**A poetical translation of the works of Horace, with the original text, and critical notes collected from his best Latin and French commentators ... By the Revd. Mr. Philip Francis .. The third edition** Bolchazy-Carducci Publishers

This book investigates relations between humans and animals over several centuries with a focus on the Middle Ages, since important features of our perceptions regarding animals have been rooted in that period. Elucidating various aspects of medieval human-animal relationships requires transdisciplinary discourse, and so this book aims to reconcile the materiality of animals with complex cultural systems illustrating their

subtle transitions 'between body and mind'.

The Natural History of Animals Bolchazy-Carducci Publishers

Aristotle's *De Animalibus* was an important source of zoological knowledge for the ancient Greeks and for medieval Arabs and Europeans. In the thirteenth century, the work was twice translated into Latin. One translation was produced directly from the Greek by William of Moerbeke. An earlier translation, made available as a critical edition in the present volume for the first time, was produced through an intermediary Arabic translation (*Kitāb al-Ḥayawān*) by Michael Scot (1175 - c. 1232). Scot's translation was one of the main sources of knowledge on animals in Europe and widely used until well into the fifteenth century. As a faithful translation of a translation produced by a Syriac-speaking Christian, the text contributes to our knowledge of Middle Arabic. The *De Animalibus* is composed of three sections: *History of Animals* (ten books), *Parts of Animals* (four books) and *Generation of Animals* (five books). *Parts of Animals* and *Generation of Animals* were published by BRILL as Volumes 5.2 and 5.3 of the book

series ASL in 1998 (ASL 5.2) and 1992 (ASL 5.3). The present Volume 5.1.a contains the first section of Scot's translation of *History of Animals*: the general introduction and books 1-3, with Notes. Editions of the two concluding parts of *History of Animals*, ASL 5.1.b, books 4-6 and ASL 5.1.c, books 7-10, are in preparation. Complete Latin-Arabic and Arabic-Latin indices of *History of Animals* will be published in due course.

"Latin for the New Millennium, Levels 1 and 2 is a complete introductory course to the Latin language, suitable for both high school and college students, consisting of two volumes, each accompanied by a teacher's manual and students' workbooks. The strategy employed for teaching and learning incorporates the best of both the reading approach and the more abstract grammatical method. The

choice of vocabulary in each chapter reflects ancient authors commonly studied for the AP Latin examinations. There are exercises designed for oral use, as well as a substantial core of more conventional exercises in each chapter. The readings, pictures, and supplementary inserts on cultural information illuminate Roman life, civilization, Roman history, and mythology, as well as the continuing use of Latin after antiquity and its vigorous literary tradition in such periods as the Middle Ages and Renaissance. Each chapter also includes derivatives, the influence of Latin vocabulary on English, and selected proverbs or common Latin sayings. Latin for the New Millennium Level 3 builds on the strong foundation of Levels 1 and 2 and provides students an in-depth experience of Caesar, Catullus, Cicero, Horace, Ovid, and Vergil as well as of the Renaissance writer Erasmus. This text provides students an introduction to unadapted Latin literature and builds their literary analysis skills."--adapted from publisher website.

This volume makes available for the first time to the scholarly world the version of Aristotle's "Parts of Animals" that has long been one of the main sources of knowledge in Europe on the subject. Being a faithful translation of a translation

produced by a Syriac-speaking Christian, the text also contributes to our knowledge of Middle Arabic.

*Latin* Plutarch's Three Treatises on Animals

This volume offers a new translation of Plutarch's three treatises on animals—On the Cleverness of Animals, Whether Beasts Are Rational, and On Eating Meat—accompanied by introductions and explanatory commentaries. The accompanying commentaries are designed not only to elucidate the meaning of the Greek text, but to call attention to Plutarch's striking anticipations of arguments central to current philosophical and ethological discourse in defense of the position that non-human animals have intellectual and emotional dimensions that make them worthy of inclusion in the moral universe of human beings. Plutarch's Three Treatises on Animals will be of interest to students of ancient philosophy and natural science, and to all readers who wish to explore the history of thought on human-non-human animal relations, in which the animal treatises of Plutarch hold a pivotal position.
