Why are students today not learning biology, appreciating its importance in their lives, or pursuing it as a career? Experts believe dismal learning experiences in biology classes are causing the vast majority of students to miss information that could help them lead healthier lives and make more intelligent decisions as adults. How can we improve the teaching of biology throughout the school curriculum? Fulfilling the Promise offers a vision of what biology education in our schools could be—along with practical, hard-hitting recommendations on how to make

that vision a reality. Noting that many of their recommended changes will be controversial, the authors explore in detail the major questions that must be answered to bring biology education to an acceptable standard: how elementary, middle, and high-school biology education arrived at its present state; what impediments stand in the way of improving biology education; how to properly prepare biology teachers and encourage their continuing good performance; and what type of leadership is needed to improve biology education.

This open access book sets out the stress-system model for functional somatic symptoms in children and adolescents. The book begins by exploring the initial encounter between the paediatrician, child, and family, moves through the assessment process, including the formulation and the treatment contract, and then describes the various forms of treatment that are designed to settle the child's dysregulated stress system. This approach both provides a new understanding of how such symptoms emerge – typically, through a history of recurrent or chronic stress, either physical or psychological – and points the way to effective assessment, management, and treatment that put the child (and family) back on the road to health and well-being.

This volume is a collection of chapters all contributed by individuals who have presented their ideas at conferences and who take moderate stands with the use of animals in research. Specifically the chapters bear of the issues of: notions of the moral standings of animals, history of the methods of argumentation, knowledge of the animal mind, nature and value of regulatory structures, how respect for animals can be converted from theory to action in the laboratory. The chapters have been tempered by open discussion with individuals with different opinions and not audiences of true believers. It is the hope of all, that careful consideration of the positions in these chapters will leave reader with a deepened understanding--not

necessarily a hardened position.

Designed for beginning teachers, this text introduces the teacher as "reflective decision maker," responsible for planning, implementing, evaluating, and making management decisions in the classroom. Each chapter considers a particular teaching skill—first discussing the theory behind it, and then presenting the reader with practice situations in which knowledge about the skill can be applied and evaluated. The Eighth Edition continues to address the importance of core INTASC standards, and highlights developing issues including the "Digital Divide," the use of personal digital assistants (PDAs) in and outside of the classroom, cooperative learning, and dealing with behavioral issues. Core INTASC standards are addressed in regard to each chapter's objectives. A correlation table between chapter and standard is located on the inside front cover of the text to facilitate documentation of where and how INTASC standards are addressed. New! Marginal notations appear throughout the text to call-out key concepts and assist students with comprehension and review. New! Two-color design helps to organize the information more clearly for students. Chapter 10 focuses on assessment and includes extended discussion of rubrics with additional examples, as well as a new section on electronic portfolios. Chapter 9 has been revised to include a focus on cooperative learning and other strategies brought back from the Sixth Edition of Classroom Teaching Skills. Chapter 8 focuses on issues of behavior management in the classroom, including parental involvement and the role of record-keeping in resolving

behavioral issues. Chapter 7: Teaching and Learning with Technology, has been completely updated. Among the topics covered are the "Digital Divide"—using personal digital assistants in and outside of the classroom, micro media and simulation technology, and new productivity tools for teachers. The opening chapters have an increased emphasis on decision making, teaching models, and determining one's own teaching goals.

You'll learn not only how to accommodate students with special needs but also how to make every student a partner in safer science. Classroom veterans themselves, the authors have organized the book with practicality in mind. Safety concepts are discussed in the context of common situations in real classrooms. Sidebars and inserts in every chapter highlight and reinforce important material. Key information is selectively repeated in different chapters so you won't have to flip back and forth.
