino. By November 2008, each man had pleaded guilty to charges relating to the conspiracy, and was in federal prison. The story was over. Or so it seemed to be. Author Sean Patrick Griffin, Ph.D., a former Philadelphia Police officer turned university professor and best-selling author, conducted dozens of interviews and obtained betting records, referee statistics, court documents, and unique access to witness statements and confidential law enforcement files. Jimmy Battista's remarkable decades-long bookmaking and betting career is examined, including and especially his role as architect of the widely publicized scandal. This book assists novice and experienced teachers in each of these fields to develop a teaching framework that incorporates simulation. The *Manual of Simulation in Healthcare, Second Edition* is fully revised and updated. New material includes a greater emphasis on patient safety, interprofessional education, and a more descriptive illustration of simulation in the areas of education, acute care medicine, and aviation. Divided into three sections, it ranges from the logistics of establishing a simulation and skills centre and the inherent problems with funding, equipment, staffing, and course development to the considerations for healthcare-centred simulation within medical education and the steps required to develop courses that comply with 'best practice' in medical education. Providing an in-depth understanding of how medical educators can best incorporate simulation teaching methodologies into their curricula, this book is an invaluable resource to teachers across all medical specialties.
